[P] The SAGE Encyclopedia of Corporate Reputation Craig E. Carroll,2016-05-04 What creates corporate reputations and how should organizations respond? Corporate reputation is a growing research field in disciplines as diverse as communication, management, marketing, industrial and organizational psychology, and sociology. As a formal area of academic study, it is relatively young with roots in the 1980s and the emergence of specialized reputation rankings for industries, products/services, and performance dimensions and for regions. Such rankings resulted in competition between organizations and the alignment of organizational activities to qualify and improve standings in the rankings. In addition, today's changing stakeholder expectations, the growth of advocacy, demand for more disclosures and greater transparency, and globalized, mediatized environments create new challenges, pitfalls, and opportunities for organizations. Successfully engaging, dealing with, and working through reputational challenges requires an understanding of options and tools for organizational decision-making and stakeholder engagement. For the first time, the vast and important field of corporate reputation is explored in the format of an encyclopedic reference. The SAGE Encyclopedia of Corporate Reputation comprehensively overviews concepts and techniques for identifying, building, measuring, monitoring, evaluating, maintaining, valuing, living up to and/or changing corporate reputations. Key features include: 300 signed entries are organized in A-to-Z fashion in 2 volumes available in a choice of electronic or print formats Entries conclude with Cross-References and Further Readings to guide students to in-depth resources. Although organized A-to-Z, a thematic Reader's Guide in the front matter groups related entries by broad areas A Chronology provides historical perspective on the development of corporate reputation as a discrete field of study. A Resource Guide in the back matter lists classic books, key journals, associations, websites, and selected degree programs of relevance to corporate reputation. A General Bibliography will be accompanied by visual maps noting the relationships between the various disciplines touching upon corporate reputation studies. The work concludes with a comprehensive Index, which—in the electronic version—combines with the Reader's Guide and Cross-References to provide thorough search-and-browse capabilities

 Semantics Igor A. Mel Puk,2012-06-06 This book presents an innovative and novel approach to linguistic semantics, beginning with the idea that language can be described as a system for the expression of linguistic Meanings as particular surface forms or Texts. Semantics is specifically that system of rules that ensures a correct transition from a Semantic Representation of the Meaning of a family of synonymous sentences to the Deep Syntactic Representation of a particular sentence. Framed in the terms of Meaning-Text linguistics, this volume discusses in detail the problems of Semantic Representation —including the semantic structure of utterances, the semantics of Causation in English, and communicative, or information, structure. Based on the author's life-long dedication to the study of the semantics and syntax of natural language, this book is a paradigm-shifting contribution to the language sciences whose originality and daring will make it essential reading for linguists, anthropologists, semioticians, and computational linguists.

 The Digital Humanist Domenico Fiormonte,Teresa Numerico,Francesca Tomasi,2015 This book offers a critical introduction to the core technologies underlying the Internet from a humanistic perspective. It provides a cultural critique of computing technologies, by exploring the history of computing and examining issues related to writing, representing, archiving and searching. The book raises awareness of, and calls for, the digital humanities to address the challenges posed by the linguistic and cultural divides in computing, the clash between communication and control, and the biases inherent in networked technologies. A common problem with publications in the Digital Humanities is the dominance of the Anglo-American perspective. While seeking to take a broader view, the book attempts to show how cultural bias can become an obstacle to innovation both in the methodology and practice of the Digital Humanities. Its central point is that no technological instrument is culturally unbiased, and that all

