*Willy Maykit in Space* Greg Trine, 2016-06-14 Earth-dwelling fourth-grader Willy Maykit couldn't be more excited about his school field trip to Planet Ed. Willy's class will blast off for the afternoon, learn about outer space, and be home in time for dinner. But when he wanders off on his own,

**Walter and Willy in Outer Space** Bonnie Grubman, A funny book about friends helping friends, creative problem solving . . . and traveling through space. For astronauts ages 5 years and up. Up, up, and away! Willy wants to become the first piggy in outer space. But how? With Walter's help, of course. They try several ideas, but nothing works. Not even a trampoline! Then, with a wish and some imagination, the friends decide to build their own rocket ship.

Shock Formation in Small-Data Solutions to 3D Quasilinear Wave Equations Jared Speck, 2016-12-07 In 1848 James Challis showed that smooth solutions to the compressible Euler equations can become multivalued, thus signifying the onset of a shock singularity. Today it is known that, for many hyperbolic systems, such singularities often develop. However, most shock-formation results have been proved only in one spatial dimension. Serge Alinhac's groundbreaking work on wave equations in the late 1990s was the first to treat more than one spatial dimension. In 2007, for the compressible Euler equations in vorticity-free regions, Demetrios Christodoulou remarkably sharpened Alinhac's results and gave a complete description of shock formation. In this monograph, Christodoulou's framework is extended to two classes of wave equations in three spatial dimensions. It is shown that if the nonlinear terms fail to satisfy the null condition, then for small data, shocks are the only possible singularities that can develop. Moreover, the author exhibits an open set of small data whose solutions form a shock, and he provides a sharp description of the blow-up. These results yield a sharp converse of the fundamental result of Christodoulou and Klainerman, who showed that small-data solutions are global when the null condition is satisfied. Readers who master the material will have acquired tools on the cutting edge of PDEs, fluid mechanics, hyperbolic conservation laws, wave equations, and geometric analysis.

**The Last of the Great Observatories** George H. Rieke, 2021-11-09 The Spitzer Space Observatory, originally known as the Space Infrared Telescope Facility (SIRTF), is the last of the four "Great Observatories", which also include the Hubble Space Telescope, the Chandra X-ray Observatory, and the Compton Gamma Ray Observatory. Developed over twenty years and dubbed the "Infrared Hubble," Spitzer was launched in the summer of 2003 and has since contributed significantly to our understanding of the universe. George Rieke played a key role in Spitzer and now relates the story of how that observatory was built and launched into space. Telling the story of this single mission within the context of NASA space science over two turbulent decades, he describes how, after a tortuous political trail to approval, Spitzer was started at the peak of NASA's experiment with streamlining and downsizing its mission development process, termed "faster better cheaper." Up to its official start and even afterward, Spitzer was significant not merely in terms of its scientific value but because it stood at the center of major changes in space science policy and politics. Through interviews with many of the project participants, Rieke reconstructs the political and managerial process by which space missions are conceived, approved, and developed. He reveals that by the time Spitzer had been completed, a number of mission failures had undermined faith in "faster-better-cheaper" and a more conservative approach was imposed. Rieke examines in detail the premises behind "faster better cheaper," their strengths and weaknesses, and their ultimate impact within the context of NASA's continuing search for the best way to build future missions. Rieke's participant's perspective takes readers inside Congress and NASA to trace the progress of missions prior to the

excitement of the launch, revealing the enormously complex and often disheartening political process that needs to be negotiated. He also shares some of the new observations and discoveries made by Spitzer in just its first year of operation. As the only book devoted to the Spitzer mission, *The Last of the Great Observatories* is a story at the nexus of politics and science, shedding new light on both spheres as it contemplates the future of mankind's exploration of the universe.

