Portal Hypertension Kunio Okuda,Jean-Pierre Benhamou,2013-11-09 Portal hypertension is the abnormal pathophysiologic state that develops in liver cirrhosis and certain other disorders with characteristic clinical and hemodynamic features. There has been great progress in our understanding and management of portal hypertension, particularly in the diagnostic and therapeutic approaches. The so-called Banti's syndrome, a disorder whose existence had long been questioned, is now a well-defined portal hypertensive disease. The recently introduced Doppler flowmetry is currently yielding new information on portal hemodynamics. Endoscopic sclerotherapy and beta-blockers have come to be widely used in the management and prevention of variceal bleeding. In spite of all these advances, a number of unsolved questions remain, such as whether sclerotherapy, pharmacotherapy or surgery is warranted for prevention of bleeding, which is more effective as an elective treatment, the surgical or endoscopic approach, and whether surgical portacaval shunt should be totally replaced by selective shunt operations. These new developments and problems are clearly and comprehensively described and discussed by the foremost authorities in 44 chapters, which are divided into five sections: 1) Pathophysiology, 2) Hemodynamic Investigations, 3) Imaging Investigations, 4) Clinical and Pathological Features, and 5) Esophageal and Gastrointestinal Bleeding. The primary goal of this monograph, to provide a framework of pathophysiology of portal hypertension with authoritative descriptions of the clinical and laboratory manifestations of various portal hypertensive disorders, has clearly been achieved by these excellent contributions.

Denmark International Monetary Fund. European Dept.,2016-06-27 This paper examines the selected issues related to the economy of Denmark: divergence in house prices, house prices in Denmark's cities, macroprudential policies, and product market reform and firm productivity. Recent house price developments in Denmark have been characterized by a growing divergence between different parts of the country, with big cities experiencing much more rapid price increases than other parts. House price booms and busts in Denmark, like in many other countries, are a big-city phenomenon. Macroprudential policies can help contain risks for households, the financial system, and the broader economy, but they should be carefully calibrated to avoid an undue drag on growth.

Voting Counts Law Commission of Canada,2004 Through the electoral process, citizens grant authority to their governments and to the laws governments enact. In recent years more and more Canadians have expressed their desire for improvements to our system of democratic governance, and to the mechanisms through which they can participate in government decision-making processes...This report aims to clarify the debates surrounding electoral reform: it reviews the arguments advanced to justify change, evaluates their relevance and cogency, and proposes a new model. -- p. vii.
