**The Practice of Programming** Brian W. Kernighan, Rob Pike, 1999-02-09 With the same insight and authority that made their book *The Unix Programming Environment* a classic, Brian Kernighan and Rob Pike have written *The Practice of Programming* to help make individual programmers more effective and productive. The practice of programming is more than just writing code. Programmers must also assess tradeoffs, choose among design alternatives, debug and test, improve performance, and maintain software written by themselves and others. At the same time, they must be concerned with issues like compatibility, robustness, and reliability, while meeting specifications. *The Practice of Programming* covers all these topics, and more. This book is full of practical advice and real-world examples in C, C++, Java, and a variety of special-purpose languages. It includes chapters on:

- debugging: finding bugs quickly and methodically
- testing: guaranteeing that software works correctly and reliably
- performance: making programs faster and more compact
- portability: ensuring that programs run everywhere without change
- design: balancing goals and constraints to decide which

algorithms and data structures are best interfaces: using abstraction and information hiding to control the interactions between components style: writing code that works well and is a pleasure to read notation: choosing languages and tools that let the machine do more of the work Kernighan and Pike have distilled years of experience writing programs, teaching, and working with other programmers to create this book. Anyone who writes software will profit from the principles and guidance in The Practice of Programming.

Building Brand Authenticity M. Beverland,2009-10-22 The projection of authenticity is one of the key pillars of marketing. Research reveals that consumers seek authenticity through the brands they choose. Based on extensive research with consumers and brand managers this book offers seven guiding principles for building brand authenticity.

Choosing a Map Projection Miljenko Lapaine,E. Lynn Usery,2017-04-04 This book offers a much-needed critical approach to the intelligent use of the wide variety of map projections that are rapidly and inexpensively available today. It also discusses the distortions that are immanent in any map

projection. A well-chosen map projection is one in which extreme distortions are smaller than those in any other projection used to map the same area and in which the map properties match its purpose. Written by leading experts in the field, including W. Tobler, F.C. Kessler, S.E. Battersby, M.P. Finn, K.C. Clarke, V.S. Tikunov, H. Hargitai, B. Jenny and N. Franklula. This book is designed for use by laymen. The book editors are M. Lapaine and E.L. Usery, Chair and Vice-Chair, respectively, of the ICA Commission on Map Projections for the period 2011-2015.

The Licit Life of Capitalism Hannah Appel, 2019-12-13 The Licit Life of Capitalism is both an account of a specific capitalist project—U.S. oil companies working off the shores of Equatorial Guinea—and a sweeping theorization of more general forms and processes that facilitate diverse capitalist projects around the world. Hannah Appel draws on extensive fieldwork with managers and rig workers, lawyers and bureaucrats, the expat wives of American oil executives and the Equatoguinean women who work in their homes, to turn conventional critiques of capitalism on their head, arguing that market practices do not merely exacerbate inequality; they are made by it. People and places

differentially valued by gender, race, and colonial histories are the terrain on which the rules of capitalist economy are built. Appel shows how the corporate form and the contract, offshore rigs and economic theory are the assemblages of liberalism and race, expertise and gender, technology and domesticity that enable the licit life of capitalism—practices that are legally sanctioned, widely replicated, and ordinary, at the same time as they are messy, contested, and, arguably, indefensible.

**Combined Stresses in Plants** Ramamurthy Mahalingam, 2014-12-05 The unique responses of plants to combined stresses have been observed at physiological, biochemical, and molecular levels. This book provides an analysis of all three levels of change in various plants in response to different combinations of stresses. The text provides a general review of the combined stress paradigm, focuses on the impact of higher CO<sub>2</sub> levels in combination with other stresses, examines drought stress in conjunction with other abiotic factors in different crop plants as well as the combination of biotic and abiotic factors, and discusses the impact of combined stresses in forest ecosystems. Written by experts in the field, **Combined Stresses in Plants: Physiological, Molecular, and Biochemical Aspects** is a valuable resource for scientists, graduate students, and post-doctoral fellows alike working in plant stresses.

**Democracy Under Stress** Ursula Van Beek, Edmund Wnuk-Lipinski, 2012-02-01 DEMOCRACY

UNDER STRESS focuses on the global financial crisis of 2008-2009 and its implications for democracy. Why and how did the crisis come about? Are there any instructive lessons to be drawn from comparisons with the Great Depression of the 1930s? What are the democratic response mechanisms to cope with serious crises? Do they work? Is China a new trend setter? Do values matter? Are global democratic rules a possibility? These are some of the key questions addressed in the volume.

**Aquatic Biodiversity** Koen Martens, 2012-12-06 In this age of increased fundamental and applied research on biodiversity, no single volume was as yet devoted to the various temporal and spatial aspects of aquatic biodiversity. The present book is published in honour of Professor Henri Dumont (Ghent, Belgium) at the occasion of his retirement as Editor-in-Chief of *Hydrobiologia*. The volume presents a selection of contributions on aquatic biodiversity, written by colleagues from the editorial board, fellow editors of aquatic journals and former students and collaborators. Contributions deal with a wide spectrum of topics related to aquatic biodiversity and cover fields such as actual- and

palaeolimnology, taxonomy, and fundamental and applied limnology. Even reconnaissance chapters on management and cultural impact of water bodies are included. The book combines state-of-the-art contributions in aquatic sciences.

