InterMedia in South Asia Rajinder Dudrah,Sangita Gopal,Amit Rai,Anustup Basu,2013-09-13 The emergence of new media today in South Asia has signalled an event, the meaning of which remains obscure but whose reality is rapidly evolving along gradients of intensity and experience. Contemporary media in and from South Asia have come to sense a new arrangement of value, sensation, and force – new forms of becoming that might be usefully termed as 'media ecologies'. This evolution from nation-based forms of communication (Doordarshan, All India Radio, the national feudal romance) to simultaneous global ones conform and mutate the structures of feeling of local, national, diasporic and transnational belonging. This collection of original essays is concerned with understanding how people are making meaning from the new media and how subaltern tinkering (pirating, peer to peer file sharing, hacking, noise jamming, indymedia, etc.) does things to and in the new media. This exciting works helps us to make sense of the creation of new publics, new affects and new experiences of

pleasure and value in convergences of intermedia in a fast developing South Asia context. This book was originally published as a special issue of South Asian Popular Culture.

  The Past Web Daniel Gomes,Elena Demidova,Jane Winters,Thomas Risse,2021-06-30 This book provides practical information about web archives, offers inspiring examples for web archivists, raises new challenges, and shares recent research results about access methods to explore information from the past preserved by web archives. The book is structured in six parts. Part 1 advocates for the importance of web archives to preserve our collective memory in the digital era, demonstrates the problem of web ephemera and shows how web archiving activities have been trying to address this challenge. Part 2 then focuses on different strategies for selecting web content to be preserved and on the media types that different web archives host. It provides an overview of efforts to address the preservation of web content as well as smaller-scale but high-quality collections of social media or audiovisual content. Next, Part 3 presents examples of initiatives to improve access to archived web information and provides an overview of access mechanisms for web archives designed to be used by humans or automatically accessed by machines. Part 4 presents research use cases for web archives. It also discusses how to engage more researchers in exploiting web archives and provides inspiring research studies performed using the exploration of web archives. Subsequently, Part 5 demonstrates that web archives should become crucial infrastructures for modern connected societies. It makes the case for developing web archives as research infrastructures and presents several inspiring examples of added-value services built on web archives. Lastly, Part 6 reflects on the

evolution of the web and the sustainability of web archiving activities. It debates the requirements and challenges for web archives if they are to assume the responsibility of being societal infrastructures that enable the preservation of memory. This book targets academics and advanced professionals in a broad range of research areas such as digital humanities, social sciences, history, media studies and information or computer science. It also aims to fill the need for a scholarly overview to support lecturers who would like to introduce web archiving into their courses by offering an initial reference for students.

   Spider Venoms P. Gopalakrishnakone,Gerardo A. Corzo,Elia Diego-Garcia,Maria Elena Lima,2016-05-10 In recent years, the field of Toxinology has expanded substantially. On the one hand it studies venomous animals, plants and micro organisms in detail to understand their mode of action on targets. While on the other, it explores the biochemical composition, genomics and proteomics of toxins and venoms to understand their three interaction with life forms (especially humans), development of antidotes and exploring their pharmacological potential. Therefore, Toxinology has deep linkages with biochemistry, molecular biology, anatomy and

pharmacology. In addition, there is a fast developing applied subfield, clinical toxinology, which deals with understanding and managing medical effects of toxins on human body. Given the huge impact of toxin-based deaths globally, and the potential of venom in generation of drugs for so-far incurable diseases (for example, Diabetes, Chronic Pain), the continued research and growth of the field is imminent. This has led to the growth of research in the area and the consequent scholarly output by way of publications in journals and books. Despite this ever growing body of literature within biomedical sciences, there is still no all-inclusive reference work available that collects all of the important biochemical, biomedical and clinical insights relating to Toxinology. The Handbook of Toxinology aims to address this gap and cover the field of Toxinology comprehensively.

The Internet Myth Paolo Bory,2020-04-29 'The

Internet is broken and Paolo Bory knows how we got here. In a powerful book based on original research, Bory carefully documents the myths, imaginaries, and ideologies that shaped the material and cultural history of the Internet. As important as this book is to understand our shattered digital world, it is essential for those who would fix it.' — Vincent Mosco, author of The Smart City in a Digital World The Internet Myth retraces and challenges the myth laying at the foundations of the network ideologies – the idea that networks, by themselves, are the main agents of social, economic, political and cultural change. By comparing and integrating different sources related to network histories, this book emphasizes how a dominant narrative has extensively contributed to the construction of the Internet myth while other visions of the networked society have been erased from the collective imaginary. The book decodes, analyzes and challenges the foundations of the network ideologies looking at how networks have been imagined, designed and promoted during the crucial phase of the 1990s. Three case studies are scrutinized so as to reveal the complexity of network imaginaries in this decade: the birth of the Web and the mythopoesis of its inventor; and the histories of two Italian networking projects, the infrastructural plan Socrate and the civic network Iperbole, the first to give free Internet access to citizens. The Internet Myth thereby provides a compelling and hidden sociohistorical narrative in order to challenge one of the most powerful myths of our time.
