Challenging Modern Physics Al Kelly,2005 Newton's Laws held for 300 years until Einstein developed the 'special theory of relativity' in 1905. Experiments done since then show anomalies in that theory. This book starts with a description of the special theory of relativity. It is shown that Einstein was not the first to derive the famous equation $E = mc^2$, which has become synonymous with his name. Next, experimental evidence that cannot be explained by special relativity is given. In the light of this evidence, the two basic postulates of the special theory of relativity on the behaviour of light are shown to be untenable. A new theory (universal relativity) is developed, which conforms to the experimental evidence. The movement of a conductor near a pole of a magnet and the movement of that pole near the conductor does not always give the same result. It has been claimed that this contradicts relativity theory. Experiments described in this book show that it is not special relativity but another basic law of physics that is contradicted - Faraday's Law. The Big Bang theory of the beginning of the universe is questioned and an alternative proposed. The source of much of the mysterious missing 'dark matter' that has been sought for decades by astronomers is located. An explanation of the shapes of some galaxies is proffered. This book presents an alternative to Einstein's special theory of relativity, solves many problems left unanswered by special relativity, gives a better fit to many phenomena and experimental data and is more philosophically appealing. It is recommended to all people interested in fundamental issues of physics and cosmology. Professor Andre Assis, Brazil The book treats its subject properly, not just as an impersonal set of equations, but rather as a developing saga full of human triumph and failure. One learns from both experimental results and simple logical argument that all is not well with modern physics. Dr. Neal Graneau, Oxford University, U.K. Irish engineer solves the dark secrets of space. Sunday Times, U.K. Einstein got relativity theory wrong. Bangkok Post, Thailand

The Tramp in America Tim Cresswell,2004-06-01 This book provides the first account of the invention of the tramp as a social type in the United States between the 1870s and the 1930s. Tim Cresswell considers the ways in which the tramp was imagined and described and how, by World War II, it was being reclassified and rendered invisible. He describes the tramp scare of the late nineteenth century and explores the assumption that tramps were invariably male and therefore a threat to women. Cresswell also examines tramps as comic figures and looks at the work of prominent American photographers which signaled a sympathetic portrayal of this often-despised group. Perhaps most significantly, The Tramp in America calls into question the common assumption that mobility played a central role in the production of American identity. "This is an effective, and sometimes touching, account of how a social phenomenon was created, classified and reclassified. The quality of the writing, the excellent illustrations and the high production standards give this reasonably-priced hardback a chance of appealing to a general audience . . . an important contribution to American studies, providing new perspectives on the significance of mobility and rootlessness at an important time in the development of the nation. Cresswell successfully illuminates the history of a disadvantaged and marginal group, while providing a lens by which to focus on the thinking and practices of the mainstream culture with which they dealt. As such, this book represents a considerable achievement."—Cultural Geographies "An important book. Cresswell has made an important contribution to a homelessness literature still lacking a more sophisticated theoretical edge. Clearly written, beautifully illustrated and with a strong argument throughout, the book deserves to be widely read by students and practitioners alike."—Progress in Human Geography
