These papers represent original research in computer graphics from around the world and cover areas such as: - Real-time computer animation - Image based rendering - Non photo-realistic rendering - Virtual reality - Avatars - Geometric and solid modelling - Computational geometry - Physically based modelling - Graphics hardware architecture - Data visualisation - Data compression The focus is on the commercial application and industrial use of computer graphics and digital media systems.

Mobile Cartography Tumasch Reichenbacher,2004 It established new concepts for mobile cartography and showed the differences, but also the similarities towards traditional cartography and web cartography. The main focus is on the elaboration of adaptive methods for visualisation of geographic information for mobile usage, i.e. on mobile devices. Adaptation takes place in the components such as the mobile user, his/her activities with associated goals, as well as the situation they are placed in. The usage scenarios described were helpful for the implementation of a rudimentary, prototypical adaptive geovisualisation service for mobile users. The service for the example of point symbol maps was implemented based on open-standard formats and served as a proof of concept. It basically demonstrates how a mobile client can send as Simple Object Access Protocol (SOAP) encoded context parameters to a web service

Real-Time Shading Marc Olano,John Hart,Wolfgang Heidrich,Michael McCool,2002-06-26 This book covers real-time shading systems, their design and how they work. Procedural shading, long valued for off-line rendering and production animation is now possible on interactive graphics hardware. These developments are important for areas such as game development, product design, and scientific visualization, among others. The authors include examples of techniques for achieving common effects efficiently in a real-time shading language ranging from full procedural shading on advanced specialized hardware to limited, yet surprisingly flexible shading on unextended OpenGL, to modern PC graphics accelerators.

Synthetic Actors Nadia Magnenat Thalmann,Daniel Thalmann,2012-12-06 This book presents the making of computer-generated films using three-dimensional synthetic actors. It is based mainly on the production of the film *Rendez-vous a Montreal*, an animated film that uses advanced computer techniques to achieve such effects as reincarnating film stars Humphrey Bogart and Marilyn Monroe. The main purpose of *Rendez-vous a Montreal* is to show that true synthetic actors can be created. This film represents a technological breakthrough which opens up new vistas in motion pictures, television, and advertising. With this technique, it will now be possible

to produce short films or motion pictures featuring any celebrity in any situation. The book explains in detail how such a film can be produced using numerous drawings and color pictures. In particular, the following topics are presented: - Preparation of object construction: documentation search, and plaster models preparation - Object construction: digitizing and modeling - Body animation - Hand animation and object grasping - Facial animation: expressions, phonemes and emotions - Choreography: decors, actors, cameras, and lights - Realism: colors, lights, shading, shadows, and textures - Image recording: special effects Finally, an extensive appendix describes in detail the HUMAN FACTORY system.

The Status of Social Studies Jeff Passe,Paul G. Fitchett,2013-10-01 A team of researchers from 35 states across the country developed a survey designed to create a snapshot of social studies teaching and learning in the United States. With over 12,000 responses, it is the largest survey of social studies teachers in over three decades. We asked teachers about their curricular goals, their methods of instruction, their use of technology, and the way they address the needs of English language learners and students with disabilities. We gathered demographic data too, along with inquiries about the teachers' training, their professional development experiences, and even whether they serve as coaches. The enormous data set from this project was analyzed by multiple research teams, each with its own chapter. This volume would be a valuable resource for any professor, doctoral student, or Master's student examining the field of social studies education. It is hard to imagine a research study, topical article, or professional development session concerning social studies that would not quote findings from this book about the current status of social studies. With chapters on such key issues as the teaching of history, how teachers address religion, social studies teachers' use of technology, and how teachers adapt their instruction for students with disabilities or for English language learners, the book's content will immediately be relevant and useful.

Hiring the Best Knowledge Workers, Techies & Nerds Johanna Rothman,2013-07-15 This is the digital version of the printed book (Copyright © 2004). Proven Methods for Attracting, Interviewing, and Hiring Technical Workers Good technical people are the foundation on which successful high technology organizations are built. Establishing a good process for hiring such workers is essential. Unfortunately, the generic methods so often used for hiring skill-based staff, who can apply standardized methods to almost any situation, are of little use to those charged with the task of hiring technical people. Unlike skill-based workers, technical people typically do not have access to cookie-cutter solutions to their problems. They need to adapt to any situation that arises, using their knowledge in new and creative ways to solve the problem at hand. As a result, one developer, tester, or technical manager is not interchangeable with another. This makes hiring technical people one of the most critical and difficult processes a technical manager can undertake. Hiring the Best Knowledge Workers, Techies & Nerds: The Secrets & Science of Hiring Technical People takes the guesswork out of hiring and diminishes the risk of costly hiring mistakes. With the aid of step-by-step descriptions and detailed examples, you'll learn how to write a concise, targeted job description source candidates develop ads for mixed media review résumés quickly to determine Yes, No, or Maybe candidates develop intelligent, nondiscriminatory, interview techniques create fool-proof phone-screens check references with a view to reading between the lines extend an offer that will attract a win-win acceptance or tender a gentle-but-decisive rejection and more An effective hiring process is crucial to saving an organization the costs and consequences of a bad hiring decision. Not only is a bad hire costly in terms of recruiting expenses and the time spent hiring, it can also bog down or derail projects that may already be running late. You, your team, and your organization will live with the long-term consequences of your hiring decision. Investing time in developing a hiring strategy will shorten your decision time and the ramp-up time needed for each new hire. Technical leaders, project and program managers, and anyone putting together a team of technical workers will greatly benefit from this book.
