Managing Volunteers in Tourism Kirsten

Holmes, Karen Smith, 2012-05-16 Recent years have seen an explosion in research on tourism volunteering. Volunteers are an essential part of tourism, whether they are volunteering in their local museum, at a sporting mega-event, as an airport ambassador, or travelling the globe as a volunteer tourist. *Managing Volunteers in Tourism* reviews the latest research to highlight the key management issues and relate them to the tourism volunteering context. It includes previously under-researched forms of tourism volunteering such as meet-and-greeters, surf life-savers, conservation, festival, and information centre volunteers and volunTourists. The book develops through three distinct sections, the first of which begins by introducing the concept of volunteering and considering the variety of volunteer forms and settings within tourism. The next part picks up the organisational approach and examines volunteer program design and planning, volunteer motivation, recruitment and selection, training and development, reward and retention, and diversity management. The final part consists of ten case studies from leading international researchers and practitioners identifying best practice and key management challenges. Real-life examples and case studies throughout this book provide an in-depth examination of the challenges facing those managing tourism volunteers, making this book indispensable for current and future managers in the tourism industry.

Information Resource Science Tatyana

Berestova, 2020-08-24 This book is devoted to a new scientific research area termed 'Information Resource Science'. The majority of previous publications about information resources are simply a description of new research and developments or a marketing presentation of information resources. As such, while applicative knowledge about information resources is dynamically developing today, there is no actual theoretical study of information resource science. This book serves to solve basic issues of information resource theory, and fills the numerous lacunae that exist in the theoretical knowledge of information resources. The solutions presented here will help in dealing with applied problems of information resource science, which will, ultimately, have a positive effect on the practice of creating and using one of the most important modern sources of activity for both the individual and society.

Special Education Law Laura Rothstein, Scott F.

Johnson, 2020-07-23 Special Education Law, Sixth Edition, written by Laura Rothstein and Scott F. Johnson, provides a comprehensive and current overview of the major federal law, and judicial interpretations of those laws, that apply to special education students. School administrators and attorneys attend to special education issues on a regular basis, and local superintendents, principals, special education professionals, psychologists, and regional and state administrators must also be familiar with the legal requirements of educating students with disabilities. Classroom teachers in all types of classrooms need to be aware of the laws that affect them and their students. Special Education Law 6e is intended for students in education and educational administration, both graduate

and undergraduate, as well as law students in courses on special education law, school law, and special education. The framework of this book begins with five introductory chapters on the major issues that are addressed in special education law. These topics include an overview the legal system, the history of special education, major statutes in special education law, stakeholders such as students, families, educators, and advocates, and finally, requirements for protection under various special education laws. The remainder of the text presents and analyzes special education case law within specific contexts. The text helps educators understand what the law requires so that they can make decisions that comply with these laws. Updates for the sixth edition include a major reorganization of the text. Chapters have been streamlined and edited for clarity, combining a previous chapter on Related Services with Free Appropriate Publication Education, and folding Eligibility into Identification, Evaluation, and Eligibility, so students can better see the connections between these topics. Many case excerpts have been shortened or summarized to provide students with a more straightforward and focused reading experience. The latest updates in statutes, regulations, and case law are included throughout the text.

Internet Resource Pricing Models Ke Xu, Yifeng Zhong, Huan He, 2013-08-13 This brief guides the reader through three basic Internet resource pricing models using an Internet cost analysis. Addressing the evolution of service types, it presents several corresponding mechanisms which can ensure pricing implementation and resource allocation. The authors discuss utility optimization of network pricing methods in economics and underline two classes of pricing methods including system optimization and entities' strategic optimization. The brief closes with two examples of the newly proposed pricing strategy helping to solve the profit distribution problem brought by P2P free-riding and improve the pricing efficiency with the introduction of the price discrimination. The Internet resource pricing strategy is not only the key factor of Internet resource allocation efficiency, but also the determinant of the profit. The methods and models

discussed in Internet Resource Pricing Models increase the efficiency of existing pricing strategies to ensure a sound and sustainable development of the Internet. The brief will help researchers and professionals working with this key factor of Internet resource allocation.

Interdisciplinary Educational Research In Mathematics and Its Connections to The Arts and Sciences Bharath Sriraman, Claus Michelsen, Astrid Beckmann, Viktor Freiman, 2008-09-01 The book is based on the recently held Symposium on mathematics and its connections to the arts and sciences, namely the second Mathematics and its Connections to the Arts and Sciences (MACAS2) Symposium in Odense, Denmark (May 29-31, 2007). The chapters are an eclectic collection of interdisciplinary research initiatives undertaken by mathematics educators with implications for practitioners concerned with teaching and learning processes. The papers cover a wide genre of research domains within mathematics education (cognition, modelling, problem solving, teacher education, ethnomathematics, mathematical/statistical literacy, curricular and technological initiatives and research related to science education). The major interdisciplinary themes of the papers in this book are: 1. How can modelling activities be used to foster interdisciplinary projects in the school and university setting? 2. How can research within the ethnomathematics domain of mathematics education be linked to critical mathematics education and interdisciplinary projects involving mathematics, art and culture? 4. How can the push for mathematical and statistical literacy be connected to other subjects in the school curricula and emphasized via interdisciplinary

activities? 5. What are concrete examples of classroom experiments with empirical data that demonstrate new and unusual connections/relations between mathematics, arts and the sciences with implications for pedagogy? 6. What is the role of technology and new ICT interfaces in linking communities of learners in interdisciplinary activities involving problem solving? The book is an important contribution to the literature on educational initiatives in interdisciplinary education increasing vital for emerging professions of the 21st century.

New Perspectives on CALL for Second Language Classrooms Sandra Fotos, Charles M. Browne, 2013-06-17 This practical handbook is designed to help language teachers, teacher trainers, and students learn more about their options for using computer-assisted language learning (CALL) and develop an understanding of the theory and research supporting these options. The chapters in New Perspectives on CALL for Second Language Classrooms synthesize previous CALL theory and research and describe practical applications to both second and foreign language classrooms, including procedures for evaluating these applications. The implementation of CALL at the institutional level is also addressed, with attention to designing multimedia language laboratories and creating collaborative CALL-based projects between educational institutions. Although many chapters locate their descriptions of CALL activities and projects within the ESL/EFL setting, the principles and activities described are equally useful for other language settings. The book does not require prior knowledge of CALL, computers, or

software. To assist readers, a glossary of CALL terms and an appendix of CALL Web sites are provided. The book also has its own accompanying Web site (<http://www.erlbaum.com/callforL2classrooms>) presenting chapter abstracts, author contact information, and regularly updated links to pedagogical, research, and teacher development sites. By integrating theoretical issues, research findings, and practical guidelines on different aspects of CALL, this book offers teachers multiple levels of resources for their own professional development, for needs-based creation of specific CALL activities, for curriculum design, and for implementation of institutional and inter-institutional CALL projects.
