Economies Of China And India, The: Cooperation And Conflict (In 3 Volumes) Agarwal Manmohan,Wang Jing,2016-12-29 China and India, the two largest developing countries, are developing rapidly both inside themselves and towards global markets. Are these two economies dual or dueling? This 3-volume set tries to answer this question by providing comprehensive analyses scoping varied economic issues. This volume set covers both China's and India's strategies and objectives in international governance, their bilateral and multilateral trade agreement negotiations, financial liberalization, growth prospects, rural development and agriculture, income distribution, labor market mechanism, manufacturing and competitiveness upgrading, as well as environmental and other social issues. The set collects papers (most unpublished until now) written

by Chinese and Indian researchers who have rich experiences and strong backgrounds in policy analyses and are well connected to Chinese and Indian policy makers. Thus, these papers contain valuable first-hand information about China's and India's development strategies. This makes this volume set an essential source of reference for China–India comparisons and studies. 0Readership: Students, researchers, and academics who are interested in the interactions between and the dynamics of two of the world's largest economies. China, India, Economic Development, Comparison, Competitiveness0 Radio Age ,1927

Spectral Atlas for Amateur Astronomers Richard

Walker,2017-07-20 Featuring detailed commented spectral profiles of more than one hundred astronomical objects, in colour, this spectral guide documents most of the important and spectroscopically observable objects accessible using typical amateur equipment. It allows you to read and interpret the recorded spectra of the main stellar classes, as well as most of the steps from protostars through to the final stages of stellar evolution as planetary nebulae, white dwarfs or the different types of supernovae. It also presents integrated spectra of stellar clusters, galaxies and quasars, and the reference spectra of some terrestrial light sources, for calibration purposes. Whether used as the principal reference for comparing with your recorded spectra or for inspiring independent observing projects, this atlas provides a breathtaking view into our Universe's past. The atlas is accompanied and supplemented by Spectroscopy for Amateur Astronomers, which explains in detail the methods for recording, processing, analysing and interpreting your spectra.
