Desert Navigator Rüdiger Wehner, 2020-02-04 Winner of the Association of American Publishers PROSE Award for Excellence in Biological and Life Sciences A world-renowned researcher of animal behavior reveals the extraordinary orienteering skills of desert ants, offering a thrilling account of the sophisticated ways insects function in their natural environments. Cataglyphis desert ants are agile ultrarunners who can tolerate near-lethal temperatures when they forage in the hot midday sun. But it is their remarkable navigational abilities that make these ants so fascinating to study. Whether in the Sahara or its ecological equivalents in the Namib Desert and Australian Outback, the Cataglyphis navigators can set out foraging across vast expanses of desert terrain in search of prey, and then find the shortest way home. For almost half a century, Rüdiger Wehner and his collaborators have devised elegant experiments to unmask how they do it. Through a lively and lucid narrative, Desert Navigator offers a firsthand look at the extraordinary navigational skills of these charismatic desert dwellers and the experiments that revealed how they strategize and solve complex problems. Wehner and his team discovered that these insect navigators use visual cues in the sky that humans are unable to see, the Earth's magnetic field, wind direction, a step counter, and panoramic "snapshots" of landmarks, among other resources. The ants combine all of this information to steer an optimal course. At any given time during their long journey, they know exactly where to go. It is no wonder these nimble and versatile creatures have become models in the study of animal navigation. Desert Navigator brings to light the marvelous capacity and complexity found in these remarkable insects and shows us how mini brains can solve mega tasks.

Travel Writing from Black Australia Robert Clarke, 2015-11-19 Over the past thirty years the Australian travel experience has been 'Aboriginalized'. Aboriginality has been appropriated to furnish the Australian nation with a unique and identifiable tourist brand. This is deeply ironic given the realities of life for many Aboriginal people in Australian society. On the one hand, Aboriginality in the form of

artworks, literature, performances, landscapes, sport, and famous individuals is celebrated for the way it blends exoticism, mysticism, multiculturalism, nationalism, and reconciliation. On the other hand, in the media, cinema, and travel writing, Aboriginality in the form of the lived experiences of Aboriginal people has been exploited in the service of moral panic, patronized in the name of white benevolence, or simply ignored. For many travel writers, this irony - the clash between different regimes of valuing Aboriginality - is one of the great challenges to travelling in Australia. Travel Writing from Black Australia examines the ambivalence of contemporary travelers' engagements with Aboriginality. Concentrating on a period marked by the rise of discourses on Aboriginality championing indigenous empowerment, self-determination, and reconciliation, the author analyses how travel to Black Australia has become, for many travelers, a means of discovering 'new'—and potentially transformative—styles of interracial engagement.

The Subjective Self Harwood Fisher, 2001-01-01 For all their strides in understanding how we create and think about cultures, psychologists, linguists, and logicians have had difficulty explaining how we conceive our selves?how the self can, in fact, be both the object and the subjective originator of its surroundings. Harwood Fisher's purpose in this far-reaching, interdisciplinary book is to depict the subjective self in its true complex duality. In *The Subjective Self*, Fisher argues that the key to depicting both aspects of the self simultaneously and thus modeling it more holistically than before is to visualize the self in a logical space. From an origin point inside this space, the self tries out metaphors and launches categories to logically order what it wants, sees, and encounters. This is a creative cognitive process, metaphoric framing, by which the self invents new forms and depicts new organizations of its experiences, impressions, and information. It is also a generative linguistic process, bracketing, by which the self can step outside its own expressed thoughts, gain new levels of awareness, re-position itself as an agent responsible for its ideas and statements, and, in short, empower its own identity. The framing sets in motion versatile mental categories?forms that are projected into mental space, where they become objectified. The bracketing sets in motion the logical bounds of the I, stabilizing the individual's identity and giving thrust to the subjective self's dynamic causal role. In elaborating this theory, Fisher extends the ideas of Kurt Lewin, Jean Piaget, and C. S. Peirce, among others. By drawing on each of these thinkers, he is able to bring their common themes of perspective and construction together in his portrait of the self as a creative iconic space.
