Bridging the Gaps Danny Zborover,Peter Kroefges,2015-04-02 Bridging the Gaps: Integrating Archaeology and History in Oaxaca, Mexico does just that: it bridges the gap between archaeology and history of the Precolumbian, Colonial, and Republican eras of the state of Oaxaca, Mexico, a cultural area encompassing several of the longest-enduring literate societies in the world. Fourteen case studies from an interdisciplinary group of archaeologists, anthropologists, ethnohistorians, and art historians consciously compare and contrast changes and continuities in material culture before and after the Spanish conquest, in Prehispanic and Colonial documents, and in oral traditions rooted in the present but reflecting upon the deep past. Contributors consider both indigenous and European perspectives while exposing and addressing the difficulties that arise from the application of this conjunctive approach. Inspired by the late Dr. Bruce E. Byland's work in the Mixteca, which exemplified the union of archaeological and historical evidence and inspired new generations of scholars, Bridging the Gaps promotes the practice of integrative studies to explore the complex intersections between social organization and political alliances, religion and sacred landscape, ethnic identity and mobility, colonialism and resistance, and territoriality and economic resources.

Using Information Technology 9e Complete Edition Brian Williams,Stacey Sawyer,2010-02-23 The Williams, Using Information Technology, 9th edition utilizes a practical, applied approach to technology. This text is user-focused and has been highly updated including topics, pictures and examples. The Williams text contains less theory and more application to engage students who might be more familiar with technology. Continually published and updated for over 15 years, Using Information Technology was the first text to foresee and define the impact of digital convergence, the fusion of computers and communications. It was also the first text to acknowledge the new priorities imposed by the Internet and World Wide Web and bring discussion of them from late in the course to the beginning. Today, it is directed toward the "Always On" generation that is at ease with digital technology, comfortable with iPhones, MySpace, Facebook, Twitter, Wikipedia, and the blogosphere, but not always savvy about its processes, possibilities, and liabilities. This 9th edition continues to address the two most significant challenges that instructors face in teaching this course: Trying to make the course interesting and challenging, and trying to teach to students with a variety of computer backgrounds. This text also correlates with SimNet Online, our online training and assessment program for the MS Office Suite and also computing concepts!

Dunnock Behaviour and Social Evolution Nicholas B. Davies,1992 At first sight just a small brown bird, the dunnock's unobtrusive appearance belies its extraordinary behaviour and mating patterns. In this book Nick Davies gives a full account of the mating systems of the dunnock or hedge sparrow, *Prunella modularis*, which include pairs, a male with two females, two males with one female, and several males with several females. Detailed observations, elegant field experiments, and DNA fingerprinting are combined to show how this variable social organization arises from selfish individuals competing to maximize their own reproductive success.Further experiments reveal how the cuckoo may thwart the dunnock's parental efforts. David Quinn's exquisite drawings provide a visual summary of the birds' behaviour. All students of ecology, evolution, and animal behaviour will want to be familiar with this work, which addresses the wider issues of the influence of ecology on mating systems and the evolutionary significance of conflict within and between species. This is the

third volume in the Oxford Series in Ecology and Evolution, and the first in this series to tackle behavioural ecology. Nick Davies is a Lecturer in Zoology at the University of Cambridge and co-editor with J.R. Krebs of the leading text in the field, Behavioural Ecology: An Evolutionary Approach.

Intonation and Meaning Daniel Buring,2016 This volume provides a guide to what we know about the interplay between prosody-stress, phrasing, and melody-and interpretation-felicity in discourse, inferences, and emphasis. Speakers can modulate the meaning and effects of their utterances by changing the location of stress or of pauses, and by choosing the melody of their sentences. Although these factors often do not change the literal meaning of what is said, linguists have in recent years found tools and models to describe these more elusive aspects of linguistic meaning. This volume provides a guide to what we know about the interplay between prosody-stress, phrasing, and melody-and interpretation-felicity in discourse, inferences, and emphasis. Daniel Buring presents the main phenomena involved, and introduces the details of current formal analyses of prosodic structure, relevant aspects of discourse structure, intonational meaning, and, most importantly, the relations between them. He explains and compares the most influential theories in these areas, and outlines the questions that remain open for future research. This wide-ranging book involves aspects of phonetics, phonology, syntax, semantics, and pragmatics, and will be of interest to researchers and students in all of these fields, from advanced undergraduate level upwards.

Statistical Implicative Analysis Régis Gras,Einoshin Suzuki,Fabrice Guillet,Filippo Spagnolo,2008-04-29 Statistical implicative analysis is a data analysis method created by Régis Gras almost thirty years ago which has a significant impact on a variety of areas ranging from pedagogical and psychological research to data mining. Statistical implicative analysis (SIA) provides a framework for evaluating the strength of implications; such implications are formed through common knowledge acquisition techniques in any learning process, human or artificial. This new concept has developed into a unifying methodology, and has generated a powerful convergence of thought between mathematicians, statisticians, psychologists, specialists in pedagogy and last, but not least, computer scientists specialized in data mining. This volume collects significant research contributions of several rather distinct disciplines that benefit from SIA. Contributions range from psychological and pedagogical research, bioinformatics, knowledge management, and data mining.
