Sustainable Value Chain Management François Maon, Sankar Sen, 2016-04-01 The way organizations manage their value chain has changed dramatically over the past decade. Today, organizations take account of economic issues, but they also adopt a broader perspective of their purpose including social and environmental issues. Yet despite its global spread, sustainable value chain management remains an uncertain and poorly defined ambition, with few absolutes. The social and environmental issues that organizations should address easily can be interpreted as including virtually everything. Current literature on the topic seeks to understand the effects and management of initiatives dealing with diversity, human rights, safety, philanthropy, community, and environment. However, the penetration of social and environmental considerations into value chain management is described as 'desire lacking reality' thereby making the idea a patchy success. The objective of this research anthology is to investigate different angles of sustainable value chain management. The book's 27 chapters fill holes and explore new fields; the chapters are organised in five sections: Sustainable value chains - context, drivers, and barriers; Sustainable value chains - managing activities; Sustainable value chains - managing networks

and collaboration; Sustainable value chains - integrative perspectives; and Sustainable value chains - specific sectorial and industry perspectives.

**Agile and Lean Office** Ade Asefeso MCIPS MBA, 2012-08-14 Agile and lean office are so deeply interwoven that if you are doing agile you are doing lean, and vice-versa. Those considering process change will likely find the description of the interrelatedness interesting and enlightening. The question should I use Lean office instead of Agile office is based on a false premise because office environments are complex systems. There can be thousands of integration points as information flows along a value stream. As a result it is almost impossible to understand in detail how a change to one part of a value stream will impact the rest of the system-wide value streams of the organization. The Agile and Lean office approach use a program of continuous performance improvement. This approach does not try to accomplish too much at once and risk complete failure, but to make an incremental change to a value stream, wait for the system to settle down, fully understand the system-wide impact of the changes, and then decide what new change to make.

**Making Global MBAs** Andrew Orta, 2019-10-01 A generation of aspiring business managers has been taught to see a world of difference as a world of opportunity. In Making Global MBAs, Andrew Orta examines the culture of contemporary business education, and the ways MBA programs participate in the production of global capitalism through the education of the business subjects who will be managing it. Based on extensive field research in several leading US business schools, this groundbreaking ethnography exposes what the culture of MBA training says about contemporary understandings of capitalism in the context of globalization. Orta details the rituals of MBA life and the ways MBA curricula cultivate both habits of fast-paced technical competence and “softer” qualities and talents thought to be essential to unlocking the value of international cultural difference while managing its risks. Making Global MBAs provides an essential critique of neoliberal thinking for students and professionals in a wide variety of fields.
