Handbook of Translation Studies Yves Gambier, Luc van Doorslaer, 2010-10-28

As a meaningful manifestation of how institutionalized the discipline has become, the new Handbook of Translation Studies is most welcome. The HTS aims at disseminating knowledge about translation and interpreting to a relatively broad audience: not only students who often adamantly prefer user-friendliness, researchers and lecturers in Translation Studies, Translation & Interpreting professionals; but also scholars, experts and professionals from other disciplines (among which linguistics, sociology, history, psychology). Moreover, the HTS is the first handbook with this scope in Translation Studies that has both a print edition and an online version. The HTS is variously searchable: by article, by author, by subject. Another benefit is the interconnection with the selection and organization principles of the online Translation Studies Bibliography (TSB). Many items in the reference lists are hyperlinked to the TSB, where the user can find an abstract of a

publication. All articles are written by specialists in the different subfields and are peer-reviewed

Scientific and Technical Translation Explained Jody Byrne, 2014-04-08 From microbiology to nuclear physics and chemistry to software engineering, scientific and technical translation is a complex activity that involves communicating specialized information on a variety of subjects across multiple languages. It requires expert linguistic knowledge and writing skills, combined with the ability to research and understand complex concepts and present them to a range of different audiences. Using a combination of interdisciplinary research, real-world examples drawn from professional practice and numerous learning activities, this introductory textbook equips the student with the knowledge and skills needed to get started in this exciting and challenging field. It examines the origins and history of scientific and technical translation, and the people, tools and processes involved in translating scientific and technical texts. *Scientific and Technical Translation Explained* provides an overview of the main features of scientific and technical discourse as well as the different types of documents produced. A series of detailed case studies highlight various translation challenges and introduce a range of strategies for dealing with them. A variety of resources and exercises are included to make learning effective and enjoyable. Additional resources and activities are available on Facebook.

On Translation Di JIN, Eugene Albert NIDA, 2006-03-01 Following the theoretical framework Nida had developed over decades of work on translation and semiotics, the two authors offer an easily comprehensible analysis of the complex problems involved in translation. After a critical review of the historical development of translation theory in the light of modern information theory, they elucidate the most fundamental principles of translation in accordance with the concept of dynamic equivalence. The treatment is closely related to actual translation practice, and the principles elucidated are applicable to all types of translation, though most of the examples analyzed are taken from translations between Chinese and English. This new and expanded edition has two main parts. Part I is the complete text of the original work as published in the early 1980s. Part II consists of six of Professor Jin's more recent essays, which provide further insights into the principle of equivalent effect and its applications in literary translation. Particular attention is paid to practical procedures and the extremely complex relationship between creative translation and real fidelity. Kafka Translated Michelle Woods, 2013-11-07 Kafka Translated is the first book to look at the issue of translation and Kafka's work. What effect do the translations have on how we read Kafka? Are our interpretations of Kafka influenced by the translators' interpretations? In what ways has Kafka been 'translated' into Anglo-American culture by popular culture and by academics? Michelle Woods investigates issues central to the burgeoning field of translation studies: the notion of cultural untranslatability; the centrality of female translators in literary history; and the under-representation of the influence of the translator as interpreter of literary texts. She specifically focuses on the role of two of Kafka's first translators, Milena Jesenská and Willa Muir, as well as two contemporary translators, Mark Harman and Michael Hofmann, and how their work might allow us to reassess reading Kafka. From here Woods opens up the whole process of translation and re-examines accepted and prevailing interpretations of Kafka's work.

Translation Right Or Wrong Susana Bayó Belenguer, Eiléan Ní Chuilleanáin, Cormac Ó Cuilleánáin, 2013 This timely collection, which brings

The Irish District Court Caroline O'Nolan, 2013 This book presents courtroom-based research which unveils the largely hidden decisions and processes of the Irish District Court while also providing valuable insights into Irish policing priorities and practices. The numerous extracts of court proceedings which are interspersed throughout this book provide a detailed and nuanced picture of courtroom actors and practices and ensure readers acquire an in-depth understanding of sentencing decisions and practices. The book describes the increased presence of foreign defendants in the District Court and considers how this local court has adapted to deal with global citizens. The account illustrates that while penal institutions and practices are fashioned to fit the fabric of local societies, in the current era of movement and flux these institutions and practices are also shaped by exogenous forces such as migration, increased mobility and transnational crime.
