Transforming the Workforce for Children Birth Through Age 8 National Research Council,Institute of Medicine,Board on Children, Youth, and Families,Committee on the Science of Children Birth to Age 8: Deepening and Broadening the Foundation for Success,2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

How the World Changed Social Media Daniel Miller,Elisabetta Costa,Nell Haynes,Tom McDonald,Razvan Nicolescu,Jolynna Sinanan,Juliano Spyer,Shriram Venkatraman,Xinyuan Wang,2016-02-29 How the World Changed Social Media is the first book in Why We Post, a book series that investigates the findings of anthropologists who each spent 15 months living in communities across the world. This book offers a comparative analysis summarising the results of the research and explores the impact of social media on politics and gender, education and commerce. What is the result of the increased emphasis on visual communication? Are we becoming more individual or more social? Why is public social media so conservative? Why does equality online fail to shift inequality offline? How did memes become the moral police of the internet? Supported by an introduction to the project's academic framework and theoretical terms that help to account for the findings, the book argues that the only way to appreciate and understand something as intimate and ubiquitous as social media is to be immersed in the lives of the people who post. Only then can we discover how people all around the world have already transformed social media in such unexpected ways and assess the consequences

Exhibiting Atrocity Amy Sodaro,2018-01-23 Today, nearly any group or nation with violence in its past has constructed or is planning a memorial museum as a mechanism for confronting past trauma, often together with truth commissions, trials, and/or other symbolic or material reparations. Exhibiting Atrocity documents the emergence of the memorial museum as a new cultural form of commemoration, and analyzes its use in efforts to come to terms with past political violence and to promote democracy and human rights. Through a global comparative approach, Amy Sodaro uses in-depth case studies of five exemplary memorial museums that commemorate a range of violent pasts and allow for a chronological and global examination of the trend: the U.S. Holocaust Memorial Museum in Washington, DC; the House of Terror in Budapest, Hungary; the Kigali Genocide Memorial Centre in Rwanda; the Museum of Memory and Human Rights in Santiago, Chile; and the National September 11 Memorial Museum in New York. Together, these case studies illustrate the historical emergence and global spread of the memorial museum and show how this new cultural form of commemoration is intended to be used in contemporary societies around the world.

Connecting Families Carman Neustaedter,Steve Harrison,Abigail Sellen,2012-08-28 New technologies are radically changing the way that families connect with one another: we can text our teenagers from work, eat dinner with far-away parents via video link, and instantly upload and share photos after a family day out. Whether we are bridging time or distance, and whether we are enhancing our closest relationships or strengthening the bonds of extended family, as computer technologies alter the communication landscape, they in turn are changing the way we conduct and experience family life. This state of the art volume explores the impact of new communication systems on how families interact — how they share their lives and routines, engage in social touch, and negotiate being together or being apart — by considering a range of different family relationships that shape the nature of communication. Composed of three sections, the first looks at what is often the core of a 'family', the couple, to understand the impact of technology on couple relationships, communication, and feelings of closeness. The second section studies immediate families that have expanded beyond just the individual or couple to include children. Here, the emphasis is on connection for communication, coordination, and play. The third section moves beyond the immediate family to explore connections between extended, distributed family members. This includes connections between adult children and their parents, grandparents and grandchildren, and adult siblings. Here family members have grown older, moved away from 'home', and forged new families. Researchers, designers and developers of new communication technologies will find this volume invaluable. Connecting Families: The Impact of New Communication Technologies on Domestic Life brings together the most up-to-date studies to help in understanding how new communication technologies shape — and are shaped by — family life, and offers inspiration and guidance for design by making clear what families need and value from technological systems.
