Surgical Pathology Dissection William H. Westra, Ralph H. Hruban, Timothy H. Phelps, Christina Isacson, 2013-03-14 Filling the need for a comprehensive, fully-illustrated guide to the subject, this practical manual demonstrates a logical approach to the preparation, dissection, and handling of the tissue specimens most commonly encountered in today's surgical pathology laboratory. Each dissection is vividly illustrated with powerful 3D line drawings created exclusively for this book. The authors discuss the clinically important features of various types of specimens and lesions over the whole range of organ systems. The consistent approach provides a valuable conceptual framework for points to bear in mind during the dissection and each chapter concludes with a convenient reminder of the important issues to address in the surgical pathology report. Indispensable for staff pathologists, residents, pathologist's assistants, histotechnologists and other laboratory personnel.

Introduction to Evolutionary Computing Agoston E. Eiben, J.E. Smith, 2013-03-14 The first complete overview of evolutionary computing, the collective name for a range of problem-solving techniques based on principles of biological evolution, such as natural selection and genetic inheritance. The text is aimed directly at lecturers and graduate and undergraduate students. It is also meant for those who wish to apply evolutionary computing to a particular problem or within a given application area. The book contains quick-reference information on the current state-of-the-art in a wide range of related topics, so it is of interest not just to evolutionary computing specialists but to researchers working in other fields.

Computational Homology Tomasz Kaczynski, Konstantin Mischaikow, Marian Mrozek, 2006-04-18 Homology is a

powerful tool used by mathematicians to study the properties of spaces and maps that are insensitive to small perturbations. This book uses a computer to develop a combinatorial computational approach to the subject. The core of the book deals with homology theory and its computation. Following this is a section containing extensions to further developments in algebraic topology, applications to computational dynamics, and applications to image processing. Included are exercises and software that can be used to compute homology groups and maps. The book will appeal to researchers and graduate students in mathematics, computer science, engineering, and nonlinear dynamics.

The Palestine Nakba Nur Masalha, 2012-08-09 2012 marks the 63rd anniversary of the Nakba - the most traumatic catastrophe that ever befell Palestinians. This book explores new ways of remembering and commemorating the Nakba. In the context of Palestinian oral history, it explores 'social history from below', subaltern narratives of memory and the formation of collective identity. Masalha argues that to write more truthfully about the Nakba is not just to practise a professional historiography but an ethical imperative. The struggles of ordinary refugees to recover and publicly assert the truth about the Nakba is a vital way of protecting their rights and keeping the hope for peace with justice alive. This book is essential for understanding the place of the Palestine Nakba at the heart of the Israel-Palestine conflict and the vital role of memory in narratives of truth and reconciliation.

Atkins' Physical Chemistry 11e Peter Atkins, Julio de Paula, James Keeler, 2019-08-20 Atkins' Physical Chemistry: Molecular Thermodynamics and Kinetics is designed for use on the second semester of a quantum-first physical chemistry course. Based on the hugely popular Atkins' Physical Chemistry, this volume approaches molecular thermodynamics with the assumption that students will have studied quantum mechanics in their first semester. The exceptional quality of previous editions has been built upon to make this new edition of Atkins' Physical Chemistry even more closely suited to the needs of both lecturers and students. Re-organised into discrete 'topics', the text is more flexible to teach from and more readable for students. Now in its eleventh edition, the text has been enhanced with additional learning features and maths support to demonstrate the absolute centrality of mathematics to physical chemistry. Increasing the digestibility of the text in this new approach, the reader is brought to a question, then the math is used to show how it can be answered and progress made. The expanded and redistributed maths support also includes new 'Chemist's toolkits' which provide students with succinct reminders of mathematical concepts and techniques right where they need them. Checklists of key concepts at the end of each topic add to the extensive learning support provided throughout the book, to reinforce the main take-home messages in each section. The coupling of the broad coverage of the subject with a

structure and use of pedagogy that is even more innovative will ensure Atkins' Physical Chemistry remains the textbook of choice for studying physical chemistry.

The Performance Economy W. Stahel, 2010-02-24

This updated and revised edition outlines strategies and models for how to use technology and knowledge to improve performance, create jobs and increase income. It shows what skills will be required to produce, sell and manage performance over time, and how manual jobs can contribute to reduce the consumption of non-renewable resources.

