⍰ *Video Conferencing over IP: Configure, Secure, and Troubleshoot* Michael Gough,2006-06-07 This book de-mystifies the technology behind video conferencing and provides single users and small enterprises with the information they need to deploy video conferencing efficiently and cost effectively. For many years, the promise of high quality, low cost video conferencing has been an attractive solution for businesses interested in cutting travel costs while maintaining the benefits of face-to-face contact. Unfortunately, most solutions never lived up to the promise, due primarily to lack of internet bandwidth and poorly developed protocols. That's no all changed. The capacity has been created, the hardware works, and businesses are more eager than ever to cut down on travel costs. * Budget conscious methods for deploying Video over IP in small to medium enterprises * Coverage of Cisco, Microsoft, Skype, AOL, Google, VidiTel and many other products * How to identify and resolve nagging quality of service issues such as transmission delays and out of synch video-to-voice feeds

⚆ GPU-Based Techniques for Global Illumination Effects Laszlo Szirmay-Kalos,Laszlo Szecsi,Mateu Sbert,2022-05-31 This book presents techniques to render photo-realistic images by programming the Graphics Processing Unit (GPU). We discuss effects such as mirror reflections, refractions, caustics, diffuse or glossy indirect illumination, radiosity, single or multiple scattering in participating media, tone reproduction, glow, and depth of field. The book targets game developers, graphics programmers, and also students with some basic understanding of computer graphics algorithms, rendering APIs like Direct3D or OpenGL, and shader programming. In order to make the book self-contained, the most important concepts of local illumination and global illumination rendering, graphics hardware, and Direct3D/HLSL programming are reviewed in the first chapters. After these introductory chapters we warm up with simple methods including shadow and environment mapping, then we move on toward advanced concepts aiming at global illumination rendering. Since it would have been impossible to give a rigorous review of all approaches proposed in this field, we go into the details of just a few methods solving each particular global illumination effect. However, a short discussion of the

state of the art and links to the bibliography are also provided to refer the interested reader to techniques that are not detailed in this book. The implementation of the selected methods is also presented in HLSL, and we discuss their observed performance, merits, and disadvantages. In the last chapter, we also review how these techniques can be integrated in an advanced game engine and present case studies of their exploitation in games. Having gone through this book, the reader will have an overview of the state of the art, will be able to apply and improve these techniques, and most importantly, will be capable of developing brand new GPU algorithms. Table of Contents: Global Illumintation Rendering / Local Illumination Rendering Pipeline of GPUs / Programming and Controlling GPUs / Simple Improvements of the Local Illumination Model / Ray Casting on the GPU / Specular Effects with Rasterization / Diffuse and Glossy Indirect Illumination / Pre-computation Aided Global Illumination / Participating Media Rendering / Fake Global Illumination / Postprocessing Effects / Integrating GI Effects in Games and Virtual Reality Systems / Bibliography

 🄿 Regulation of Intracellular Ca2-release Channels by Ca2+ and Ca2+-binding Proteins Nael Nadif Kasri,2004 This is a Ph.D. dissertation. Almost everything we do is controlled by Ca2+, how we move, how our hearts beat and how our brains process information and store memories. Ca2+ is indeed a ubiquitous second messenger involved in a diversity of cellular activities such as muscular contraction, neurotransmitter release, synaptic plasticity, gene transcription, cell proliferation and apoptosis. The average cytosolic concentration of Ca2+ in resting cells ranges from 50nM to 100nM, reaching values close to 1uM when the cell is stimulated by a variety of physiological stimuli, while in the extracellular milieu this concentration is about 1mM. This large concentration gradient allows intracellular Ca2+ to work as a useful second messenger. Contents include: General Introduction, Objectives, Results, General Discussion, Summary.

 🄿 The Inverted Classroom Model Eva-Marie Groß kurth,Jürgen Handke,2014-11-10 Only two years after its first run, the Inverted Classroom Conference has become a familiar event at Marburg University. Most conference participants not only knew about this digital teaching and learning scenario but were experienced users and developers. While during its predecessors most participants wanted to familiarize themselves with the central components of the Inverted Classroom Model, the focus of the 3rd German Inverted Classroom Conference in 2014, to which this conference volume is dedicated, was not only a discussion of variants of the model but also, for the first time, the inclusion of long-term evaluations and aspects of student behavior. This shift of emphasis is reflected in the contributions to this volume. Even though all central aspects of the ICM - content production and delivery, testing, and the in-class phase - are still addressed, we can now find recommendations concerning digital material acquisition, in-class tuition, the role of student tutors as well as first long-term studies about ICM effects. In general then, the focus was much wider than that of the first two ICM-conferences: from a new and originally non-familiar teaching and learning scenario to more general aspects of digitization of teaching and learning in the 21st century.
 🄿 Shading, Lighting, and Rendering with Blender EEVEE Sammie Crowder,2022-04-25 Get to grips with new real-time animation techniques and tricks to improve your artistic and technical skills in shading, 3D rendering, and scene creation using Blender 3.0 Key Features Learn real-time rendering engine concepts by creating three projects Understand how to update workflows to Blender 3.0 Explore intermediate to advanced-level tutorials on creating art inside Blender Book Description Blender is the most important up-and-coming 3D software package in the world. EEVEE, a state-of-the-art real-time rendering engine is a fairly new addition to Blender and provides the capacity to create artwork at blazing speed, almost 12 times faster than Cycles. Lighting, Shading, and Rendering with Blender's EEVEE
provides a high-level overview of what EEVEE is capable of, then teaches users about Geometry Nodes, Rendering Techniques, using shortcuts like Kitbashing and Alphas to speed up scene creation, volumetrics, reflections, adding lights, cameras and even special effects like fire and smoke, all in EEVEE. All of this is in the context of creating actual scenes that readers will work through from start to finish. By the time a Blender Artist completes the book, they will have created three separate works that have challenged them to iterate and design with the full power of Blender's EEVEE. What you will learn Explore EEVEE Render Properties for optimal outcomes Focus on shading processes, including those that are both traditional and more cutting-edge Understand composition and create effective concept art inside Blender Discover procedural workflows to shorten the artistic process instead of getting mired in details Understand intermediate Blender workflows for working in a professional environment Develop art in different styles and learn why each style has different workflows and conventions Create interactive, rapid changes in Blender's EEVEE engine Who this book is for This book is for 3D animators, sculptors, modelers, and concept artists who want to use EEVEE to speed up their work in movies, TV, and game design. Readers are expected to have a basic to intermediate-level understanding of 3D programs and ray-tracing engines.

The Inverted Classroom Model J rgen Handke,Natalie Kiesler,Leonie Wiemeyer,2013-10-24 When the 1st German Inverted Classroom Conference was staged in 2012, the organizers thought that it may have been the first and last conference of this kind: Too few teachers seemed to be familiar with this model in the first place and only a tiny fragment of them would actually apply this model to their own teaching scenarios. However, in the 2013 conference, we were overwhelmed with a large number of teachers who not only wanted to find out about this teaching and learning concept but had already used it. Consequently, the focus of the 2nd German Inverted Classroom Conference to which this conference volume is dedicated was no longer the "installation" of the Inverted Classroom Model (ICM) but fine adjustments in the actual application of it. This is reflected in the contributions to this volume. Even though all three central aspects of the ICM are addressed, (1) content production and delivery, (2) testing, and (3) the in-class phase, there has been a shift away from mere content production towards an expansion of the model as well as a move towards fine adjustments of the three components.
