**Addressing Uncertainty about Future Airport Activity Levels in Airport Decision Making** Ian S. Kincaid, 2012 This report provides a guidebook on how to develop air traffic forecasts in the face of a broad range of uncertainties. It is targeted at airport operators, planners, designers, and other stakeholders involved in planning, managing, and financing of airports, and it provides a systems analysis methodology that augments standard master planning and strategic planning approaches. This methodology includes a set of tools for improving the understanding and application of risk and uncertainty in air traffic forecasts as well as for increasing overall effectiveness of airport planning and decision making. In developing the guidebook, the research team studied existing methods used in traditional master planning as well as methods that directly address risk and uncertainty, and based on that fundamental research, they created a straightforward and transparent systems analysis methodology for expanding and improving traditional planning practices, applicable through a wide range of airport sizes. The methods presented were tested through a series of case study applications that also helped to identify additional opportunities for future research and long-term enhancements.

**Knowledge Management Tools and Techniques** Madanmohan Rao, 2012-06-14 Knowledge management (KM) - or the practice of using information and collaboration technologies and processes to capture organizational learning and thereby improve business performance - is becoming one of the key disciplines in management, especially in large companies. Many books, magazines, conferences, vendors, consultancies, Web sites, online communities and email lists have been formed around this concept. This practical book focuses on the vast offerings of KM solutions—technology, content, and services. The focus is not on technology details, but on how KM and IT practitioners actually use KM tools and techniques. Over twenty case studies describe the real story of choosing and implementing various KM tools and techniques, and experts analyse the trends in the evolution of these technologies and tools, along with opportunities and challenges facing companies harnessing them. Lessons from successes and failures are drawn, along with roadmaps for companies beginning or expanding their KM practice. The introductory chapter presents a taxonomy of KM tools, identifies IT implications of KM practices, highlights lessons learned, and provides tips and recommendations for companies using these tools. Relevant literature on KM practices and key findings of market research groups and industry consortia such as IDC, Gartner and APQC, are presented. The majority of the book is devoted to case studies, featuring clients and vendors along the entire spectrum of solutions: hardware (e.g. handheld/wearable devices), software (e.g. analytics, collaboration, document management) and content (e.g. newsfeeds, market research). Each chapter is structured along the 8Cs framework developed by the author: connectivity, content, community, commerce, community, capacity, culture, cooperation and capital. In other words, each chapter addresses how appropriate KM tools and technologies help a company on specific fronts such as fostering adequate employee access to knowledge bodies, user-friendly work-oriented content, communities of practice, a culture of knowledge, learning capacity, a spirit of cooperation, commercial and other incentives, and carefully measured capital investments and returns. Vendor history, product/service offerings, implementation details, client testimonials, ROI reports, and future trends are highlighted. Experts in the field then provide third-party analysis on trends in KM tools and technique areas, and recommendations for KM practitioners.

**Supplemental Instruction** Abbas Strømme-Bakhtiar, Roger Helde, Elisabeth Suzen, 2021-03-30 Supplemental Instruction is a program designed to support students in their learning process. The program consists of advanced students supervising new students, where the purpose is to improve students' performance and reduce the risk of interruption of studies. Supplemental Instruction was established almost 50 years ago and is used today in universities around the world. This book is about the role, use and place of digital technologies in supplemental instruction, which includes why we need Supplemental Instruction, teacher's integration of technology experience with lecture capture and more. The book is aimed at anyone who is concerned about study quality in higher education. The contributors are researchers and lecturers at various universities from several countries. This book is the first of a trilogy on Supplemental Instruction, where the themes for the other books are Student Learning Processes and "Organization and Leadership". The editors of the trilogy are Abbas Strømme-Bakhtiar, Roger Helde and Elisabeth Suzen, all three Associate Professors at Nord University, Norway.

**University Governance** Catherine Paradeise, Emanuela Reale, Ivar Bleiklie, Ewan Ferlie, 2009-02-07 Higher education reforms have been on the agenda of Western European countries for 25 years, trying to deal with self governed professional bureaucracies politically weakened by massification when an emerging common understanding enhanced their role as major actors in knowledge based economies. While university systems are deeply embedded in national settings, the ex post rationale of still on-going reforms is surprisingly uniform and "de-nationalized". They promote (1) the "organizational turn" of universities, to varying extent substituting collegial loosely coupled entities by "integrated, goal-oriented entities deliberately choosing their own actions (and therefore open to differentiation), that can thus be held responsible for what they do" (2) the diversification of stakeholders, supposedly offering solutions to problems as various as the democratisation of universities, the shrinking of State budget resources and the diversification of university missions offering answers to changes in the making and in the use of science. When it comes to accounting for these reforms, two grand narratives of public management share the floor. NPM implies a strengthening of the capacity of the core State to direct public services organizations through management by objectives and results or contractualization, assessment, evaluation and. "Governance" focuses on "network-based" governance systems, where coordinating power and control are collectively shared between the major 'social actors or partners' at all levels of the decision-making system. Our results suggest that all higher education systems under study were more or less transformed according to both these narratives. It is therefore needed to understand how they combine or create contradictions. This leads us to test a third neo-weberian model. This model reaffirms the role of the State, of representative democracy, (central, regional and local), of public law (suitably modernized), preserves the idea of a public service with a distinctive status, culture and terms and conditions. It shifts from an internal orientation to bureaucratic rules towards an external orientation in meeting citizens' needs and wishes by means of standardization of work processes and their products, based on a distinctive public service and a particular legal order survived as the foundations beneath the various packages of modernizing reforms. This book traces the national dynamics of public policies, organizational design and steering tools in seven European higher education and research systems, using these narratives to interpret and test the actual changes and the degree of national specificities and European convergence. This book is not a sum of national chapters like other presumably comparative. It does not intend to tell once again the story of the transformation of the relationships between the state and universities. It tries to use Higher education system to discuss issues on state intervention and steering and more generally the NPM, governance and neo-weberian models in a specific field. Furthermore, this book intends breaking the walls between specialists in higher education and specialist in public management and research policy. This well rooted division of labour is less that ever justified as the university mission in research (fundamental, applied, strategic) is underscored by commentators and reformers themselves. For that reason, we have chosen to observe the consequences of the dynamics of public policies, organizational design and steering tools on two specific issues related to the development of research training and organizing within universities: the transformation of research funding on the one hand and the expansion of graduate studies and doctoral schools on the other.

