Learn Cocoa on the Mac David Mark,Jeff LaMarche,Jack Nutting,2010-06-25 The Cocoa frameworks are some of the most powerful frameworks for creating native desktop applications available on any platform today, and Apple gives them away, along with the Xcode development environment, for free! However, for a first-time Mac developer, just firing up Xcode and starting to browse the documentation can be a daunting task. The Objective-C class reference documentation alone would fill thousands of printed pages, not to mention all the other tutorials and guides included with Xcode. Where do you start? Which classes are you going to need to use? How do you use Xcode and the rest of the tools? This book answers these questions and more, helping you find your way through the jungle of classes, tools, and new concepts so that you can get started on the next great Mac OS X application today. Jack Nutting is your guide through this forest; he's lived here for years, and he'll show you which boulder to push, which vine to chop, and which stream to float across in order to make it through. You will learn not only how to use the components of this rich framework, but also which of them fit together, and why. Jack Nutting's approach, combining pragmatic problem-solving with a deep respect for the underlying design philosophies contained within Cocoa, stems from years of experience using these frameworks. He'll show you which parts of your application require you to jump in and code a solution, and which parts are best served by letting Cocoa take you where it wants you to go. The path over what looks like a mountain of components and APIs has never been more thoroughly prepared for your travels. With Jack's guidance, the steep learning curve becomes a pleasurable adventure. There is still much work for the uninitiated, but by the time you're done, you will be well on your way to becoming a Cocoa master.

How do I Look? Dominic White,2020-10-30 We live in the age of the retouchable selfie. For those navigating the world of social media, the issue of how one presents oneself to the world has never been more critical. Psychological studies have shown the high impact of this selfie culture on the mental health of young people especially. How might the long tradition of the Christian gaze, found in scripture, art, theology and philosophy speak into this selfie generation? What, in this context, might be the significance of the doctrine of humankind's creation in God's image, or of the incarnation? On a more practical level, how might the monastic tradition of the 'chaste gaze' challenge or reinforce the selfie-culture? Putting such theological and ethical questions into dialogue with psychological studies and philosophical understandings, the book offers an important pastoral and scholarly resource for anyone seeking to understand theologically one of the most profound developments of the digital age.

Multimedia Modeling Sh?ji Hashimoto,2000 Since the beginning of human history we have had a communication network that is identical with the physical distribution network. In the late 19th century we established the energy network to distribute electric and thermal energy, launching the modern society. The analog communication network became popular in the middle of the 20th century. And now, at the end of the 20th century, we have global digital information networks.Along with the advancement of the communication network, the progress of the information processing technology can be classified into three historical phases. The first phase technology is physical information processing, treating physical data from the real world. This technology is often called ?signal processing? and is based on the physical law of nature. The second phase is free from the physical constraints. It is logical information processing, dealing with knowledge and rules. The most important aspect of this phase is consistency. ?Provable? is employed to confirm the reality of the system.Based on the advanced computer and network technology, we are entering the third phase of information processing, which is ?Kansei? information processing. (?Kansei? is a Japanese word expressing some subjective ability referred to as ?sensitivity?, ?intuition?, ?affection? or ?emotion?). Emotional resonance or consent is important in the pursuit of reality in this phase.Multimedia modeling to harmonize different media and systems is one of the key technologies in the third phase of information processing. It will provide a next generation framework to construct a human-centered information environment that is more comfortable and more productive.This volume is devoted to a discussion on effective modeling of multimedia information and systems for a wide range of applications. It contains 30 technical articles, all of which were selected, after vigorous peer reviews, for presentation at the International Conference on Multimedia Modeling held in Nagano, Japan, on 13-15 November 2000.
