*The Oil Palm* R. H. V. Corley, P. B. H. Tinker, 2015-10-06 The oil palm is the world's most valuable oil crop. Its production has increased over the decades, reaching 56 million tons in 2013, and it gives the highest yields per hectare of all oil crops. Remarkably, oil palm has remained profitable through periods of low prices. Demand for palm oil is also expanding, with the edible demand now complemented by added demand from biodiesel producers. The Oil Palm is the definitive reference work on this important crop. This fifth edition features new topics - including the conversion of palm oil to biodiesel, and discussions about the impacts of palm oil production on the environment and effects of climate change – alongside comprehensively revised chapters, with updated references throughout. The Oil Palm, Fifth Edition will be useful to researchers, plantation and mill managers who wish to understand the science underlying recommended practices. It is an indispensable reference for agriculture students and all those working in the oil palm industry worldwide.

Special Economic Zones in the Indonesia–Malaysia–Thailand Growth Triangle Asian Development Bank, 2022-01-01 This publication explains why Indonesia, Malaysia, and Thailand need to ramp up cooperation to boost their special economic zones (SEZ) and spur sustainable growth. Mapping out and assessing the economic performance of SEZs across the subregion, it highlights the threats they face from factors including growing competition for foreign investment, international trade disputes, and the rise of digital technologies. The publication stresses the need for policymakers and stakeholders to intensify their strategic collaboration in order to make their SEZs more competitive. Against the backdrop of COVID-19, it details a range of practical steps designed to increase trade, create jobs, and build economic resilience across the three countries.

*Date Palm Genetic Resources and Utilization* Jameel M. Al-Khayri, Shri Mohan Jain, Dennis V. Johnson, 2015-03-20 This important 2-volume reference book is the first comprehensive resource reflecting the current global status and prospects of date palm cultivation by country. This volume covers Africa and the Americas. Countries included are: Egypt, Algeria, Sudan, Tunisia, Libya, Morocco, Mauritania, Niger, Cameroon, Djibouti, Chad, Mali, Somalia, Ethiopia, Burkina Faso and Senegal, as well as the United States of America and the South American countries Chile and Peru. Topics discussed are: cultivation practices; genetic resources and breeding; conservation and germplasm banks; cultivar classification and identification based on morphological and molecular markers; micropropagation and progress toward scale-up production; and advances in dates processing and marketing. Chapters are supported by tables and color photographs. Appendixes

summarize traits and distribution of major cultivars, commercial resources of offshoots and in vitro plants; and institutions and scientific societies concerned with date palm.

**The non-industrial palm oil sector in Cameroon** Raymond Ndip Nkongho, Laurène Feintrenie, Patrice Levang, 2014-07-15 Oil palm (*Elæis guineensis* Jacq.) is not new to Cameroon, since it is indigenous to the countries bordering the Gulf of Guinea. People in the rainforest region of Cameroon used to harvest fresh fruit bunches (FFB) from the wild dura variety to produce palm oil and kernel oil, and fell and tap old stands of both dura and pisifera varieties to produce palm wine, which is a much cherished liquor. The hybrid tenera oil palm variety produces the highest yield -up to eight times more- compared to other vegetable oil crops like soybean, sunflower or rapeseed (Mathew et al. 2007; Feintrenie and Rafflegeau 2012; Jacquemard 2012).

**The Date Palm Genome, Vol. 1** Jameel M. Al-Khayri, S. Mohan Jain, Dennis V. Johnson, 2021-07-01 This book is the first volume of a comprehensive assemblage of contemporary knowledge relevant to genomics and other omics in date palm. Volume 1 consists of 11 chapters arranged in 3 parts grouped according to subject. Part I, Biology and Phylogeny, focuses on date palm biology, evolution and origin. Part II, Biodiversity and Molecular Identification, covers conformity of in vitro derived plants,

molecular markers, barcoding, pollinizer genetics and gender determination. Part III, Genome Mapping and Bioinformatics, addresses genome mapping of nuclear, chloroplast and mitochondrial DNA, in addition to a chapter on progress made in date palm bioinformatics. This volume represents the efforts of 30 international scientists from 10 countries and contains 78 figures and 30 tables to illustrate presented concepts. Volume 2 is published under the title: Omics and Molecular Breeding.