**Space, Structures and Design in a Post-Pandemic World** Thomas Fisher, 2022-04-27 Pandemics have long-term effects on how we live and work, and the COVID-19 pandemic was no exception, accelerating us into a digital economy, in which people increasingly work, shop, and learn online, transforming how we use space in-person and remotely. *Space, Structures, and Design in a Post-Pandemic World* explores the rebalancing of our physical and digital interactions and what it means for the built environment going forward. This book examines the effect of the pandemic on our use of land, interior space, energy, and transportation, as well as on our approach to design, wealth, work, and practice. Author Thomas Fisher also discusses the plagues of institutional racism and climate change that coincided with the COVID-19 pandemic and how these were interrelated. At the same time as all of this, the automation of all or part of many jobs continued unabated, eliminating much of the work that people did before COVID-19 arrived. This text discusses how we might leverage the under-utilized human talent and material assets all around us to rebuild our communities and our economy in more creative ways for a more equitable, resilient future. *Space, Structures, and Design in a Post-Pandemic World* will influence anyone interested in how design thinking can transform how we see the world and those looking for new ways to understand what the COVID-19 pandemic means and what opportunities it creates for our environments.

**3D** Jens Schröter, 2014-01-30 There is a blind spot in recent accounts of the history, theory and aesthetics of optical media: namely, the field of the three-dimensional, or trans-plane, image. It has been widely used in the 20th century for very different practices - military, scientific and medical visualization - precisely because it can provide more spatial information. And now in the 21st century, television and film are employing the method even more. Appearing for the first time in English, Jens Schroeter's comprehensive study of the aesthetics of the 3D image is a major scholarly addition to this evolving field. Citing case studies from the history of both technology and the arts, this wide-ranging and authoritative book charts the development in the theory and practice of three-dimensional images. Discussing and analyzing the transformation of the socio-cultural and technological milieu, Schroeter has produced a work of scholarship that combines impressive historical scope with contemporary theoretical arguments.

**Management and Minimisation of Uncertainties and Errors in Numerical Aerodynamics** Bernhard Eisfeld, Holger Barnewitz, Willy Fritz, Frank Thiele, 2013-02-11 This volume reports results from the German research initiative MUNA (Management and Minimization of Errors and Uncertainties in Numerical Aerodynamics), which combined development activities of the German Aerospace Center (DLR), German universities and German aircraft industry. The main objective of this five year project was the development of methods and procedures aiming at reducing various types of uncertainties that are typical of numerical flow simulations. The activities were focused on methods for grid manipulation, techniques for increasing the simulation accuracy, sensors for turbulence modelling, methods for handling uncertainties of the geometry and grid deformation as well as stochastic methods for quantifying aleatoric uncertainties.

*Big Data Analytics* Mrutyunjaya Panda,Ajith Abraham,Aboul Ella Hassanien,2018-12-12 Social networking has increased drastically in recent years, resulting in an increased amount of data being created daily. Furthermore, diversity of issues and complexity of the social networks pose a challenge in social network mining. Traditional algorithm software cannot deal with such complex and vast amounts of data, necessitating the development of novel analytic approaches and tools. This reference work deals with social network aspects of big data analytics. It covers theory, practices and challenges in social networking. The book spans numerous disciplines like neural networking, deep learning, artificial intelligence, visualization, e-learning in higher education, e-healthcare, security and intrusion detection.

*The Routledge Companion to Digital Humanities and Art History* Kathryn Brown,2020-04-15 The Routledge Companion to Digital Humanities and Art History offers a broad survey of cutting-edge intersections between digital technologies and the study of art history, museum practices, and cultural heritage. The volume focuses not only on new computational tools that have been developed for the study of artworks and their histories but also debates the disciplinary opportunities and challenges that have emerged in response to the use of digital resources and methodologies. Chapters cover a wide range of technical and conceptual themes that define the current state of the field and outline strategies for future development. This book offers a timely perspective on trans-disciplinary developments that are reshaping art historical research, conservation, and teaching. This book will be of interest to scholars in art history, historical theory, method and historiography, and research methods in education.

The Hell of it All Charlie Brooker,2009-10-22 Brooker on the BNP Party Political Broadcast: 'Nick Griffin's first line is Don't turn it off!, which in terms of opening gambits is about as enticing as hearing someone shout Try not to be sick! immediately prior to intercourse.' Brooker on Philip from The Apprentice: 'If it were legal or even possible to do so, he'd probably marry himself, then conduct a long-term affair with himself behind himself's back, eventually fathering nine children with himself, all of whom would walk and talk like him. And then he'd lock those mini-hims in a secret underground dungeon to have his sick way with his selves, undetected, for decades.' Brooker on Royal Ascot: 'Every year it's the same thing: a 200-year-old countess you've never heard of, who closely resembles a Cruella De Vil mannequin assembled entirely from heavily wrinkled scrotal tissue that's been soaked in tea for the past eight decades, attempts to draw attention away from her sagging neck - a droopy curtain of skin that hangs so low she has to repeatedly kick it out of her path as she crosses the royal compound - by balancing the millinery equivalent of Bilbao's Guggenheim museum on her head.'