TOO OFTEN THE GEOGRAPHY THAT UNDERLIES TECHNOLOGY COINCIDES WITH THE SOCIAL AND ECONOMIC INTERESTS OF ITS PRODUCERS. THE ALTERNATIVE PROPOSED IN THE BOOK IS ONE OF A WORLD IN WHICH VARIATION, CONTAMINATION AND DECENTRALIZATION ARE ESSENTIAL INSTRUMENTS FOR THE PRODUCTION AND TRANSMISSION OF DIGITAL KNOWLEDGE. IT IS THUS NECESSARY NOT ONLY TO HAVE SPACES WHERE DH SCHOLARS CAN INTERACT (SUCH AS INTERNATIONAL CONFERENCES, THATCAMPS, FORUMS AND MAILING LISTS), BUT ALSO A GENUINE SHARING OF TECHNOLOGICAL KNOW-HOW AND EXPERIENCE. THIS IS A TRULY EXCEPTIONAL WORK ON THE SUBJECT OF THE DIGITAL....STUDENTS AND SCHOLARS NEW TO THE FIELD OF DIGITAL HUMANITIES WILL FIND IN THIS BOOK A GENTLE INTRODUCTION TO THE FIELD, WHICH I CANNOT BUT THINK WOULD BE GOOD AND PERHAPS EVEN INSPIRATIONAL FOR THEM....ITS HISTORY OF THE DEVELOPMENT OF MACHINES AND PROGRAMS AND COMMUNITIES BENT ON USING COMPUTERS TO ADVANCE SCIENCE AND RESEARCH MERELY SETS THE STAGE FOR AN INSIGHTFUL ANALYSIS OF THE ROLE OF THE DIGITAL IN THE WAY BOTH SCHOLARS AND EVERYDAY PEOPLE COMMUNICATE AND CONCEIVE OF THEMSELVES AND OTHERS IN WRITTEN FORMS - FROM TREATISES TO CREDIT CARD TRANSACTIONS. ⬚ **Linguistic Linked Data** Philipp Cimiano,Christian Chiarcos,John P. McCrae,Jorge Gracia,2020-01-13 This is the first monograph on the emerging area of linguistic linked data. Presenting a combination of background information on linguistic linked data and concrete implementation advice, it introduces and discusses the main benefits of applying linked data (LD) principles to the representation and publication of linguistic resources, arguing that LD does not look at a single resource in isolation but seeks to create a large network of resources that can be used together and uniformly, and so making more of the single resource. The book describes how the LD principles can be applied to modelling language resources. The first part provides the foundation for understanding the remainder of the book, introducing the data models, ontology and query languages used as the basis of the Semantic Web and LD and offering a more detailed overview of the Linguistic Linked Data Cloud. The second part of the book focuses on modelling language resources using LD principles, describing how to model lexical resources using Ontolex-lemon, the lexicon model for ontologies, and how to annotate and address elements of text represented in RDF. It also demonstrates how to model annotations, and how to capture the metadata of language resources. Further, it includes a chapter on representing linguistic categories. In the third part of the book, the

AUTHORS DESCRIBE HOW LANGUAGE RESOURCES CAN BE TRANSFORMED INTO LD AND HOW LINKS CAN BE INFERRED AND ADDED TO THE DATA TO INCREASE CONNECTIVITY AND LINKING BETWEEN DIFFERENT DATASETS. THEY ALSO DISCUSS USING LD RESOURCES FOR NATURAL LANGUAGE PROCESSING. THE LAST PART DESCRIBES CONCRETE APPLICATIONS OF THE TECHNOLOGIES: REPRESENTING AND LINKING MULTILINGUAL WORDNETS, APPLICATIONS IN DIGITAL HUMANITIES AND THE DISCOVERY OF LANGUAGE RESOURCES. GIVEN ITS SCOPE, THE BOOK IS RELEVANT FOR RESEARCHERS AND GRADUATE STUDENTS INTERESTED IN TOPICS AT THE CROSSROADS OF NATURAL LANGUAGE PROCESSING / COMPUTATIONAL LINGUISTICS AND THE SEMANTIC WEB / LINKED DATA. IT APPEALS TO SEMANTIC WEB EXPERTS WHO ARE NOT PROFICIENT IN APPLYING THE SEMANTIC WEB AND LD PRINCIPLES TO LINGUISTIC DATA, AS WELL AS TO COMPUTATIONAL LINGUISTS WHO ARE USED TO WORKING WITH LEXICAL AND LINGUISTIC RESOURCES WANTING TO LEARN ABOUT A NEW PARADIGM FOR MODELLING, PUBLISHING AND EXPLOITING LINGUISTIC RESOURCES.

