Software Quality - ECSQ 2002 Jyrki Kontio,Reidar Conradi,2003-08-01 Software professionals and companies live in a new world today. Increasingly complex systems need to be built faster and cheaper. While many of the established approaches in software quality are still valid, the software quality community is going through a paradigm shift that requires a re-assessment of our current method and tool portfolio, as well as creating new and more effective solutions. We have selected two themes for this conference to highlight this paradigm shift. Our first theme, “production of attractive and reliable software at Internet speed” sums up the dilemma many software organisations face. In order to be competitive, software should contain advanced features and run reliably – yet it should be developed quickly and cost effectively for the right market window. Finding the right balance between these objectives is a critical question that will determine business success in the years to come. Our second theme, “production of software with a dynamic partnership network” highlights the current trend of using partnerships and subcontractors as integral players in the software development process. Partnerships sometimes need to be created quickly to respond to a market opportunity, yet the costs and speed of cooperation must be competitive. Different companies have different processes, quality tools and cultures, yet they should cooperate seamlessly for the best result.

Afghanistan Provincial Reconstruction Team Handbook United States United States Army,2011-02 This handbook is a guide to the Provincial Reconstruction Team (PRT) in Afghanistan. It contains part of the ISAF PRT Handbook as well as background information on each of the Provinces. There is also a chapter on the Tactical Conflict Assessment and Planning Framework currently used in Afghanistan. The Government of the Islamic Republic of Afghanistan is combating an insurgency and simultaneously rebuilding its infrastructure to become a strong sovereign state no longer requiring assistance from the U.S. government (USG) or other nations. Key to the success of this effort is the provincial reconstruction team (PRT). The U.S. Army established PRTs from a need to stabilize the operating environment by developing the infrastructure and building capacity necessary for the Afghan people to succeed in a post-conflict environment. By design, PRTs have grown into interagency and multinational teams in both organization and scope. PRTs have become an integral part of International Security Assistance Force's long-term strategy to transition the lines of security, governance, and economics to the Afghan people. As we look to the future we know the PRT effort will draw to a close and transition its efforts toward the provincial government. Until that event occurs and while it occurs it remains vital that new PRT personnel are familiar with the concepts, structure, and management of PRTs and the lessons learned and best practices established by their predecessors. This handbook focuses on Afghanistan PRTs; the information contained in this handbook comes from multiple sources inside and outside the USG with the understanding that the way PRTs operate has changed and evolved over time.

The Smart Nation Act Robert David Steele,2006-01-01 There are immediate benefits to both national security and national prosperity of creating a government-wide open source intelligence program--preferably not managed by the intelligence specialists, who have repeatedly demonstrated their complete disdain for open sources of information. Those benefits would include the provision of an insurance policy for intelligence coverage of Third World security issues; an immediate increase in the timeliness, coverage and political utility of overtly available information; an immediate increase in open source information sharing across the departments and with the private sector; and finally, the provision of a foundation for a web-based OSINT exchange with allies, other nations and international groups -- p.33
