Web Site Design Made Easy: Learn HTML, XHTML, and CSS Dennis Gaskill,2008-01-01 Web Site Design Made Easy teaches the basics of web design. While it does assume that students spend at least some time viewing web pages on the Internet and have basic computer skills, it assumes no other knowledge on their part. Not only will they learn to plan and create a working website, but they will discover many of the tricks that take a website from basic to cool and useful. Web design is a broad area that can encompass many things: coding knowledge, graphic design, copywriting, page layout, and more-even server software programming. One book cannot teach it all. This book mainly focuses on teaching HTML coding and formatting using CSS, utilizing both IBM Windows and Macintosh. Other areas are touched upon, but these basic skills will carry your student a long way toward their goal of website design. This book is a complete rewrite from previous editions. It

has been updated to the latest versions HTML (version 4.01) and CSS (version 2.1). The lessons teach web design that is XHTML compliant, and students can learn how to make a purely XHTML web page. CSS, cascading style sheets, has been given an extremely thorough treatment with three chapters dedicated to the subject, along with it being referenced throughout the book. Dennis Gaskill, a.k.a. Boogie Jack, is one of the most popular web page designers on the web. Students will enjoy his humor and they will love his book! Boogie Jack has received thousands of testimonials from his monthly Almost a Newsletter subscribers, confirming what a great job he does instructing them to create web sites.

Search User Interfaces Marti Hearst, 2009-09-21 Focuses on the human users of search engines and the tools available for interaction and visualization in searches.

People and Computers XVI - Memorable Yet Invisible Kristine Faulkner,Janet Finlay,Francoise Detienne,2012-12-06 For the last 20 years the dominant form of user interface has been the Graphical User Interface (GUI) with direct manipulation. As software gets more complicated and more and more inexperienced users come into contact with computers, enticed by the World Wide Web and smaller mobile devices, new interface metaphors are required. The increasing complexity of software has introduced more options to the user. This seemingly increased control actually decreases control as the number of options and features available to them overwhelms the users and

'information overload' can occur (Lachman, 1997). Conversational anthropomorphic interfaces provide a possible alternative to the direct manipulation metaphor. The aim of this paper is to investigate users reactions and assumptions when interacting with anthropomorphic agents. Here we consider how the level of anthropomorphism exhibited by the character and the level of interaction affects these assumptions. We compared characters of different levels of anthropomorphic abstraction, from a very abstract character to a realistic yet not human character. As more software is released for general use with anthropomorphic interfaces there seems to be no consensus of what the characters should look like and what look is more suited for different applications. Some software and research opts for realistic looking characters (for example, Haptik Inc., see <http://www.haptik.com>). others opt for cartoon characters (Microsoft, 1999) others opt for floating heads (Dohi & Ishizuka, 1997; Takama & Ishizuka, 1998; Koda, 1996; Koda & Maes, 1996a; Koda & Maes, 1996b).
