**Carbonate Mud-Mounds** C. L. V. Monty, D. W. J. Bosence, P. H. Bridges, B. R. Pratt, 2009-04-13

This is the first book to investigate the structure, origin and evolution of carbonate mud-mounds. Mud-mounds are accumulations of biogenic carbonate sediment that are common in the geological record, and economically important as they host lead zinc mineralization and oil and gas. The book reviews, for the first time, the different mechanisms of mud-mound formation and examines in detail the major changes in mud-mound type and occurrence through geological time. The major part of the book contains case studies of mud-mounds from the Palaeozoic, Mesozoic and Cenozoic. The coverage is global and truly international, with 32 authors from 10 countries. The first volume to deal with the structure, formation and evolution of mud-mounds. Copiously illustrated, with nine colour plates. If you are a member of the International Association of Sedimentologists, for purchasing details, please see: <http://www.iasnet.org/publications/details.asp?code=SP23>

**Beiträge zur Paläontologie**, 2003

**Marine Palaeoenvironmental Analysis from Fossils** Dan W. J. Bosence, Peter A. Allison, 1995

This volume critically reviews the use of fossils for the analysis of palaeoenvironments. The papers are multi-disciplinary, drawing on a host of geochemical, palaeoecological and palaeontological methods from traditional taxonomic uniformitarianism to more recently developed geochemical isotopic analyses. The approach of the book is analytical rather than taxonomic, concentrating on a range of techniques. The common thread, however, is that it is palaeontological material that is being considered, whether it be identifiable body fossils, trace fossils, distinctive fossil associates, diagenetically unaltered material or organic compounds. Using a number of methods, and comparing their results, allows different environmental controls to be isolated and provides more information on

the record of past environmental parameters. The volume focuses on the data obtained from organisms and their remains and will be of importance to sedimentologists, stratigraphers and palaeontologists who need to maximize their palaeoenvironmental interpretations of depositional environments, facies models, sequence stratigraphy and palaeoclimates.--Provided by publisher.
