Applied Computer Science for GGOS Observatories Alexander N.J. Neidhardt,2017-08-08 This book combines elementary theory from computer science with real-world challenges in global geodetic observation, based on examples from the Geodetic Observatory Wettzell, Germany. It starts with a step-by-step introduction to developing stable and safe scientific software

to run successful software projects. The use of software toolboxes is another essential aspect that leads to the application of generative programming. An example is a generative network middleware that simplifies communication. One of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques. The complete software design of a satellite laser ranging system is taken as an example. Such automated systems are then combined for global interaction using secure communication tunnels for remote access. The network of radio telescopes is used as a reference. Combined observatories form coordinated multi-agent systems and offer solutions for operational aspects of the Global Geodetic Observing System (GGOS) with regard to "Industry 4.0".

  Jane Austen's Charlotte Julia Barrett,2002 Shortly before she died, Jane

Austen started working on a new novel. Never finished, it was bequeathed to her favourite niece and remained unknown until 1871, when her nephew referred to it in his Memoir of Jane Austen. While her nephew did not consider it worthy of publishing, novelist and critic E M Forester firmly disagreed, stating that the work would undoubtedly throw light on the last phase of the great novelist if published. There have been a few attempts to complete this work, but non have captured the true magic of an Austen novel until now. Originally named The Brothers by Austen and dubbed Sanditon by her family, this 'new' novel promises to bring to life another Austen heroine worthy of keeping company with the likes of Elizabeth, Emma, and Anne. Her name is Charlotte.