**Towards a Natural Social Contract** Patrick Huntjens, 2021-03-30 This open access book is a 2022 Nautilus Gold Medal winner in the category World Cultures' Transformational Growth & Development. It states that the societal fault lines of our times are deeply intertwined and that they confront us with challenges affecting the security, fairness and sustainability of our societies. The author, Prof. Dr. Patrick Huntjens, argues that overcoming these existential challenges will require a fundamental shift from our current anthropocentric and economic growth-oriented approach to a more ecocentric and regenerative approach. He advocates for a Natural Social Contract that emphasizes long-term sustainability and the general welfare of both humankind and planet Earth. Achieving this crucial balance calls for an end to unlimited economic growth, overconsumption and over-individualisation for the benefit of ourselves, our planet, and future generations. To this end, sustainability, health, and justice in all social-ecological systems will require systemic innovation and prioritizing a collective effort. The Transformative Social-Ecological Innovation (TSEI) framework presented in this

book serves that cause. It helps to diagnose and advance innovation and spur change across sectors, disciplines, and at different levels of governance. Altogether, TSEI identifies intervention points and formulates jointly developed and shared solutions to inform policymakers, administrators, concerned citizens, and professionals dedicated towards a more sustainable, healthy and just society. A wide readership of students, researchers, practitioners and policy makers interested in social innovation, transition studies, development studies, social policy, social justice, climate change, environmental studies, political science and economics will find this cutting-edge book particularly useful. "As a sustainability transition researcher, I am truly excited about this book. Two unique aspects of the book are that it considers bigger transformation issues (such as societies' relationship with nature, purpose and justice) than those studied in transition studies and offers analytical frameworks and methods for taking up the challenge of achieving change on the ground." - Prof. Dr. René Kemp, United Nations University and Maastricht Sustainability Institute

**Laparoscopic Ventral Hernia Repair** Salvador Morales-Conde,2013-12-11 Primary and incisional ventral hernias are common conditions often encountered in surgical practice. Because of the frequency of this problem it has come to be managed by surgeons in general, regardless of the type of hospital or the conditions dealt with in their daily practice. Laparoscopic surgery has demonstrated to have an important role among the different technique described to repair ventral hernia with less recurrent rate, less morbidity and less overall cost than open conventional repair, with all the advantage of the laparoscopic approach. As a result the indications for this surgical technique are currently being debated since the advantages are evident and progressive implementation is ensured. Now is the time to analyze the usefulness, results, technical variants, anatomic, physiologic and scientific basis and implications involved in implementation of laparoscopy as the technique of choice.

**Transanal Minimally Invasive Surgery (TAMIS) and Transanal Total Mesorectal Excision (taTME)** Sam Atallah,2019-04-23 This book captures cornerstone developments in a new body of knowledge and provides an expert resource on a "hot topic" in rectal surgery. Transanal minimally invasive surgery (TAMIS) was designed for local excision of select rectal neoplasms, however soon it became realized that the TAMIS technique could be used for applications beyond local excision, most notably for transanal total mesorectal excision (taTME). This new operative technique has revolutionized our approach to the distal rectum by allowing for improved access, especially in obese male patients with an android pelvis, and by minimizing abdominal wall access trauma. The endpoints of improved oncologic resection, as defined by mesorectal envelope completeness, negative circumferential resection margins, and negative distal margin, are assessed. This book details controversies, pitfalls, and future directions of taTME and TAMIS. Chapters are authored by those on the forefront of innovation with TAMIS and taTME, and each is considered an authority on the topic. Transanal Minimally Invasive Surgery (TAMIS) and Transanal Total Mesorectal Excision (taTME) is a must-have reference for surgeons who are performing this operation and fellows in training who want to completely understand the various nuances of TAMIS and taTME.