⚃ IDIOMS MARTIN EVERAERT,ERIK-JAN VAN DER LINDEN,ANDR, SCHENK,ROB SCHREUDER,ROBERT SCHREUDER,2014-04-04 IDIOMS HAVE ALWAYS AROUSED THE CURIOSITY OF LINGUISTS AND THERE IS A LONG TRADITION IN THE STUDY OF IDIOMS, ESPECIALLY WITHIN THE FIELDS OF LEXICOLOGY AND LEXICOGRAPHY. WITHOUT DENYING THE IMPORTANCE OF THIS TRADITION, THIS VOLUME PRESENTS

an overview of recent idiom research outside the immediate domain of lexicology/lexicography. The chapters address the status of idioms in recent formal and experimental linguistic theorizing. Interdisciplinary in scope, the contributions are written by psycholinguists and theoretical and computational linguists who take mutual advantage of progress in all disciplines. Linguists supply the facts and analyses psycholinguists base their models and experiments on; psycholinguists in turn confront linguistic models with psycholinguistic findings. Computational linguists build natural language processing systems on the basis of models and frameworks provided by theoretical linguists and, sometimes psycholinguists, and set up large corpora to test linguistic hypotheses. Besides the fascination for idioms that make up such a large part of our knowledge of language, interdisciplinarity is one of the attractions of investigations in idiomatic language and language processing.

⬚ **Prominent Feature Extraction for Sentiment Analysis** Basant Agarwal,Namita Mittal,2015-12-14 The objective of this monograph is to improve the performance of the sentiment analysis model by incorporating the semantic, syntactic and common-sense knowledge. This book proposes a novel semantic concept extraction approach that uses dependency relations between words to extract the features from the text. Proposed approach combines the semantic and common-sense knowledge for the better understanding of the text. In addition, the book aims to extract prominent features from the unstructured text by eliminating the noisy, irrelevant and redundant features. Readers will also discover a proposed method for efficient dimensionality reduction to alleviate the data sparseness problem being faced by machine learning model. Authors pay attention to the four main findings of the book : - Performance of the sentiment analysis can be improved by reducing the redundancy among the features. Experimental results show that minimum Redundancy Maximum Relevance (mRMR) feature selection technique improves the performance of the sentiment analysis by eliminating the redundant features. - Boolean Multinomial Naive Bayes (BMNB) machine learning algorithm with mRMR feature selection technique performs better than Support Vector Machine (SVM) classifier for sentiment analysis. - The problem of data sparseness is alleviated by semantic clustering of features, which in turn improves the performance of the sentiment analysis. - Semantic relations among the words in the text have useful cues for sentiment analysis. Common-sense knowledge in form of ConceptNet ontology acquires knowledge, which provides a better understanding of the text that improves the performance of the sentiment

analysis.

⏴?⏵ EuroWordNet: A multilingual database with lexical semantic networks Piek Vossen,2013-11-11 This book describes the main objective of EuroWordNet, which is the building of a multilingual database with lexical semantic networks or wordnets for several European languages. Each wordnet in the database represents a language-specific structure due to the unique lexicalization of concepts in languages. The concepts are inter-linked via a separate Inter-Lingual-Index, where equivalent concepts across languages should share the same index item. The flexible multilingual design of the database makes it possible to compare the lexicalizations and semantic structures, revealing answers to fundamental linguistic and philosophical questions which could never be answered before. How consistent are lexical semantic networks across languages, what are the language-specific differences of these networks, is there a language-universal ontology, how much information can be shared across languages? First attempts to answer these questions are given in the form of a set of shared or common Base Concepts that has been derived from the separate wordnets and their classification by a language-neutral top-ontology. These Base Concepts play a fundamental role in several wordnets. Nevertheless, the database may also serve many practical needs with respect to (cross-language) information retrieval, machine translation tools, language generation tools and language learning tools, which are discussed in the final chapter. The book offers an excellent introduction to the EuroWordNet project for scholars in the field and raises many issues that set the directions for further research in semantics and knowledge engineering.