Managing oil palm landscapes Lesley Potter, 2015-05-26 This study comprises a review of oil palm development and management across landscapes in the tropics. Seven countries have been selected for detailed analysis using surveys of the current literature, mainly spanning the last fifteen years. Indonesia and Malaysia are the obvious leaders in terms of area planted and levels of production and export, but also in literature generated on social and environmental challenges. In Latin America, Colombia is the dominant producer with oil palm expanding in disparate landscapes with a strong focus on palm oil-based biodiesel; and small-scale growers and companies in Peru and Brazil offer contrasting ways of inserting oil palm into the Amazon. Nigeria and Cameroon represent African nations with traditional groves and old plantations in which foreign "land grabs" to establish new oil palm have recently occurred.

The Coconut Palm (Cocos nucifera L.) - Research and Development Perspectives V. Krishnakumar, P. K. Thampan, M. Achuthan Nair, 2019-02-15 Since the publication of The coconut palm - A monograph in 1960, considerable information has been accrued on the crop through work at research institutes, international organisations and development agencies. Although coconut cultivation is spread over 93 countries, providing employment and creating livelihood opportunities to 64 million families around the globe, smallholder coconut farmers are now facing numerous challenges. The wide gap between the potential and actual yield is a major concern, and as such it is necessary to disseminate knowledge in order to implement research findings. Coconut research in India, one of the leading coconut producing countries, is celebrating its centenary, making this an opportune time to review the research and development advances and the relevant technologies. This detailed, comprehensive book covers all aspects of coconut, from the origins to cultivation, breeding, physiology and value addition, as well as subjects of topical interest like nutrition and health, biotechnology, and climate change and carbon sequestration. Written by leading experts in the fields it emphasises that the livelihood of the small coconut landholders is the ultimate aim of scientists and developmental

agencies, and outlines various important strategies to make coconut farming more remunerative globally. It discusses work in all the major coconut growing countries and outlines suggestions for international cooperation. Research work on the crop is comparatively difficult because of its perennial nature, longevity, height, long juvenile phase, large sized nuts, cross pollination and seed propagation. As these special features necessitate greater investment of resources, time and land, it is all the more imperative that research is not duplicated and the information and experience becoming available around the world is shared so that it can be fully utilised. In this context periodic publications, compiling all the available information on coconut assume greater significance. This book is therefore of great value to researchers, students, extension workers, developmental agencies and progressive farmers.

*Handbook of Major Palm Pests* Victoria Soroker, Stefano Colazza, 2017-01-11 *Handbook of Major Palm Pests: Biology and Management* contains the most comprehensive and up-to-date information on the red palm weevil and the palm borer moth, two newly emergent invasive palm pests which are adversely affecting palm trees around the world. It provides state-of-the-art scientific information on the ecology, biology, and management of palm pests from a global group of experts in the field. An essential compendium for anyone working with or studying palms, it is dedicated to the detection, eradication, and containment of these invasive species, which threaten the health and very existence of global palm crops.

**The potential of oil palm and forest plantations for carbon sequestration on degraded land in Indonesia** Syahrinudin, 2005 Plant biomass represents a sink for atmospheric carbon dioxide, which is one of the most important greenhouse gases and which is assumed to contribute more than half of the global warming. Establishing tree plantations or perennial crops on degraded land is an effective way to reduce atmospheric carbon by building up terrestrial carbon stocks, not only in the living biomass, but also in the soil. By converting *Imperata cylindrica* grassland into tree plantations (*Acacia mangium* or oil palm), aboveground biomass carbon can be increased about 20-fold and below ground biomass carbon up to 8-fold, while soil carbon can almost be doubled.

*Red Palm Weevil: Guidelines on management practices* Food and Agriculture Organization of the United Nations, 2020-02-12 Since gaining a foothold on date palm in the Near East during the mid-1980s, the red palm weevil (RPW) *Rhynchophorus ferrugineus* Olivier has spread rapidly over the last three decades and is now a major pest of palms in a diverse range of agroecosystems worldwide.

In most of the countries affected, failure to manage RPW can be attributed to a lack of awareness about this pest and to lack of systematic and coordinated control actions or management strategies that involve all stakeholders. These guidelines have been developed by FAO to support all those involved in the day-to-day management of RPW in the field (including farmers and pest-management professionals), researchers, and the decision-makers and administrative stakeholders who support the implementation of integrated pest management (IPM) strategies for RPW. Written by internationally recognized RPW experts, the guidelines describe the biology and host range of RPW and address all aspects of RPW-IPM, including surveillance, phytosanitary measures, early detection, pheromone trapping protocols, preventive and curative chemical treatments, removal and safe disposal of severely infested palms, and best agricultural practices to mitigate attacks by this lethal pest of palms.