**Swoon: Great Seducers and Why Women Love Them** Betsy Prioleau, Elizabeth Stevens

Prioleau, 2013-02-04 Casanovas: where are those great romancers of women? In *Swoon*, Betsy Prioleau gives us a smart, entertaining study of ladies' men, demystifying their character, seductive secrets, and killer charm. Combining history, science, culture, and colorful contemporary research, Prioleau gives us a portrait of the successful seducer that explodes every stereotype and shatters every cliché. Instead of a satanic rake, slick player, or rich, handsome powerbroker, he's an unlikely, often homely Romeo who cares about women and understands what they want. Through analyses of history's legendary lovers and interviews with today's heartthrobs, Prioleau uncovers the surprising seductive secrets that really rock female hearts, from unfeigned ardor to conversational flair. In doing so, she destroys the pick-up artists' advice of such books as *The Game*. Finally, Prioleau critiques the

twenty-first-century sexual malaise, especially women's record discontent with men, and argues that it's high time to retrieve and celebrate the great seducer.

**Undocumented Secrets of MATLAB-Java Programming** Yair M. Altman, 2011-12-05 For a variety of reasons, the MATLAB®-Java interface was never fully documented. This is really quite unfortunate: Java is one of the most widely used programming languages, having many times the number of programmers and programming resources as MATLAB. Also unfortunate is the popular claim that while MATLAB is a fine programming platform for prototyping, it is not suitable for real-world, modern-looking applications. Undocumented Secrets of MATLAB®-Java Programming aims to correct this misconception. This book shows how using Java can significantly improve MATLAB program appearance and functionality, and that this can be done easily and even without any prior Java knowledge. Readers are led step-by-step from simple to complex customizations. Code snippets, screenshots, and numerous online references are provided to enable the utilization of this book as both a sequential tutorial and as a random-access reference suited for immediate use. Java-savvy

readers will find it easy to tailor code samples for their particular needs; for Java newcomers, an introduction to Java and numerous online references are provided. This book demonstrates how The MATLAB programming environment relies on Java for numerous tasks, including networking, data-processing algorithms and graphical user-interface (GUI) We can use MATLAB for easy access to external Java functionality, either third-party or user-created Using Java, we can extensively customize the MATLAB environment and application GUI, enabling the creation of visually appealing and usable applications

**The Lake Charr *Salvelinus namaycush*: Biology, Ecology, Distribution, and Management** Andrew M. Muir, Charles C. Krueger, Michael J. Hansen, Stephen C. Riley, 2021-03-03 The lake charr *Salvelinus namaycush* is a ubiquitous member of cold-water lake ecosystems in previously glaciated regions of northern continental U.S., Alaska, and Canada that often support important commercial, recreational,

and subsistence fisheries. The lake charr differs from other charrs by its large size, longevity, iteroparity, top-predator specialization, reduced sexual dimorphism, prevalence of lacustrine spawning, and use of deepwater habitat. The species is remarkably variable in phenotype, physiology, and life history, some of which is reflected in its ecology and genetics, with as many as four morphs or ecotypes co-occurring in a single lake. The lake charr is often the top predator in these systems, but is highly adaptable trophically, and is frequently planktivorous in small lakes. The lake charr by their name highlights their common habitat, lakes both large and small, but often frequents rivers and occasionally moves into the Arctic Ocean. Movement and behaviour of lake charr are motivated by access to cool, well-oxygenated water, foraging opportunities, predator avoidance, and reproduction. Owing to their broad distribution and trophic level, the lake charr serves as a sentinel of anthropogenic change. This volume will provide an up-to-date summary of what is currently known about lake charr from distribution to genetics to physiology to ecology. The book provides a compilation and synthesis of available information on the lake charr, beginning with an updated distribution and a revised

treatment of the paleoecology of the species. Understanding of ecological and genetic diversity and movement and behaviour of the species has advanced remarkably since the last major synthesis on the species over 40 years ago. Mid-sections of the book provide detailed accounts of the biology and life history of the species, and later sections are devoted to threats to conservation and fishery management practices used to ensure sustainability. A new standard lake charr-specific terminology is also presented. The book will be a valuable reference text for biologists around the world, ecologists, and fishery managers, and of interest to the angling public.

**DNA barcoding: a practical tool for fundamental and applied biodiversity research** Zoltan T Nagy, Thierry Backeljau, Marc De Meyer, Kurt Jordaens, 2013-12-30 DNA barcoding has become a well-accepted and popular tool for the identification of species and the detection of cryptic taxonomic diversity. As such, it has a tremendous potential for a wide variety of applications in taxonomy, agronomy, conservation biology, forensics etc. Therefore, several countries, institutions and organizations have launched DNA barcoding projects in the context of the international 'Consortium for the Barcode of Life' (CBOL) initiative. Also Belgium has done so with the establishment of the FWO research community 'Belgian Network for DNA barcoding'. In 2012, this network organized the 'Third European Conference for the Barcode of Life' (ECBOL3) in Brussels. During this event a call was made to publish a collection of papers under the thematic title 'DNA barcoding: a practical tool for fundamental and applied biodiversity research'. With the financial support of the EC project 'ViBRANT' (Virtual Biodiversity Research and Access Network for Taxonomy), 21 papers were

bundled to form this special 'ZooKeys' issue with the aim to present various applications, advantages and limitations of DNA barcoding. Hence, it is the editors' hope that this issue provides a modest, but timely, contribution to the already vast literature on DNA barcoding.
