<u>Civil Engineering and Symmetry</u> Edmundas Kazimieras Zavadskas, Jurgita Antuchevičienė, Romualdas Bausys, 2019–06–14 A topic of utmost importance in civil engineering is finding optimal solutions throughout the life cycle of buildings and infrastructural objects, including their design, manufacturing, use, and maintenance. Operational research, management science, and optimization methods provide a consistent and applicable groundwork for engineering decision-making. These topics have received the interest of researchers and, after a rigorous peer-review process, eight papers have been published in this Special Issue. The articles in this Printed Edition demonstrate how solutions in civil engineering, which bring economic, social, and environmental benefits, are obtained through a variety of methodologies and tools. Usually, decision-makers need to take into account not just a single criterion, but several different criteria and, therefore, multicriteria decision-making (MCDM) approaches have been suggested for application in five of the published papers; the rest of the papers apply other research methods. Most approaches suggested decision models under uncertainty, proposing hybrid MCDM methods in combination with fuzzy or rough set theory, as well as D-numbers. The application areas of the proposed MCDM techniques mainly cover production/manufacturing engineering, logistics and transportation, and construction engineering and management. We hope that a summary of the Special Issue as provided here will encourage a detailed analysis of the papers included in the Printed Edition.

Power System Harmonics Jos Arrillaga, Neville R. Watson, 2004-06-25 Harmonic distortion problems include equipment overheating, motor failures, capacitor failure and inaccurate power metering. The topic of power system harmonics was covered for the first time 20 years ago and the first edition has become a standard reference work in this area. Unprecedented developments in power electronic devices and their integration at all levels in the power system require a new look at the causes and effects of these problems, and the state of hardware and software available for harmonic assessment. Following the successful first edition, this second edition of Power System Harmonics maintains the practical approach to the subject and discusses the impact of advanced power electronic technology on instrumentation, simulation, standards and active harmonic elimination techniques. Features include: A new chapter on modern digital instrumentation techniques. Added sections on active filters and modern distorting devices such as FACTS devices, multilevel conversion, current source, voltage source inverters and turn-OFFrelated power electronic devices. References to international standards for harmonics and inter-harmonics. Numerical examples of technique application. Offering a comprehensive understanding of power systems, this book is an asset to power engineers involved in the planning, design and operation of

power system generation, transmission and distribution. Researchers and postgraduate students in the field will also benefit from this useful reference.

Growth Hormone and Somatomedins during Lifespan Eugenio E. Müller, Daniela Cocchi, Vittorio Locatelli, 2012-12-06 The various congresses on growth hormone (GH) which have been held in Milan since 1967, the Milan Congresses, have witnessed over 25 years the tremendous expansion of a research field that was based initially upon the scarce knowledge of the biological properties of a protein. GH, whose chemical structure had just been identified and a radioimmunoassay developed for its measurement in blood, became in the following years a major area of biological research. The boundaries have since become blurred, as the research area has extended to the physiology and pathology of growth, puberty and reproduction, and the control of metabolism during the whole lifespan. Since the last GH Congress held in 1987, GH studies using the molecular biological approach have resulted in the puri fication, cloning and expression of the human GH (hGH) recep tor and binding protein, in new and exciting information on the insulin-like growth factors (IGF) and their paracrine and autocrine roles, and in the awareness that a panoply of binding proteins are present in the extracellular fluids and can, possibly, modulate IGF-receptor interactions and, thus, IGF actions. Finally, the availability of large amounts of biosynthetic hGH, besides allow ing more extensive clinical use in states of GH deficiency and extrasomatotrophic pathologies, has permitted disclosure of im portant metabolic effects of hGH during adulthood and, perhaps, aging and in many protein catabolic states.
