Fractional Graph Theory Edward R. Scheinerman, Daniel H. Ullman, 2013-04-29 This volume explains the general theory of hypergraphs and presents in-depth coverage of fundamental and advanced topics: fractional matching, fractional coloring, fractional edge coloring, fractional arboricity via matroid methods, fractional isomorphism, and more. 1997 edition.

Negative Actions Jonathan D. Payton, 2021-02-25 Negative actions (intentional omissions, refrainments, etc.) seem to be genuine actions. The standard metaphysical theories of action are event-based: they treat actions as events of a special kind. But it seems that many (and perhaps all) negative actions are, not events, but absences thereof. In this book, I provide a comprehensive treatment of this problem and its solution. I trace the appearance that negative actions are mere absences to the widely-assumed view that negative action sentences (sentences which describe an agent as omitting, refraining, etc.) are negative existentials, reporting the non-occurrence of an event of a certain kind. I argue, on the contrary, that such sentences report the occurrence of an event, not the absence of one. Moreover, I show how these events can be identified with ordinary, positive events of the sort we should already have in our ontology. In developing these views, I provide a comprehensive picture of the metaphysics of negative actions, the nature of our thought and talk about them, and their place in a theory of action and agency--

Action in Perception Alva Noë, 2004 An argument that perception is something we do, not something that happens to us: not a process in the brain, but a skillful bodily activity.

The Space of Literature Maurice Blanchot, 2015-11 Maurice Blanchot, the eminent literary and cultural critic, has had a vast influence on contemporary French writers--among them Jean Paul Sartre and Jacques Derrida. From the 1930s through the present day, his writings have been shaping the international literary consciousness. *The Space of Literature*, first published in France in 1955, is central to the development of Blanchot's thought. In it he reflects on literature and the unique demand it makes upon our attention. Thus he explores the process of reading as well as the nature of artistic creativity, all the while considering the relation of the literary work to time, to history, and to death. This book consists not so much in the application of a critical method or the demonstration of a theory of literature as in a patiently deliberate meditation upon the literary experience, informed most notably by studies of Mallarmé, Kafka, Rilke, and Hölderlin. Blanchot's discussions of those writers are among the finest in any language.

Model-Driven Software Development Markus Völter, Thomas Stahl, Jorn Bettin, Arno Haase, Simon Helsen, 2013-06-26 Model-Driven Software Development (MDSD) is currently a highly regarded development paradigm among developers and researchers. With the advent of OMG's MDA and Microsoft's Software Factories, the MDSD approach has moved to the centre of the programmer's attention, becoming the focus of conferences such as OOPSLA, JA00 and OOP. MDSD is about using domain-specific languages to create models that express application structure or behaviour in an efficient and domain-specific way. These models are subsequently transformed into executable code by a sequence of model

transformations. This practical guide for software architects and developers is peppered with practical examples and extensive case studies. International experts deliver:

- * A comprehensive overview of MDS and how it relates to industry standards such as MDA and Software Factories.
- * Technical details on meta modeling, DSL construction, model-to-model and model-to-code transformations, and software architecture.
- * Invaluable insight into the software development process, plus engineering issues such as versioning, testing and product line engineering.
- * Essential management knowledge covering economic and organizational topics, from a global perspective. Get started and benefit from some practical support along the way!

The Flower Ornament Scripture Thomas Cleary, 1993-10-12 Known in Chinese as Hua-yen and in Japanese as Kegon-kyo, the Avatamsaka Sutra, or Flower Ornament Scripture, is held in the highest regard and studied by Buddhists of all traditions. Through its structure and symbolism, as well as through its concisely stated principles, it conveys a vast range of Buddhist teachings. This one-volume edition contains Thomas Cleary's definitive translation of all thirty-nine books of the sutra, along with an introduction, a glossary, and Cleary's translation of Li Tongxuan's seventh-century guide to the final book, the Gandavyuha, Entry into the Realm of Reality.

Probability and Algorithms National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Panel on Probability and Algorithms, 1992-02-01 Some of the hardest computational problems have been successfully attacked through the use of probabilistic algorithms, which have an element of randomness to them. Concepts from the field of probability are also increasingly useful in analyzing the performance of algorithms, broadening our understanding beyond that provided by the worst-case or average-case analyses. This book surveys both of these emerging areas on the interface of the mathematical sciences and computer science. It is designed to attract new researchers to this area and provide them with enough background to begin explorations of their own.

Mental Causation Thomas Kroedel, 2019-12-19 Presents a comprehensive account of how the mind causes things to happen in the physical world. This book is also available as Open Access.

Introduction to Description Logic Franz Baader,Ian Horrocks,Carsten Lutz,Uli Sattler,2017-04-20 The first introductory textbook on description logics, relevant to computer science, knowledge representation and the semantic web.

The Different Modes of Existence Étienne Souriau,2016-03-01 What relation is there between the existence of a work of art and that of a living being? Between the existence of an atom and that of a value like solidarity? These questions become our own each time a reality—whether it is a piece of music, someone we love, or a fictional character—is established and begins to take on an importance in our lives. Like William James or Gilles Deleuze, Souriau methodically defends the thesis of an existential pluralism. There are indeed different manners of existing and even different degrees or intensities of existence: from pure phenomena to objectivized things, by way of the virtual and the “super-existent,” to which works of art and the intellect, and even morality, bear witness. Existence is polyphonic, and, as a result, the world is considerably enriched and enlarged. Beyond all that exists in the ordinary sense of the term, it is necessary to allow for all sorts of virtual and ephemeral states, transitional realms, and barely begun realities, still in the making, all of which constitute so many “inter-worlds.”