**Build Wealth With Common Stocks** David J. Waldron,2021-01-19 An informed investor has a far greater chance of getting rich slow than getting rich fast, and getting rich slowly is better than not at all. From the dust jacket's inside flaps: Written for individual investors by an individual investor, in *Build Wealth With Common Stocks*, David J. Waldron shares actionable ideas to construct a potentially market-beating portfolio of the common shares of enduring companies to fund life's significant milestones. Waldron offers inspiring wisdom and memorable anecdotes to keep the reader moving forward during the endless roller coaster rides of market cycles. On Outperforming Wall Street Despite limited capital, the individual investor on Main Street has the potential to achieve superior returns with lower costs and less risk than the power brokers working on Wall Street. On Being a Thoughtful Investor To paraphrase American baseball legend Yogi Berra, investing is '90 percent half' common sense. The 'other half' is patience and discipline. On Patience Patience is the scarcest and, thereby, the most valuable commodity available to the retail-level investor. On Discipline One rule virtually guarantees you will never lose money on an investment (Chapter Five). On Productive Fear A portfolio constructed on the fear of losing money is destined to outperform a basket thrown together from the fear of missing out. On Taking Ownership Stop placing bets on stocks and start investing in companies. On Active vs. Passive Investing Buy slices of the best companies in the sector, reserving the index for hedging your portfolio. On the Perils of High Yield Dividends Chasing current yield is a recipe for junk equity. Instead, practice this more profitable concept of dividend investing (Chapter Nine). On the Death of Value Investing Value investing is never dead; it's just less popular than short-term growth stories. As long as there are financial markets or farmers' markets, value prevails. On the Benefits of Self-Directed Investing Build your beach or lake house instead of your financial advisor's. On Assessing Risk A risk understood, accepted, and well-managed becomes the risk worth taking. On Being a Defensive Investor Outperform the market by managing the downside while allowing the upside to take care of itself. Copyright 2020-21 by David J. Waldron. All rights reserved.

**Structural Health Monitoring Damage Detection Systems for Aerospace** Markus G. R. Sause,Elena Jasiūnienė,2021 This open access book presents established methods of structural health monitoring (SHM) and discusses their technological merit in the current aerospace environment. While the aerospace industry aims for weight reduction to improve fuel efficiency, reduce environmental impact, and to decrease maintenance time and operating costs, aircraft structures are often designed and built heavier than required in order to accommodate unpredictable failure. A way to overcome this approach is the use of SHM systems to detect the presence of defects. This book covers all major contemporary aerospace-relevant SHM methods, from the basics of each method to the various defect types that SHM is required to detect to discussion of signal processing developments alongside considerations of aerospace safety requirements. It will be of interest to professionals in industry and academic researchers alike, as well as engineering students. This article/publication is based upon work from COST Action CA18203 (ODIN - <http://odin-cost.com/>), supported by COST (European Cooperation in Science and Technology). COST (European Cooperation in Science and Technology) is a funding agency for research and innovation networks. Our Actions help connect research initiatives across Europe and enable scientists to grow their ideas by sharing them with their peers. This boosts their research, career and innovation.

**Future-Oriented Technology Analysis** Cristiano Cagnin,Michael Keenan,Ron Johnston,Fabiana Scapolo,Rémi Barré,2008-07-29 The application of foresight to address the challenges of uncertainty and rapid change has grown dramatically in the past decade. In that period, the techniques have been greatly refined and the scope has been broadened to encompass future-oriented technology analysis (FTA) and more recently, the concept and practice of strategic intelligence. FTA addresses directly the longer-term future through the active and continuous development of visions, and pathways to realise these visions. It is increasingly seen as a valuable management and policy tool complementing, and extending further into the future, classical strategy, planning, and decision-making approaches. This book charts the development of FTA and provides the first coherent description and analysis of its practical application and impact in the worlds of business, government, education and research in both advanced and developing countries. It draws on papers addressing the application of FTA around the globe which were presented at the Second International Seville Seminar in September 2006. The insights and practical experience will be invaluable for company managers, government ministers and officials, researchers and academics with responsibilities for effective planning and decision-making in an increasingly turbulent and unpredictable world.

**Exploratory Data Analysis in Business and Economics** Thomas Cleff,2013-11-12 In a world in which we are constantly

surrounded by data, figures, and statistics, it is imperative to understand and to be able to use quantitative methods. Statistical models and methods are among the most important tools in economic analysis, decision-making and business planning. This textbook, “Exploratory Data Analysis in Business and Economics”, aims to familiarise students of economics and business as well as practitioners in firms with the basic principles, techniques, and applications of descriptive statistics and data analysis. Drawing on practical examples from business settings, it demonstrates the basic descriptive methods of univariate and bivariate analysis. The textbook covers a range of subject matter, from data collection and scaling to the presentation and univariate analysis of quantitative data, and also includes analytic procedures for assessing bivariate relationships. It does not confine itself to presenting descriptive statistics, but also addresses the use of computer programmes such as Excel, SPSS, and STATA, thus treating all of the topics typically covered in a university course on descriptive statistics. The German edition of this textbook is one of the “bestsellers” on the German market for literature in statistics.