An Attributional Theory of Motivation and Emotion

Bernard Weiner, 2012-12-06 For a long time I have had the gnawing desire to convey the broad motivational significance of the attributional conception that I have espoused and to present fully the argument that this framework has earned a rightful place alongside other leading theories of motivation. Furthermore, recent investigations have yielded insights into the attributional determinants of affect, thus providing the impetus to embark upon a detailed discussion of emotion and to elucidate the relation between emotion and motivation from an attributional perspective. The presentation of a unified theory of motivation and emotion is the goal of this book. My more specific aims in the chapters to follow are to: 1) Outline the basic principles that I believe characterize an adequate theory of motivation; 2) Convey what I perceive to be the conceptual contributions of the perspective advocated by my colleagues and me; 3) Summarize the empirical relations, reach some definitive conclusions, and point out the more equivocal empirical associations based on hypotheses derived from our particular attribution theory; and 4) Clarify questions that have been raised about this conception and provide new material for still further

scrutiny. In so doing, the building blocks (if any) laid down by the attributional conception will be readily identified and unknown juries of present and future peers can then better determine the value of this scientific product.

Microwave Mobile Communications (An IEEE Press Classic Reissue) William C. Jakes, 1994-05-16 This is an IEEE classic reissue of the book published by John Wiley & Sons in 1974. This definitive text and reference covers all aspects of microwave mobile systems design. Encompassing ten years of advanced research in the field, it reviews basic microwave theory, explains how cellular systems work and presents useful techniques for effective systems development. Arthroscopic Laser Surgery Allen T. Brillhart, 2012-12-06 Arthroscopic Laser Surgery: Clinical Applications is designed to introduce the use of lasers to the orthopaedic surgeon who performs arthroscopic surgery and is the first text of its kind entirely devoted to the unification of these two exciting technologies. This groundbreaking work examines the following subjects: - the basic sciences of laser arthroscopy as well as the history of its development - techniques for arthroscopic laser applications in the knee, for carpal tunnel release, ankle, shoulder, and much more - practical, clinical guidelines on

its advantages, disadvantages, and complications - technical overview of the laser systems currently in use in the United States and worldwide - important safety measures and administrative issues - glossary of terms and reference sources. Each chapter is written by an arthroscopic laser surgeon distinguished in both his knowledge of the topic addressed as well as by his expertise with that specific laser arthroscopic system. Over 120 full-color illustrations enhance the presentation. The definitive text of arthroscopic laser surgery applications and technique, this volume is a must-have information source for all orthopaedic surgeons.

Non-State Actors in World Politics D. Josselin, W. Wallace, 2001-10-29 The involvement of non-state actors in world politics can hardly be characterised as novel, but intensifying economic and social exchange and the emergence of new modes of international governance have given them much greater visibility and, many would argue, a more central role. *Non-state Actors in World Politics* offers analyses of a diverse range of economic, social, legal (and illegal), old and new actors, such as the Catholic Church, trade unions, diasporas, religious movements, transnational corporations and organised crime.

Mathematical Biology James D. Murray, 2007-06-12 *Mathematical Biology* is a richly illustrated textbook in an exciting and fast growing field. Providing an in-depth look at the practical use of math modeling, it features exercises throughout that are drawn from a variety of bioscientific disciplines - population biology, developmental biology, physiology, epidemiology, and evolution, among others. It maintains a consistent level throughout so that graduate students can use it to gain a foothold into this dynamic research area.

Search Methodologies Edmund K. Burke, Graham

Kendall, 2013-10-18 The first edition of Search Methodologies: Introductory Tutorials in Optimization and Decision Support Techniques was originally put together to offer a basic introduction to the various search and optimization techniques that students might need to use during their research, and this new edition continues this tradition. Search Methodologies has been expanded and brought completely up to date, including new chapters covering scatter search, GRASP, and very large neighborhood search. The chapter authors are drawn from across Computer Science and Operations Research and include some of the world's leading authorities in their field. The book provides useful guidelines for implementing the methods and frameworks described and offers valuable tutorials to students and researchers in the field. "As I embarked on the pleasant journey of reading through the chapters of this book, I became convinced that this is one of the best sources of introductory material on the search methodologies topic to be found. The book's subtitle, "Introductory Tutorials in Optimization and Decision Support Techniques", aptly describes its aim, and the editors and contributors to this volume have achieved this aim with remarkable success. The chapters in this book are exemplary in giving useful guidelines for implementing the methods and frameworks described." Fred Glover, Leeds School of Business, University of Colorado Boulder, USA "[The book] aims to present a series of well written tutorials by the leading experts in their fields. Moreover, it does this by covering practically the whole possible range of topics in the discipline. It enables students and practitioners to study and appreciate the beauty and the power of some of the computational search techniques that are able to effectively navigate through search spaces that are sometimes inconceivably large. I am convinced that this second edition

will build on the success of the first edition and that it will prove to be just as popular.” Jacek Blazewicz, Institute of Computing Science, Poznan University of Technology and Institute of Bioorganic Chemistry, Polish Academy of Sciences
