Local Sustainable Urban Development in a Globalized World Dr Lauren C Heberle,Dr Susan M Opp,2012-11-28 'Sustainable development' is a key issue of concern to urban planners across the globe. How it is defined, implemented and measured at the local level remains highly contested and subject to a wide range of external cultural, political and economic pressures. Bringing together leading experts from North America, Europe, the Middle East and SE Asia, this book provides a timely overview of the various methods for understanding and implementing sustainable practices at local levels. In doing so, they present the wide range of local action alternatives available to planners that may be pursued in spite of the constraints generated by globalization processes and highlight the array of public policy options that could reduce the external pressures shaping the possible local alternatives. The book argues that, while local planners and local authorities are willing to act, many are unaware of the range of options available to them. In bringing together these case studies, not only diverse in geographic terms, but also reflecting very different levels of income, general population education, cultural norms, legal systems and government structures, it points out innovations and examples of best practice.

Export Product Quality, Renewable Energy, and Sustainable Production Umer Shahzad,Gagan Deep Sharma,Lianbiao Cui,John Mendy,2023-09-12 Economic development has long been acknowledged for its beneficial effects on human well-being. In the context of economic globalization and vertical specialization, increasing the quality of export products is more critical and necessary to export success and sustainable development. The product's quality is inextricably linked to its manufacture and production, which need various types of energy and raw materials. Meanwhile, the adoption of more environmentally friendly and cleaner energy sources contributes to the achievement of sustainable production. Therefore, product quality may provide a new perspective from which to investigate the systematic relationship between greener and renewable

energy sources, sustainable production and environmental regulations, as well as the nature of export competitiveness. Generally, export product quality has referred to the quality of manufactured products within the product lines. Quality refers to the relative price of a country's varieties within their respective product lines. Product sophistication assesses the composition of the aggregate exports. Different varieties of same product at per quality level are being produced by several developing and emerging economies. Within any given product line, quality converges both conditionally and unconditionally to the world's benchmark; increases in institutional quality and human capital are associated with faster quality upgrading. In turn, faster growth in quality is associated with more rapid output growth.

The Footprint of Polar Tourism Ricardo Mariano Roura, 2011 This thesis aims to describe and interpret the effects of tourism on historic sites in Antarctica and Svalbard (also known as Spitsbergen), and to assess the implications for management. Explorers, whalers, seal hunters, scientists and others have left many material remains in the Polar Regions that are significant because they tell the history of the exploration and exploitation of these regions. Contemporary polar tourism represents a new phase in this exploration and exploitation of the Polar Regions. The potential for the transformation of historic sites has increased following the substantial expansion of polar tourism in recent decades. Key cultural heritage sites are regularly included in standard tourist itineraries and are also the subject of specialized tourism. In this context, the central research question of this thesis is: What are the effects of tourism on polar historic sites, and what are the implications of this for the management of tourism and these historic sites?

Tourist Destinations Douglas G. Pearce, 2020-11-23 Destinations are a central feature of tourism and the focus of much tourism research. Destinations have been studied from diverse perspectives using multiple concepts and a range of approaches. As a result, destination research today has become increasingly fragmented as studies have become more specialized. There is a need for a more integrated approach, one which systematically draws together these different research threads to provide a comprehensive and coherent picture and a fuller understanding of

destinations, their structure and how they function. This book provides such a synthesis by critically reviewing a wide range of international research and incorporating in one volume many different facets of destinations from studies which have appeared in related but often divergent literatures. Conceptual and methodological issues are illustrated with empirical examples from Europe, North and South America, Asia and Oceania.

Tourism in the Green Economy Maharaj Vijay Reddy, Keith Wilkes, 2015-06-05 The concept of the green economy has now entered mainstream policy debates and been endorsed by a range of United Nations and other organizations. The Rio+20 UN conference specifically drew attention to the green economy approach in the context of sustainable development to move away from business-as-usual practices, act to end poverty, address environmental destruction and build a bridge to the sustainable future. It is increasingly recognized that the tourism sector can make a major contribution to the green economy through more sustainable practices, climate change mitigation and ecotourism. The role of tourism sector will continue to be crucial in the post-2015 sustainable development agenda too. However, there are ambiguities about how tourism and allied industries can maximize their contribution to human well-being and ensure environmental sustainability, embracing issues of political economy, geography and business ethics. In this context, this book provides consensus about what the green economy entails, what role tourism can play in a green economy, early responses from many countries, on-going and emerging research initiatives that will enable tourism's transition to a green economy. The chapters address three key themes: understanding the Green Economy concept and the role of tourism; responses and initiatives in greening tourism; and emerging techniques and research implications. A wide range of case studies from around the world and in different contexts is included to demonstrate the extent of the challenge and range of opportunities for the tourism industry.