⏴?⏵ Semantic Similarity from Natural Language and Ontology Analysis S⏴?⏵bastien Harispe,Sylvie Ranwez,Stefan Janaqi,2015-05-01 Artificial Intelligence federates numerous scientific fields in the aim of developing machines able to assist human operators performing complex treatments---most of which demand high cognitive skills (e.g. learning or decision processes). Central to this quest is to give machines the ability to estimate the likeness or similarity between things in the way human beings estimate the similarity between stimuli. In this context, this book focuses on semantic measures: approaches designed for comparing semantic entities such as units of language, e.g. words, sentences, or concepts and instances defined into knowledge bases. The aim of these measures is to

8

assess the similarity or relatedness of such semantic entities by taking into account their semantics, i.e. their meaning---intuitively, the words tea and coffee, which both refer to stimulating beverage, will be estimated to be more semantically similar than the words toffee (confection) and coffee, despite that the last pair has a higher syntactic similarity. The two state-of-the-art approaches for estimating and quantifying semantic similarities/relatedness of semantic entities are presented in detail: the first one relies on corpora analysis and is based on Natural Language Processing techniques and semantic models while the second is based on more or less formal, computer-readable and workable forms of knowledge such as semantic networks, thesauri or ontologies. Semantic measures are widely used today to compare units of language, concepts, instances or even resources indexed by them (e.g., documents, genes). They are central elements of a large variety of Natural Language Processing applications and knowledge-based treatments, and have therefore naturally been subject to intensive and interdisciplinary research efforts during last decades. Beyond a simple inventory and categorization of existing measures, the aim of this monograph is to convey novices as well as researchers of these domains toward a better understanding of semantic similarity estimation and more generally semantic measures. To this end, we propose an in-depth characterization of existing proposals by discussing their features, the assumptions on which they are based and empirical results regarding their performance in particular applications. By answering these questions and by providing a detailed discussion on the foundations of semantic measures, our aim is to give the reader key knowledge required to: (i) select the more relevant methods according to a particular usage context, (ii) understand the challenges offered to this field of study, (iii) distinguish room of improvements for state-of-the-art approaches and (iv) stimulate creativity toward the development of new approaches. In this aim, several definitions, theoretical and practical details, as well as concrete applications are presented

⍰ Recent Advances in Natural Language Processing Ruslan Mitkov,Nicolas Nicolov,1997-01-01 This volume is based on contributions from the First International Conference on ⍰ Recent Advances in Natural Language Processing⍰ (RANLP'95) held in Tzigov Chark, Bulgaria, 14-16 September 1995. This conference was one of the most important and competitively reviewed conferences in Natural Language Processing (NLP) for 1995 with submissions from more than 30 countries. Of the 48 papers presented at RANLP'95, the best

(revised) papers have been selected for this book, in the hope that they reflect the most significant and promising trends (and latest successful results) in NLP. The book is organised thematically and the contributions are grouped according to the traditional topics found in NLP: morphology, syntax, grammars, parsing, semantics, discourse, grammars, generation, machine translation, corpus processing and multimedia. To help the reader find his/her way, the authors have prepared an extensive index which contains major terms used in NLP; an index of authors which lists the names of the authors and the page numbers of their paper(s); a list of figures; and a list of tables. This book will be of interest to researchers, lecturers and graduate students interested in Natural Language Processing and more specifically to those who work in Computational Linguistics, Corpus Linguistics and Machine Translation.

② ② Linguistic Inquiry and Word Count James W. Pennebaker,M. E. Francis,1999-04-01 Language, whether spoken or written, is an important window into people's emotional and cognitive worlds. Text analysis of these narratives, focusing on specific words or classes of words, has been used in numerous research studies including studies of emotional, cognitive, structural, and process components of individuals' verbal and written language. It was in this research context that the LIWC program was developed. The program analyzes text files on a word-by-word basis, calculating percentage words that match each of several language dimensions. Its output is a text file that can be opened in any of a variety of applications, including word processors and spreadsheet programs. The program has 68 pre-set dimensions (output variables) including linguistic dimensions, word categories tapping psychological constructs, and personal concern categories, and can accommodate user-defined dimensions as well. Easy to install and use, this software offers researchers in social, personality, clinical, and applied psychology a valuable tool for quantifying the rich but often slippery data provided in the form of personal narratives. The software comes complete on one 31/2 diskette and runs on any Windows-based computer.
