John Ellis

Winning Texas Hold'em Matt Maroon, 2005 All you need to play is a chip and a chair--and this straight from the start guide to the hottest, most popular form of poker around. Ben Affleck plays it, Allison Janney plays it, even Jason Alexander plays it. It's the game as big as all Texas, and the so-called Cadillac of poker. With shows like *Celebrity Poker Showdown* winning an avid audience, it seems everyone wants to get dealt in. Don't let the fun pass you by, because every rule and trick is explained in this first-ever truly complete guide to success in today's Texas hold'em games. Written by a professional player, it reveals everything you need to know to beat cash games for thousands of dollars. Begin with the most general concepts and move on to pot and implied odds; betting; bluffing and semi-bluffing; deception; flop, turn and river play; and other techniques of the table--including some advanced ones. And, because it's less about the cards you've got in your hand than your ability to psych-out your competitors--there's also plenty of advice on honing that skill, too.

The Winner's Guide to Texas Hold'em Poker Ken Warren, 1996 Written for beginning and intermediate players, Warren's book shows how to play and win Hold 'em, the most popular of the poker variations and the rage in card rooms and private games across the country. Numerous charts, tables, and examples help with explanations and analyses. 35 charts, 10 line drawings.

Winning Poker for the Serious Player Edwin Silberstang, 1992 Silberstang provides twelve hard hitting chapters and more than 100 actual examples provide tons of advice on beating Seven Card Stud, Texas Hold 'Em, Draw Poker, Lloball, High-Low and more than 10 other variations.'

Winning Poker Dean Matthewson, Angie Diamond, 2004 Covers play basics and winning strategies for the major games--Texas hold'em, Omaha, seven-card stud, five-card stud, and five-card draw.

Assessing the Tradecraft of Intelligence Analysis Gregory F. Treverton, C. Bryan Gabbard, 2008-02-27 This report assesses intelligence analysis across the main U.S. intelligence agencies and makes a number of recommendations, some of which parallel initiatives that have begun in the wake of the December 2004 legislation, for instance, create a Deputy Director of National Intelligence as a focal point for analysis, establish a

National Intelligence University, build a Long Term Analysis Unit at the National Intelligence Council, and form an Open Source Center for making more creative use of open-source materials.

Intelligence and the Cuban Missile Crisis James G. Blight, David A. Welch, 2013-11-05 This is the first study to examine thoroughly the role of US, Soviet and Cuban Intelligence in the nuclear crisis of 1962 - the closest the world has come to Armageddon.

Enemies of Intelligence Richard K. Betts, 2007 Combining study with experience, Richard K. Betts draws on three decades of work within the U.S. intelligence community to illuminate the paradoxes and problems that frustrate the intelligence process. Unlike America's efforts to improve its defenses against natural disasters, strengthening its strategic assessment capabilities means outwitting crafty enemies who operate beyond U.S. borders. It also requires looking within to the organizational and political dynamics of collecting information and determining its implications for policy. Betts outlines key strategies for better intelligence gathering and assessment. He describes how fixing one malfunction can create another; in what ways expertise can be both a vital tool and a source of error and misjudgment; the pitfalls of always striving for accuracy in intelligence, which in some cases can render it worthless; the danger, though unavoidable, of politicizing intelligence; and the issue of secrecy--when it is excessive, when it is insufficient, and how limiting privacy can in fact protect civil liberties. Grounding his arguments in extensive theory and policy analysis, Betts takes a comprehensive and realistic look at the convergence of knowledge and power in facing the intelligence challenges of the twenty-first century.

Reshaping National Intelligence for an Age of Information Gregory F. Treverton, 2003-03-03 Gregory Treverton, former US National Intelligence council head, demonstrates how government intelligence must change.

A Global History of Money Akinobu Kuroda, 2020-03-23 Looking from the 11th century to the 20th century, Kuroda

explores how money was used and how currencies evolved in transactions within local communities and in broader trade networks. The discussion covers Asia, Europe and Africa and highlights an impressive global interconnectedness in the pre-modern era as well as the modern age. Drawing on a remarkable range of primary and secondary sources, Kuroda reveals that cash transactions were not confined to dealings between people occupying different roles in the division of labour (for example shopkeepers and farmers), rather that peasants were in fact great users of cash, even in transactions between themselves. The book presents a new categorization framework for aligning exchange transactions with money usage choices. This fascinating monograph will be of great interest to advanced students and researchers of economic history, financial history, global history and monetary studies.

Making Sense of Transnational Threats Warren

Fishbein, 2004

Analytic Culture in the U. S. Intelligence Community Rob

Johnston, 2012-08 It is a rare season when the intelligence story in the news concerns intelligence analysis, not secret operations abroad. The United States is having such a season as it debates whether intelligence failed in the run-up to both September 11 and the second Iraq war, and so Rob Johnston's wonderful book is perfectly timed to provide the back-story to those headlines. The CIA's Center for the Study of Intelligence is to be commended for having the good sense to find Johnston and the courage to support his work, even though his conclusions are not what many in the world of intelligence analysis would like to hear. He reaches those conclusions through the careful procedures of an anthropologist—conducting literally hundreds of interviews and observing and participating in dozens of work groups in intelligence analysis—and so they cannot easily be dismissed as mere opinion, still less as the bitter mutterings of those who have lost out in the bureaucratic wars. His findings constitute not just a strong

indictment of the way American intelligence performs analysis, but also, and happily, a guide for how to do better. Johnston finds no baseline standard analytic method. Instead, the most common practice is to conduct limited brainstorming on the basis of previous analysis, thus producing a bias toward confirming earlier views. The validating of data is questionable—for instance, the Directorate of Operations (DO) cleaning of spy reports doesn't permit testing of their validity—reinforcing the tendency to look for data that confirms, not refutes, prevailing hypotheses. The process is risk averse, with considerable managerial conservatism. There is much more emphasis on avoiding error than on imagining surprises. The analytic process is driven by current intelligence, especially the CIA's crown jewel analytic product, the President's Daily Brief (PDB), which might be caricatured as CNN plus secrets. Johnston doesn't put it quite that way, but the Intelligence Community does more reporting than in-depth analysis. None of the analytic agencies knows much about the analytic techniques of the others. In all, there tends to be much more emphasis on writing and communication skills than on analytic methods. Training is driven more by the druthers of individual analysts than by any strategic view of the agencies and what they need. Most training is on-the-job. Johnston identifies the needs for analysis of at least three different types of consumers—cops, spies, and soldiers. The needs of those consumers produce at least three distinct types of intelligence—investigative or operational, strategic, and tactical. The research suggests the need for serious study of analytic methods across all three, guided by professional methodologists. Analysts should have many more opportunities to do fieldwork abroad. They should also move much more often across the agency stovepipes they now inhabit. These movements would give them a richer sense for how other agencies do analysis. Together, the analytic agencies should aim to create communities of practice, with mentoring, analytic practice groups, and various kinds of on-line resources, including forums on

methods and problem solving. These communities would be linked to a central repository of lessons learned, based on after-action post-mortems and more formal reviews of strategic intelligence products. These reviews should derive lessons for individuals and for teams and should look at roots of errors and failures. Oral and written histories would serve as other sources of wherewithal for lessons. These communities could also begin to reshape organizations, by rethinking organizational designs, developing more formal socialization programs, testing group configurations for effectiveness, and doing the same for management and leadership practices. Center for the Study of Intelligence, Central Intelligence Agency.
