Stitching the World: Embroidered Maps and Women's Geographical Education Professor Judith A Tyner, 2015-04-28 The period from the late eighteenth century until about 1840 coincided with major changes in educational theories and practices, especially for girls, and this book uses needlework maps and globes to chart a broader discussion of women's geographic education. In this light, map samplers and embroidered globes represent a transition in women's education from 'accomplishments' in the eighteenth century to

challenging geographic education and conventional map drawing in schools and academies of the second half of the nineteenth century.

The Location of Religion Kim Knott, 2015-08-12
The ways in which humans interact with their location is an important topic within sociological studies of religion. It is integral to the place of religion in secular society. 'The Location of Religion: A Spatial Analysis' offers an overview of the ways in which religion can be located within social, cultural and physical space. It examines contemporary spatial theory - notably the work of the influential sociologist Henri Lefebvre - and the many disciplines that have contributed to the spatial study of religion. This volume will be invaluable to all those interested in the role of religion in spatial analysis.

Assessment in Geographical Education: An International Perspective Theresa Bourke, Reece Mills, Rod Lane, 2022-02-27 In recent years there has been increased attention paid to the importance of assessment in Geographical Education, the chosen subject for this book. Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students, teachers, parents and policymakers. To be effective, assessment needs to be valid, reliable and fair. Validity is about ensuring that we assess what we claim we are assessing. Reliability is about measuring performance and understanding in a consistent way. Without validity and reliability, assessment is

unlikely to provide equitable opportunities for students to demonstrate what they know and can do. As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master. We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning. While there is a substantial literature on evidence-based assessment in secondary school contexts, research exploring best-practice assessment in geography is rare. This is a concern given the distinctive nature of geography and the important role of assessment in the learning process. This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography. The chapters are written by leading researchers in Geographical Education from across the globe. These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia, USA, South Korea, Germany, Switzerland and Singapore. What unifies the work in this book, is that each chapter focuses on a key feature of the discipline of geography, providing scholarly examples of evidence-based practices for assessing student's knowledge and skills.

Choosing a Map Projection Miljenko Lapaine, E. Lynn Uery, 2017-04-04 This book offers a much-needed critical approach to the intelligent use of the wide variety of map projections that are rapidly and inexpensively available today. It also discusses the distortions that are immanent in any map projection. A well-chosen map projection is one in which extreme distortions are smaller than those in any other projection used to map the same area and in which the map properties match its purpose. Written by leading experts in the field,

including W. Tobler, F.C. Kessler, S.E. Battersby, M.P. Finn, K.C. Clarke, V.S. Tikunov, H. Hargitai, B. Jenny and N. Frančula. This book is designed for use by laymen. The book editors are M. Lapaine and E.L. Usery, Chair and Vice-Chair, respectively, of the ICA Commission on Map Projections for the period 2011-2015.

Having Fun with Maps and Globes Abraham Resnick, 2000-05-26 The primary purpose of his handbook is to provide educators with a variety of

proven activities to make learning map and globe skills both enjoyable and meaningful for your students. The activities, which include cross-curriculum, can be used with multiple grade levels, small groups, or individually. Having Fun with Maps and globes is organized into six parts. Part One introduces you to the basic goals of a Map and Globe Skills Program and concludes with some general Tips for Teachers. Part Two provides activities for teaching the basic concepts of maps and globes. Because the ability to read and make maps involves many individual skills, the activities in this section are organized into several categories or subsets of skills. For each subset, several fully developed activities are presented, along with a grab-bag of additional activities that can be used in a stand-alone map and globe unit or to reinforce general map skills. Because map and globe skills support other curriculum areas besides social studies, Part Three provides activities organized by subject area. This allows you to locate the subject you are teaching and access several related map and globe skill activities. Such cross-curriculum tasks will reinforce art, math, reading, science, language, and thinking skills. For easy access, all student activity sheets (called Supplements in this manual) are located in Part Four of the handbook. Part Five lists currently available resources for teachers and students. Beyond the standard lists of print materials, the author has provided sources for multimedia kits and computer software that will enrich anyone's program. An appendix, which includes map masters, a glossary of terms, and comparison charts, concludes the handbook. Although these materials are mentioned in various activities throughout the book, here they are more accessible as a reference and as a source from which to draw in developing your own lessons, or an entire school program. Because of

the wide range of resources Having Fun with Maps and Globes provides, this handbook is a wonderful companion to the supplementary materials you presently use in your school curriculum.

Meta Incognita: a discourse of discovery - volume 1 Thomas H. B. Symons, Stephen Alsford, Chris Kitzan, 1999-01-01 The Meta Incognita Project was initiated to cast new light on the Arctic voyages of Martin Frobisher and their significance for the histories of North America and Britain. Although the Elizabethan venture failed to discover a northwest passage to mines and precious metals, and to establish a colony in the future Canadian Arctic, it left valuable legacies.

Navigating by the Southern Cross Kenneth Morgan, 2021-01-28 In this comprehensive study, Kenneth Morgan provides an authoritative account of European exploration and discovery in Australia. The book presents a detailed chronological overview of European interests in the Australian continent, from initial speculations about the 'Great Southern Land' to the major hydrographic expeditions of the 19th century. In particular, he analyses the early crossings of the Dutch in the 17th century, the exploits of English 'buccaneer adventurer' William Dampier, the famous voyages of James Cook and Matthew Flinders, and the little-known French annexation of Australia in 1772. Introducing new findings and drawing on the latest in historiographical research, this book situates developments in navigation, nautical astronomy and cartography within the broader contexts of imperial, colonial, and maritime history.

The Power of Maps Denis Wood, John Fels, 1992-01-01 This volume ventures into terrain where even the most sophisticated map fails to lead--through the mapmaker's bias. Denis Wood shows how maps are not impartial reference objects, but rather instruments of communication, persuasion, and power. Like paintings, they express a point of view. By connecting us to a reality that could not exist in the absence of maps--a world of property lines and voting rights, taxation districts and enterprise zones--they embody and project the interests of their creators. Sampling the scope of maps available today, illustrations include Peter Gould's AIDS map, Tom Van Sant's map of the earth, U.S. Geological Survey maps, and a child's drawing of

the world. THE POWER OF MAPS was published in conjunction with an exhibition at the Cooper Hewitt Museum, the Smithsonian Institution's National Museum of Design.
