Twelve Years a Slave Solomon Northup, 2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Nortup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

Internet Daemons Fenwick McKelvey, 2018 We're used to talking about how tech giants like Google, Facebook, and Amazon rule the internet, but what about daemons? Ubiquitous programs that have colonized the Net's infrastructure-as well as the devices we use to access it-daemons are little known. Fenwick McKelvey weaves together history, theory, and policy to give a full account of where daemons come from and how they influence our lives-including their role in hot-button issues like network neutrality.

Copyright in the Age of Online Access João Pedro Quintais, 2017-05-15 In addition to proving virtually impossible, online enforcement of copyright may be undesirable because it risks encroaching upon fundamental rights and freedoms. However, the problem remains that creators are often not fairly remunerated for the online use of their works. This book addresses the urgent need to study pragmatic legal solutions that enable Internet users to access works in the digital environment, while assuring remuneration to rights holders and promoting the development of the information society. This study examines legalisation schemes that favour remunerated access over exclusivity and enforcement for large-scale online use by individuals. It investigates whether and to what extent these schemes (referred to as alternative compensation systems) are admissible under EU copyright law and consistent with its objectives, responding to such questions as the following in depth: - What existing copyright schemes provide an alternative to the exclusive right in copyright law? - What online rights apply to the activities of Internet users? - What types of models exist for the legalisation of online use of copyright works? - How can the public interest shape the scope of protection of copyright? - Can and should we legalise non-commercial file sharing and online use in EU copyright law? The book carefully examines these questions in light of EU primary law, relevant directives (with a focus on the InfoSoc Directive), case law (especially that of the CJEU), and legal literature in the field of copyright. The analysis culminates with a proposed blueprint for a compensated limitation for non-commercial individual use that is consistent with EU copyright law. As a thoroughly researched and balanced response to the urgent need to rethink EU copyright law in light of its lack of social acceptance and technological adequacy, this book will be of inestimable value to lawyers, policymakers, and scholars in the field, as well as to interest groups involved in discussions for reform and modernisation of EU

digital copyright law.

Federal Information Resources Robert E. Durkin, 1971

Peer-to-Peer Andy Oram, 2001-02-26 The term peer-to-peer has come to be applied to networks that expect end users to contribute their own files, computing time, or other resources to some shared project. Even more interesting than the systems' technical underpinnings are their socially disruptive potential: in various ways they return content, choice, and control to ordinary users. While this book is mostly about the technical promise of peer-to-peer, we also talk about its exciting social promise. Communities have been forming on the Internet for a long time, but they have been limited by the flat interactive qualities of email and Network newsgroups. People can exchange recommendations and ideas over these media, but have great difficulty commenting on each other's postings, structuring information, performing searches, or creating summaries. If tools provided ways to organize information intelligently, and if each person could serve up his or her own data and retrieve others' data, the possibilities for collaboration would take off. Peer-to-peer technologies along with metadata could enhance almost any group of people who share an interest--technical, cultural, political, medical, you name it. This book presents the goals that drive the developers of the best-known peer-to-peer systems, the problems they've faced, and the technical solutions they've found. Learn here the essentials of peer-to-peer from leaders of the field: Nelson Minar and Marc Hedlund of target=new>Popular Power, on a history of peer-to-peer Clay Shirky of accelerator group, on where peer-to-peer is likely to be headed Tim O'Reilly of O'Reilly & Associates, on redefining the public's perceptions Dan Bricklin, cocreator of Visicalc, on harvesting information from end-users David Anderson of SETI@home, on how SETI@Home created the world's largest computer Jeremie Miller of Jabber, on the Internet as a collection of conversations Gene Kan of Gnutella and GoneSilent.com, on lessons from Gnutella for peer-to-peer technologies Adam Langley of Freenet, on Freenet's present and upcoming architecture Alan Brown of Red Rover, on a deliberately low-tech content distribution system Marc Waldman, Lorrie Cranor, and Avi Rubin of AT&T Labs, on the Publius project and trust in distributed systems Roger Dingledine, Michael J. Freedman, and David Molnar of Free Haven, on resource allocation and accountability in distributed systems Rael Dornfest of O'Reilly Network and Dan Brickley of ILRT/RDF Web, on metadata Theodore Hong of Freenet, on performance Richard

Lethin of Reputation Technologies, on how reputation can be built online Jon Udell ofBYTE and Nimisha Asthagiri andWalter Tuvell of Groove Networks, on security Brandon Wiley of Freenet, on gateways between peer-to-peer systems You'll find information on the latest and greatest systems as well as upcoming efforts in this book.
