Automated Web Site Evaluation M.Y. Ivory,2013-06-29 Among all information systems that are nowadays available, web sites are definitely the ones having the widest potential audience and the most significant impact on the everyday life of people. Web sites contribute largely to the information society: they provide visitors with a large array of services and information and allow them to perform various tasks without prior assumptions about their computer literacy. Web sites are assumed to be accessible and usable to the widest possible audience. Consequently, usability has been recognized as a critical success factor for web sites of every kind. Beyond this universal recognition, usability still remains a notion that is hard to grasp. Summative evaluation methods have been introduced to identify potential usability problems to assess the quality of web sites. However, summative evaluation remains limited in impact as it does not necessarily deliver constructive comments to web site designers and developers on how to solve the usability problems. Formative evaluation methods have been introduced to address this issue. Evaluation remains a process that is hard to drive and perform, while its potential impact is probably maximal for the benefit of the final user. This complexity is exacerbated when web sites are very large, potentially up to several hundreds of thousands of pages, thus leading to a situation where evaluating the web site is almost impossible to conduct manually. Therefore, many attempts have been made to support evaluation with:

- Models that capture some characteristics of the web site of interest.

Handbook of Research on Web Log Analysis Jansen, Bernard J.,Spink, Amanda,Taksa, Isak,2008-10-31 This book reflects on the multifaceted themes of Web use and presents various approaches to log analysis--Provided by publisher.

Evolutionary Web Development Arno Scharl,2012-12-06 Examining the evolution of Web information systems, this text pays particular attention to the emergent attributes of electronic markets. Arno Scharl identifies four categories of architecture and demonstrates their virtues and limitations: static, interactive, adaptive, and agent- mediated systems. He presents an automated and scalable approach to Web assessment, emphasizing the role of feedback in an iterative cycle of design, implementation, usage, and analysis. Evolutionary Web Development blends a strong theoretical background with state-of-the-art research and several industry analyses, making it a valuable resource for researchers and students, as well as for practitioners looking for effective methods and tools. Web Search: Public Searching of the Web Amanda Spink,Bernard J. Jansen,2006-02-21 This book brings together results from the Web search studies we conducted from 1997 through 2004. The aim of our studies has been twofold: to examine how the public at large searches the Web and to highlight trends in public Web searching. The eight-year period from 1997 to 2004 saw the beginnings and maturity of public Web searching. Commercial Web search engines have come and gone, or endured, through the fall of the dot.com companies. We saw the rise and, in some cases, the demise of several high profile, publicly available Web search engines. The study of the Web search is an exciting and important area of interdisciplinary research. Our book provides a valuable insight into the growth and development of human interaction with Web search engines. In this book, our focus is on the human aspect of the interaction between user and Web search engine. We do not investigate the Web search engines themselves or their constantly changing interfaces, algorithms and features. We focus on exploring the cognitive and user aspects of public Web searching in the aggregate. We use a variety of quantitative and qualitative methods within the overall methodology known as transaction log analysis.
