Like a Virgin Richard Branson,2012-09-25 It's business school, the Branson way. Whether you're interested in starting your own business, improving your leadership skills, or simply looking for inspiration from one of the greatest entrepreneurs of our time, Richard Branson has the answers. Like a Virgin brings together some of his best advice, distilling the experiences and insights that have made him one of the world's most recognized and respected business leaders. In his trademark thoughtful and encouraging voice, Branson shares his knowledge like a close friend. He'll teach you how to be more innovative, how to lead by listening, how to enjoy your work, and much more. In hindsight, Branson is thankful he never went to business school. Had he conformed to the conventional dos and don'ts of starting a business, would there have been a Virgin Records? A Virgin Atlantic? So many of Branson's achievements are due to his unyielding determination to break the rules and rewrite them himself. Here's how he does it.

Statistics for Linguists: An Introduction Using R Bodo Winter, 2019-10-30 *Statistics for Linguists: An Introduction Using R* is the first statistics textbook on linear models for linguistics. The book covers simple uses of linear models through generalized models to more advanced approaches, maintaining its focus on conceptual issues and avoiding excessive mathematical details. It contains many applied examples using the R statistical programming environment. Written in an accessible tone and style, this text is the ideal main resource for graduate and advanced undergraduate students of Linguistics statistics courses as well as those in other fields, including Psychology, Cognitive Science, and Data Science.

Statistical Rethinking Richard McElreath, 2018-01-03 *Statistical Rethinking: A Bayesian Course with Examples in R and Stan* builds readers' knowledge of and confidence in statistical modeling. Reflecting the need for even minor programming in today's model-based statistics, the book pushes readers to perform step-by-step calculations that are usually automated. This unique computational approach

ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work. The text presents generalized linear multilevel models from a Bayesian perspective, relying on a simple logical interpretation of Bayesian probability and maximum entropy. It covers from the basics of regression to multilevel models. The author also discusses measurement error, missing data, and Gaussian process models for spatial and network autocorrelation. By using complete R code examples throughout, this book provides a practical foundation for performing statistical inference. Designed for both PhD students and seasoned professionals in the natural and social sciences, it prepares them for more advanced or specialized statistical modeling. Web Resource The book is accompanied by an R package (rethinking) that is available on the author's website and GitHub. The two core functions (map and map2stan) of this package allow a variety of statistical models to be constructed from standard model formulas.

Entertainment Computing - ICEC 2004 Matthias Rauterberg, 2004-08-23 The advancement of information and communication technologies (ICT) has enabled broad use of ICT and facilitated the use of ICT in the private and personal domain. ICT-related industries are directing their business targets to home applications. Among these applications, entertainment will differentiate ICT applications in the private and personal market from the office. Comprehensive research and development on ICT - applications for entertainment will be different for the promotion of ICT use in the home and other places for leisure. So far

engineering research and development on entertainment has never been really established in the academic communities. On the other hand entertainment-related industries such as the video and computer game industries have been growing rapidly in the last 10 years, and today the entertainment computing business outperforms the turnover of the movie industry. Entertainment robots are drawing the attention of young people. The event called RoboCup has been increasing the number of participants year by year. Entertainment technologies cover a broad range of products and services: movies, music, TV (including upcoming interactive TV), VCR, VoD (including music on demand), computer games, game consoles, video arcades, gambling machines, the Internet (e. g. , chat rooms, board and card games, MUD), intelligent toys, edutainment, simulations, sport, theme parks, virtual reality, and upcoming service robots.

The field of entertainment computing focuses on users' growing use of entertainment technologies at work, in school and at home, and the impact of this technology on their behavior. Nearly every working and living place has computers, and over two-thirds of children in industrialized countries have computers in their homes as well.