**Basics of Virtual Reality** Armin Grasnack,2022-01-04 Today, the reality we know can be recorded and reproduced true to reality using technical processes. Space and time are recreated virtually as a copy in artificial reality. However, the reproduction of virtual reality is not limited to a mere copy of what exists. A visitor to the virtual space does not have to be content with the pixelated image of the old familiar, but can encounter unreal phenomena in the illusory world that never existed in real life or are even physically impossible. This enables an expansion of the recorded reality and allows the perception of surprisingly new perspectives. A perspective denotes the perception of a fact from a certain point of view and corresponds to the way of looking at things. But a perspective is also

the observation of a scene from a viewing position. From different perspectives the illusion of reality arises during the reproduction by observation. This vision is not based on imagination or hallucination, but is the basic function of virtual reality. This book describes the concepts, systems, and technologies used to create virtual reality from its ancient beginnings to the present, and provides a glimpse into a possible future. This book is a translation of the original German 1st edition *Grundlagen der virtuellen Realität* by Armin Grasnack, published by Springer-Verlag GmbH Germany, part of Springer Nature in 2020. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

Spatial Big Data, BIM and advanced GIS for Smart Transformation Sara Shirowzhan,Willie Tan,Samad M. E. Sepasgozar,2020-12-02

This book covers a range of topics including selective technologies and algorithms that can potentially contribute to developing an intelligent environment and smarter cities. While the connectivity and efficiency of smart cities is important, the analysis of the impact of construction development and large projects in the city is crucial to decision and policy makers, before the project is approved. This book also presents an agenda for future investigations to address the need for advanced tools such as mobile scanners, Geospatial Artificial Intelligence, Unmanned Aerial Vehicles, Geospatial Augmented Reality apps, Light Detection, and Ranging in smart cities. Some of selected specific tools presented in this book are as a simulator for improving the smart parking practices by modelling drivers with activity plans, a bike optimization algorithm to increase the efficiency of bike stations, an agent-based model simulation of human mobility with the use of mobile phone datasets. In addition, this book describes the use of numerical methods to match the network demand and supply of bicycles, investigate the distribution of railways using different indicators, presents a novel algorithm of direction-aware continuous moving K-nearest neighbor queries in road networks, and presents an efficient staged evacuation planning algorithm for multi-exit buildings.

**Digital Signifiers in an Architecture of Information** Pablo Lorenzo-Eiroa,2023-05-31 This book proposes a new critical relationship between computation and architecture, developing a history and theory of representation in architecture to understand and unleash potential means to open up creativity in the field. Historically, architecture has led to spatial representation. Today, computation has established new representational paradigms that can be compared to spatial representations, such as the revolution of perspective in the Renaissance. Architects now use software, robotics, and fabrication tools with very little understanding and participation in how these tools influence, revolutionize, and determine both architecture and its construction today. Why does the discipline of architecture not have a higher degree of authorship in the conception and development of computational technologies that define spatial representation? This book critically explores the relationship between history, theory, and cultural criticism. Lorenzo-Eiroa positions new understandings through parallel historical sections and theories of many revolutionary representational architecture canons displaced by conventional spatial projection. He identifies the architects, artists, mathematicians, and philosophers that were able to revolutionize their disciplines through the development of new technologies, new systems of representation, and new lenses to understand reality. This book frames the discussion by addressing new means to understand and expand architecture authorship in

relation to the survey, information, representation, higher dimensional space, Big Data, and Artificial Intelligence – in the pursuit of activating an architecture of information. This will be important reading for upper-level students and researchers of architecture and architectural theory, especially those with a keen interest in computational design and robotic fabrication.

Willy's personal story is set against the background of those turbulent years in which many changes took place in British society and in the development of art and art education. Willy was a very fine abstract expressionist painter, especially inspired by the Yorkshire landscape. Now little known it is hoped that the book will attract a wider audience to his work.
