Encyclopedia of Environmental Management, Four Volume Set Sven Erik Jorgensen, 2012-12-13 Winner of an Outstanding Academic Title Award from CHOICE Magazine Encyclopedia of Environmental Management gives a

comprehensive overview of environmental problems, their sources, their assessment, and their solutions. Through in-depth entries and a topical table of contents, readers will quickly find answers to questions about specific pollution and management issues. Edited by the esteemed Sven Erik Jørgensen and an advisory board of renowned specialists, this four-volume set shares insights from more than 500 contributors—all experts in their fields. The encyclopedia provides basic knowledge for an integrated and ecologically sound management system. Nearly 400 alphabetical entries cover everything from air, soil, and water pollution to agriculture, energy, global pollution, toxic substances, and general pollution problems. Using a topical table of contents, readers can also search for entries according to the type of problem and the methodology. This allows readers to see the overall picture at a glance and find answers to the core questions: What is the pollution problem, and what are its sources? What is the big picture, or what background knowledge do we need? How can we diagnose the problem, both qualitatively and quantitatively, using monitoring and ecological models, indicators, and services? How can we solve the problem with environmental technology, ecotechnology, cleaner technology, and environmental legislation? How do we address the problem as part of an integrated management strategy? This accessible encyclopedia examines the entire spectrum of tools available for environmental management. An indispensable resource, it guides environmental managers to find the best possible solutions to the myriad pollution problems they face. 2. Teilband Sylvain Auroux, E.F.K. Koerner, Hans-Josef

Niederehe, Kees Versteegh, 2008-07-14 Volume 2 treats, in great detail and, at times quite innovatively, the individual stages of development of the study of language as an autonomous discipline, from the growing awareness in 17th and 18th century Europe of genetic relationships among a host of languages to the establishment of comparative-historical Indo-European linguistics in the 19th century, from the generation of the Schlegels, Bopp, Rask, and Grimm to the Neogrammarians and the application of the comparative method to non-Indo-European languages from all over the globe. Typological linguistic interests, first synthesized by Humboldt, as well as the development of various other non-historical endeavours in the 19th and the first half of the 20th century, such as language and psychology, semantics, phonetics, and dialectology, receive ample attention.
