*The Design of Intelligent Agents* Jörg P. Müller,1996-11-27 This monograph presents a comprehensive state-of-the-art survey on approaches to the design of intelligent agents. On the theoretical side, the author identifies a set of general requirements for autonomous interacting agents and provides an essential step towards understanding the principles of intelligent agents. On the practical side, the novel agent architecture InteRRaP is introduced: the detailed description and evaluation of this architecture is an ideal guideline and case study for software engineers or researchers faced with the task of building an agent system. The book uniquely bridges the gap between theory and practice; it addresses active and novice researchers as well as practitioners interested in applicable agent technology.

**Object-Process Methodology** Dov Dori,2012-12-06 Object-Process Methodology (OPM) is an intuitive approach to systems engineering. OPM is a generic, domain independent approach that is applicable almost anywhere in systems engineering.

*Agent Sourcebook* Alper Caglayan,Colin Harrison,1997-06-16 In this groundbreaking book, authors Caglayan and Harrison go beyond the hype and sci-fi scenarios to provide IS managers, developers, and corporate decision-makers with an accurate picture of what agents can and cannot do. They clearly explain the underlying technology, including knowledge representation, inferencing, and learning, and describe how agents can be used to improve efficiency while dramatically cutting the cost of doing work.

*Web Dynamics* Mark Levene,Alexandra Poulouvassilis,2013-03-09 The World Wide Web has become a ubiquitous global tool, used for finding information, communicating ideas, carrying out distributed computation and conducting business, learning and science. The Web is highly dynamic in both the content and quantity of the information that it encompasses. In order to fully exploit its enormous potential as a global repository of information, we need to understand how its size, topology and content are evolving. This then allows the development of new techniques for locating and retrieving information that are better able to adapt and scale to its change and growth. The Web's users are highly diverse and can access the Web from a variety of devices and interfaces, at different places and times, and for varying purposes. We thus also need techniques for personalising the presentation and content of Web based information depending on how it is being accessed and on the specific user's requirements. As well as being accessed by human users, the Web is also accessed by applications. New applications in areas such as e-business, sensor networks, and mobile and ubiquitous computing need to be able to detect and react quickly to events and changes in Web-based information. Traditional approaches using query-based 'pull' of information to find out if events or changes of interest have occurred may not be able to scale to the quantity and frequency of events and changes being generated, and new 'push' -based techniques are needed.

**Saint Among Savages** Francis Xavier Talbot,2002 Saint among Savages tells the remarkable story of St. Isaac Jogues, a French Jesuit who was killed by Mohawks while serving as a missionary in New France. Coming from a upper middle class life in Orleans, he knew from an early age that he wanted to be a priest and serve abroad as a missionary to risk his life in order to save souls. Along with several others, collectively known as the North American Martyrs, he followed his dreams and met death in the American wilderness. Living with the Huron people in what is now Ontario, he was captured by Mohawk warriors and tortured and held captive for over a year. He escaped back to France with help from the Dutch in New York, and remarkably insisted on going back to New France, even though he knew what he might be facing. Besides Jogues' life there is also a lot of material about the lives and customs of the Native American peoples who lived along the St. Lawrence River.

Numerical Approximation of Partial Differential Equations Eduardo L. Ortiz,1987 This selection of papers is concerned with problems arising in the numerical solution of differential equations, with an emphasis on partial differential equations. There is a balance between theoretical studies of approximation processes, the analysis of specific numerical techniques and the discussion of their application to concrete problems relevant to engineering and science. Special consideration has been given to innovative numerical techniques and to the treatment of three-dimensional and singular problems. These topics are discussed in several of the invited papers. The contributed papers are divided into five parts: techniques of approximation theory which are basic to the numerical treatment of differential equations; numerical techniques based on discrete processes; innovative methods based on polynomial and rational approximation; variational inequalities, conformal transformation and asymptotic techniques; and applications of differential equations to problems in science and engineering.