Compact Data Structures Gonzalo Navarro,2016-09-08 Compact data structures help represent data in reduced space while allowing it to be queried, navigated, and operated in compressed form. They are essential tools for efficiently handling massive amounts of data by exploiting the memory hierarchy. They also reduce the resources needed in distributed deployments and make better use of the limited memory in low-end devices. The field has developed rapidly, reaching a level of maturity that allows practitioners and researchers in application areas to benefit from the use of compact data structures. This first comprehensive book on the topic focuses on the structures that are most relevant for practical use. Readers will learn how the structures work, how to choose the right ones for their application scenario, and how to implement them. Researchers and students in the area will find in the book a definitive guide to the state of the art in compact data structures.

The First Minds Arthur S. Reber, 2018-10-25 First Minds: Caterpillars, 'Karyotes, and Consciousness presents a novel theory of the origins of mind and consciousness dubbed the Cellular Basis of Consciousness (CBC). It argues that sentience emerged with life itself. The most primitive unicellular species of bacteria are conscious, though it is a sentience of a primitive kind. They have minds, though they are tiny and limited in scope. Hints that cells might be conscious can be found in the writings of a few cell biologists but a fully developed theory has never been put forward before. Other approaches to the origins of consciousness are examined and shown to be seriously or fatally flawed, specifically approaches based on: (a) the assumption that minds are computational and can be captured by an Artificial Intelligence, (b) efforts to discover the neuro-correlates of mental experiences and, (c) looking for consciousness in less complex species by identifying those that have precursors of those neuro-correlates. Reber shows how each of these approaches is shown to be either essentially impossible (the AI models) or so burdened by philosophical and empirical difficulties that they are effectively unworkable. The CBC approach is developed using standard models of evolutionary biology. The remarkable repertoire of single-celled species that micro- and cell-biologists have discovered is reviewed. Bacteria, for example, have sophisticated sensory and perceptual systems, learn, form memories, make decisions based on information about their environment relative to internal metabolic states, communicate with each other, and even show a primitive form of altruism. All such functions are indicators of sentience. Finally, the implications of the CBC model are discussed along with a number of related issues in evolutionary biology, philosophy of mind, the possibility of sentient plants, the ethical repercussions of universal animal sentience, and the long-range impact of adopting the CBC stance.

Hannah Arendt: Challenges of Plurality Maria Robaszkiewicz, Tobias Matzner, 2021-11-15 This volume explores challenges posed by plurality, as understood by Hannah Arendt, but also the opportunities it offers. It is an interdisciplinary collection of chapters, including contributions from different traditions of philosophy, political science, and history. The book offers novel perspectives on central issues in research on Arendt, reconfiguring the existing interpretations and reinforcing the line of interpretation illuminating the phenomenological facets of Arendt's theory. The authors of the contributions to this volume decisively put the notion of plurality in the center of the collected interpretations, pointing out that plurality in its dialectic form of commonality, and difference is not only, as assumed by default, one of the most important notions in Arendt's theory, but the very central one. At the same time, plurality is a central issue in many current debates, from populism and hate speech to migration and privacy. This collection therefore connects the theoretical

advancements regarding Arendt and other political thinkers with some of the most pressing contemporary issues. This book will be of interest to scholars and advanced students from philosophy, political theory and related fields studying contemporary challenges of plurality as well as scholars interested in the work of Hannah Arendt.

Artificial Intelligence in Education Chee-Kit Looi, 2005 The field of Artificial Intelligence in Education includes research and researchers from many areas of technology and social science. This study aims to open opportunities for the cross-fertilization of information and ideas from researchers in the many fields that make up this interdisciplinary research area.

The Multiple Realization Book Thomas W. Polger, Lawrence A. Shapiro, 2016 Thomas W. Polger and Lawrence A. Shapiro provide a full investigation of multiple realisation - the idea that minds can be realised in ways other than the human brain. They cast doubt on the hypothesis and give an alternative framework for understanding explanations in the cognitive sciences, and in chemistry, biology, and related fields.

Narrative Intelligence Michael Mateas, Phoebe Sengers, 2003-02-27 Narrative Intelligence (NI) – the confluence of narrative, Artificial Intelligence, and media studies – studies, models, and supports the human use of narrative to understand the world. This volume brings together established work and founding documents in Narrative Intelligence to form a common reference point for NI researchers, providing perspectives from computational linguistics, agent research, psychology, ethology, art, and media theory. It describes artificial agents with narratively structured behavior, agents that take part in stories and tours, systems that automatically generate stories, dramas, and documentaries, and systems that support people telling their own stories. It looks at how people use stories, the features of narrative that play a role in how people understand the world, and how human narrative ability may have evolved. It addresses meta-issues in NI: the history of the field, the stories AI researchers tell about their research, and the effects those stories have on the things they discover. (Series B)
