Wings Above the Roof in 3D Danny Delvalle,2023-06-13 Wings Above the Roof in 3D is a short story of a fading hobby called flying birds. This took place in New York City with three young teenagers who love flying birds. After experiencing a brutal winter the year before, they decided to take the birds down to the basement for the winter; they would be breeding birds for the first time. Right before going down, the pigeons went on a long excursion. It was getting dark, and one of the boys started praying to Zeus, the god of the sky, to bring back their birds. Zeus heard his prayer and sent his granddaughter Athena to investigate. She had been bored misbehaving lately, so he skipped over Haytheus, who was next in line for a mission. Zeus thought it was too meager of a task for Haytheus. But nevertheless, Haytheus was jealous and followed Athena down below, and the game of chess ensued.

*The Digital Humanities* Eileen Gardiner,Ronald G. Musto,2015-06-25 The Digital Humanities is a comprehensive introduction and practical guide to how humanists use the digital to conduct research, organize materials, analyze, and publish findings. It summarizes the turn toward the digital that is reinventing every aspect of the humanities among scholars, libraries, publishers, administrators, and the public. Beginning with some definitions and a brief historical survey of the humanities, the book examines how humanists work, what they study, and how humanists and their research have been impacted by the digital and how, in turn, they shape it. It surveys digital humanities tools and their functions, the digital humanists' environments, and the outcomes and reception of their work. The book pays particular attention to both theoretical underpinnings and practical considerations for embarking on digital humanities projects. It places the digital humanities firmly within the historical traditions of the humanities and in the contexts of current academic and scholarly life.

A crash in August, 1917, with a Rumpler C airplane, on account of stalling, caused the idea to be put into concrete form and presented for a patent in 1918. The patent claim reads: Supporting surface characterized by its being divided into a number of tandem components which together form a wing section. The application was at first rejected because the patent office did not believe in the possibility of increasing the lift by dividing the wing. The issuing patent was made dependent on conclusive proof of such increase.
