The world's biggest companies are pursuing a post-advertising strategy, moving away from advertising and investing in leading edge alternatives. In the vanguard of the revolution has been John Grant, co-founder of the legendary agency St. Luke's and author of The New Marketing Manifesto, whose radical thinking has informed a generation. Now Grant is set to stun the industry again. In The Brand Innovation Manifesto, he redefines the

nature of brands, showing why old models and scales no longer work and revealing that the key to success today is impacting people's lifestyles (think Starbucks, iPod and eBay). At the heart of the book is the concept of the 'brand molecule' to which new cultural ideas can be constantly added to keep pace with change. Cataloguing 32 classes of idea, Grant presents a practical approach to mixing and matching them within your own market to develop new brand ideas - and new ideas for existing brands.

Uncertainty Handling and Quality Assessment in Data Mining Michalis Vazirgiannis,Maria Halkidi,Dimitrious Gunopulos,2003-07-24 Uncertainty Handling and Quality Assessment in Data Mining provides an introduction to the application of these concepts in Knowledge Discovery and Data Mining. It reviews the state-of-the-art in uncertainty handling and discusses a framework for unveiling and handling uncertainty. Coverage of quality assessment begins with an introduction to cluster analysis and a comparison of the methods and approaches that may be used. The techniques and algorithms involved in other essential data mining tasks, such as classification and extraction of association rules, are also discussed together with a review of the quality criteria and techniques for evaluating the data mining results. This book presents a general framework for assessing quality and handling uncertainty which is based on tested concepts and theories. This framework forms the basis of an implementation tool, 'Uminer' which is introduced to the reader for the first time. This tool supports the key data mining tasks while enhancing the traditional processes for handling uncertainty and assessing quality. Aimed at IT professionals involved with data mining and knowledge discovery, the work is supported with case studies from epidemiology and telecommunications that illustrate how the tool works in 'real world' data mining projects. The book would also be of interest to final year undergraduates or post-graduate students looking at: databases, algorithms, artificial intelligence and information systems particularly with regard to uncertainty and quality assessment.

Perceptions of Female Offenders Brenda Russell,2012-12-09 Female offenders are often perceived as victims who commit crimes as a self-

defense mechanism or as criminal deviants whose actions strayed from typical 'womanly' behavior. Such cultural norms for violence exist in our gendered society and there has been scholarly debate about how male and female offenders are perceived and how this perception leads to differential treatment in the criminal justice system. This debate is primarily based upon theories associated with stereotypes and social norms and how these prescriptive norms can influence both public and criminal justice response. Scholars in psychology, sociology, and criminology have found that female offenders are perceived differently than male offenders and this ultimately leads to differential treatment in the criminal justice system. This interdisciplinary book provides an evidence based approach of how female offenders are perceived in society and how this translates to differential treatment within the criminal justice system and explores the ramifications of such differences. Quite often perceptions of female offenders are at odds with research findings. This book will provide a comprehensive evidence-based review of the research that is valuable to laypersons, researchers, practitioners, advocates, treatment providers, lawyers, judges, and anyone interested in equality in the criminal justice system.

Graves concludes by presenting coverage of important professional and business issues associated with building a career in digital forensics, including current licensing and certification requirements.

Lost and Living (In) Archives: Collectively Shaping New Memories Annet Dekker,2017-11-21 An archive is a collection of documents and records that is preserved for historical purposes. As such, an archive is considered a site of the past, a place that contains traces of a collective memory of a nation, a people or a group. Digital archives have changed from stable entities into flexible systems, referred to with the term ?Living Archives?. But in which ways has this change affected our relationship to the past, present and future? Will the erased, forgotten and neglected be redeemed, and new memories be allowed? Will the fictional versus factual mode of archiving offer the democracy that the public domain implies, or is it another way for public instruments of power to operate? 'Lost and Living (in) Archives' shows that an archive is not simply a recording, a reflection, or an image of an event, but that it shapes the event itself and thus influences both present and past.
