Application Analysis Tools for ASIP Design Kingshuk Karuri, Rainer Leupers, 2011-06-15 This book introduces a novel design methodology which can significantly reduce the ASIP development effort through high degrees of design automation. The key elements of this new design methodology are a powerful application profiler and an automated instruction-set customization tool which considerably lighten the burden of mapping a target application to an ASIP architecture in the initial design stages. The book includes several design case studies with real life embedded applications to demonstrate how the methodology and the tools can be used in practice for accelerating the overall ASIP design process.

Critical Code National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee for Advancing Software-Intensive Systems Producibility, 2010-10-27 Critical Code contemplates Department of Defense (DoD) needs and priorities for software research and suggests a research agenda and related actions. Building on two prior books—Summary of a Workshop on Software Intensive Systems and Uncertainty at Scale and Preliminary Observations on DoD Software Research Needs and Priorities—the present volume assesses the nature of the national investment in software research and, in particular, considers ways to revitalize the knowledge base needed to design, produce, and employ software-intensive systems for tomorrow's defense needs. Critical Code discusses four sets of questions: To what extent is software capability significant for the DoD? Is it becoming more or less significant and strategic in systems development? Will the advances in software producibility needed

by the DoD emerge unaided from industry at a pace sufficient to meet evolving defense requirements? What are the opportunities for the DoD to make more effective use of emerging technology to improve software capability and software producibility? In which technology areas should the DoD invest in research to advance defense software capability and producibility?

Carbon Risk and Green Finance Aaron Ezroj, 2020-12-28 As the world plans for economic recovery following the global COVID-19 pandemic, major economies are looking to comprehensive strategies for addressing carbon risks and identifying green finance opportunities. Since Bank of England Governor Mark Carney and Michael Bloomberg began tackling climate change as a financial concern, the international financial community has been developing sophisticated analytical tools that will enable the success of comprehensive efforts to address carbon risks and identify green finance opportunities. This timely publication offers a cutting-edge analysis of the financial aspects of climate change. It discusses the most important analytical tools, their origin, how they work, where they can go, and how they fit into a larger strategy. First, reporting frameworks can allow companies to see how well they are addressing carbon risks, in particular with respect to the recommendations of the Task Force on Climate-related Financial Disclosures. Second, by quantifying how much greenhouse gas companies emit into the atmosphere as a direct or indirect result of their operations, carbon footprint calculations can help identify carbon risks with particular companies, especially within supply chains. Third, brown taxonomies can help investors identify

current carbon risks by classifying fossil fuel assets in a systematic manner. Fourth, green taxonomies can help investors identify current green finance opportunities by classifying sustainable activities in a systematic manner. Fifth, scenario analysis for assets can help investors identify future carbon risks and green finance opportunities. Finally, stress testing for liabilities can help insurers and banks address future carbon risks and better inform policymakers. Scholars, policymakers, and business professionals will find this book informative. They will gain a comprehensive understanding of the analytical tools supporting efforts to address carbon risks and identify green finance opportunities. This will hopefully make these individuals more successful in their personal endeavors to build a more sustainable and resilient economy for future generations.
