Perspectives on Data Science for Software Engineering Tim Menzies, Laurie Williams, Thomas Zimmermann, 2016-07-14 *Perspectives on Data Science for Software Engineering* presents the best practices of seasoned data miners in software engineering. The idea for this book was created during the 2014 conference at Dagstuhl, an invitation-only gathering of leading computer scientists who meet to identify and discuss cutting-edge informatics topics. At the 2014 conference, the concept of how to transfer the knowledge of experts from seasoned software engineers and data scientists to newcomers in the field highlighted many discussions. While there are many books covering data mining and software engineering basics, they present only the fundamentals and lack the perspective that comes from real-world experience. This book offers unique insights into the wisdom of the community's leaders gathered to share hard-won lessons from the trenches. Ideas are presented in digestible chapters designed to be applicable across many domains. Topics included cover data collection, data sharing, data mining, and how to utilize these techniques in successful software projects. Newcomers to software engineering data science will learn the tips and tricks of the trade, while more experienced data scientists will benefit from war stories that show what traps to avoid. Presents the wisdom of community experts, derived from a summit on software analytics Provides contributed chapters that share discrete ideas and technique from the trenches Covers top areas of concern, including mining security and social data, data visualization, and cloud-based data Presented in clear chapters designed to be applicable across many domains

Always On Rory Cellan-Jones,2021-05-13 'Delightfully insightful and intensely readable [...] There is an energy and drama to Rory's writing which nonetheless leaves space for us, the reader, to make up our minds' – Stephen Fry The inside story of how tech became personal and pernicious, from the BBC's technology correspondent. We live at a time when billions have access to unbelievably powerful technology. The most extraordinary tool that has been invented in the last century, the smartphone, is forcing radical changes in the way we live and work - and unlike previous technologies it is in the hands of just about everyone. Coupled with the rise of social media, this has ushered in a new era of deeply personal technology, where individuals now have the ability to work, create and communicate on their own terms, rather than wait for permission from giant corporations or governments. At least that is the optimistic view. This book takes readers on an entertaining ride through this turbulent era, as related by an author with a ringside seat to the key moments of the technology revolution. We remember the excitement and wonder that came with the arrival of Apple's iPhone with all the promise it offered. We see tech empires rise and fall as these devices send shockwaves through every industry and leave the

corporate titans of the analogue era floundering in their wake. We see that early utopianism about the potential of the mobile social revolution to transform society for the better fade, as criminals, bullies and predators poison the well of social media. And we hear from those at the forefront of the tech revolution, including Stephen Hawking, Elon Musk, Tim Berners-Lee, Martha Lane-Fox and Jimmy Wales, to gain their unique insights and predictions for what may be to come. Always On immerses the reader in the most important story of our times – the dramatic impact of hyperconnectivity, the smartphone and social media on everything from our democracy to our employment and our health. The final section of the book draws on the author's own personal experience with technology and medicine, considering how COVID-19 made us look again to computing in our battle to confront the greatest challenge of modern times.

technologies and their global usage trends. The Swiss Confederation tasked the Cyber-Defence Campus (CYD Campus) to identify the 38 most relevant encryption and data protection technologies, analyze their expected evolution until 2025, and derive implications for the military, civil society, and economy sectors. Fifty experts from academia, government, and industry have contributed to this study and provided their viewpoints on the different technologies and trends.
