Image Brokers Zeynep Devrim Gursel,2016-04-12 How does a photograph become a news image? An ethnography of the labor behind international news images, Image Brokers ruptures the self-evidence of the journalistic photograph by revealing the many factors determining how news audiences are shown people, events, and the world. News images, Zeynep Gürsel argues, function as formative fictions - fictional insofar as these images are constructed and culturally mediated, and formative because their public presence and circulation have real consequences in the world. Set against the backdrop of the War on Terror and based on fieldwork conducted at photojournalism's centers of power, Image Brokers offers an intimate look at an industry in crisis. At the turn of the 21st century, image brokers-the people who manage the distribution and restriction of news images-found the core technologies of their craft, the status of images, and their own professional standing all changing rapidly with the digitalization of the infrastructures of representation. From corporate sales meetings to wire service desks, newsrooms to photography workshops and festivals, Image Brokers investigates how news images are produced and how worldviews are reproduced in the process.

Digital Photographic Workflow Handbook Patricia Russotti,2012-11-12 The current existing workflow content out there deals only in RAW or DAM (Digital Asset Management) and can be extremely difficult and daunting to read. The Digital Photographic Workflow Handbook is a coherent, concise guide to all of the aspects of workflow that digital photographers and digital imagers need from shooting to archiving and everything in between -- written in a way that an artist/photographer can understand. It also has resources and links to stay current and up to speed with the rapid changes in technology, a Website that you can return to for the latest advances in workflow, and a glossary to use as you develop Standard Operating Procedures to synthesize your workflow and communication processes. This book will give you all of the workflow steps you will need -- from shooting to archiving and

everything in between -- and is written in a way that a way that you can understand. This handbook is software version independent and focuses more on the key fundamentals that are a constant from software version to software version.

Art Therapy in Australia Andrea J. Gilroy, Sheridan Linnell, Tarquam McKenna, Jill Westwood, 2019-01-28 This book maps the postcolonial terrain of art therapy in Australia. It documents Australian approaches that simultaneously reflect and challenge some of the dominant discourses of art therapy. It is visually innovative and addresses four overarching themes: histories, aesthetics, postcolonialism and place.

Cellular Automata in Image Processing and Geometry Paul Rosin, Andrew Adamatzky, Xianfang Sun, 2014-05-29 The book presents findings, views and ideas on what exact problems of image processing, pattern recognition and generation can be efficiently solved by cellular automata architectures. This volume provides a convenient collection in this area, in which publications are otherwise widely scattered throughout the literature. The topics covered include image compression and resizing; skeletonization, erosion and dilation; convex hull computation, edge detection and segmentation; forgery detection and content based retrieval; and pattern generation. The book advances the theory of image processing, pattern recognition and generation as well as the design of efficient algorithms and hardware for parallel image processing and analysis. It is aimed at computer scientists, software programmers, electronic engineers, mathematicians and physicists, and at everyone who studies or develops cellular automaton algorithms and tools for image processing and analysis, or develops novel architectures and implementations of massive parallel computing devices. The book will provide attractive reading for a general audience because it has do-it-yourself appeal: all the computer experiments presented within it can be implemented with minimal knowledge of programming. The simplicity yet substantial functionality of the cellular automaton approach, and the transparency of the algorithms proposed, makes the text ideal supplementary reading for courses on image processing, parallel computing, automata theory and applications.
