Human Factors and Ergonomics in Consumer Product Design Waldemar

Karwowski, Marcelo M. Soares, Neville A. Stanton, 2011-06-22 Every day we interact with thousands of consumer products. We not only expect them to perform their functions safely, reliably, and efficiently, but also to do it so seamlessly that we don't even think about it. However, with the many factors involved in consumer product design, from the application of human factors and ergonomics principles to reducing risks of malfunction and the total life cycle cost, well, the process just seems to get more complex. Edited by well-known and well-respected experts, the two-volumes of Handbook of Human Factors and Ergonomics in Consumer Product Design simplify this process. The second volume, Human Factors and Ergonomics in Consumer Product Design: Uses and Applications, discusses challenges and opportunities in the design for product safety and focuses on the critical aspects of human-centered design for usability. The book contains 14 carefully selected case studies that demonstrate application of a variety of innovative approaches that incorporate Human Factor and Ergonomics (HF/E) principles, standards, and best practices of user-centered design, cognitive psychology, participatory macro-ergonomics, and mathematical modeling. These case studies also identify many unique aspects of new product development projects, which have adopted a user-centered design paradigm as a way to attend to user requirements. The case studies illustrate how incorporating HF/E principles and knowledge in the design of consumer products can improve levels of user satisfaction, efficiency of use, increase comfort, and assure safety under normal use as well as foreseeable misuse of the product. The book provides a comprehensive source of information regarding new methods, techniques, and software applications for consumer product design.

Integral Dynamics Ronnie Lessem, Alexander Schieffer, Samuel D. Rima, 2016-05-23
The theory of integral dynamics is based on the view that the development of individual leaders or entrepreneurs requires the simultaneous

development of institutions and societies. It seeks a specific way forward for each society, fundamentally different from, but drawing on, its past. Nearly every natural science has been transformed from an analytically-based approach to a dynamic one: now it is time for society and culture to follow suit locally and globally. Each culture, discipline and person is incomplete and is in need of others in order to develop and evolve. This book sets out a curriculum for a new integral, trans-cultural and trans-disciplinary area of study, inclusive of, but extending beyond, economics and enterprise. It embraces a trans-personal perspective, linking self with community, enterprise and society, and focusing on the vital relationship between local identity and global integrity. For the government policy maker, the enlightened business practitioner, and the student and researcher into economics and enterprise, the new discipline is set out here in complete detail by a multi-national team of Gower's Transformation and Innovation Series authors. Illuminated with examples relating the conceptual to the practical, this is a text, not for a pre-modern, modern, or even post-modern era, but for what has been called our trans-modern age.

Undocumented Secrets of MATLAB-Java Programming Yair M. Altman, 2011-12-05
For a variety of reasons, the MATLAB®-Java interface was never fully documented. This is really quite unfortunate: Java is one of the most widely used programming languages, having many times the number of programmers and programming resources as MATLAB. Also unfortunate is the popular claim that while MATLAB is a fine programming platform for prototyping, it is not suitable for real-world, modern-looking applications. Undocumented Secrets of MATLAB®-Java Programming aims to correct this misconception. This book shows how using Java can significantly improve MATLAB program appearance and functionality, and that this can be done easily and even without any prior Java knowledge. Readers are led step-by-step from simple to complex customizations. Code snippets, screenshots, and numerous online references are provided to enable the utilization of this book as both a sequential tutorial and as a random-access reference suited for immediate use. Java-savvy readers will find it easy to tailor code samples for their particular needs; for Java newcomers, an introduction to Java and numerous online references are provided. This book demonstrates how The MATLAB programming environment relies on Java for numerous tasks, including networking, data-processing algorithms and graphical user-interface (GUI) We can use MATLAB for easy access to external Java functionality, either third-party or user-created Using Java, we can extensively customize the MATLAB environment and application GUI, enabling the creation of visually appealing and usable applications
