Integration of IBM Aspera Sync with IBM Spectrum Scale: Protecting and Sharing Files Globally Nils Haustein,Jose M Gomez,Benjamin C Forsyth,IBM Redbooks,2019-03-29 Economic globalization requires data to be available globally. With most data stored in file systems, solutions to make this data globally available become more important. Files that are in file systems can be protected or shared by replicating these files to another file system that is in a remote location. The remote location might be just around the corner or in a different country. Therefore, the techniques that are used to protect and share files must account for long distances and slow and unreliable wide area network (WAN) connections. IBM® Spectrum Scale is a scalable clustered file system that can be used to store all kinds of unstructured data. It provides open data access by way of Network File System (NFS); Server Message Block (SMB); POSIX Object Storage APIs, such as S3 and OpenStack Swift; and the Hadoop Distributed File System (HDFS) for accessing and sharing data. The IBM Aspera® file transfer solution (IBM Aspera Sync) provides predictable and reliable data transfer across large distance for small and large files. The combination of both can be used for global sharing and protection of data. This IBM RedpaperTM publication describes how IBM Aspera Sync can be used to protect and share data that is stored in IBM SpectrumTM Scale file systems across large distances of several hundred to thousands of miles. We also explain the integration of IBM Aspera Sync with IBM Spectrum ScaleTM and differentiate it from solutions that are built into IBM Spectrum Scale for protection and sharing. We also describe different use

cases for IBM Aspera Sync with IBM Spectrum Scale.

English in the Disciplines Christoph A Hafner,Lindsay Miller,2018-08-06 The context for the teaching and learning of English for specific disciplinary purposes is undergoing profound changes under the influence of economic globalization and new digital communication technologies. English in the Disciplines demonstrates how fundamental principles of ESP, to tailor language learning materials to the needs of specific groups of learners, can be adapted to new contexts of learning in the digital age. Based on sustained research into students' experiences in an ESP context in Hong Kong, this volume provides an empirically grounded and practical methodology to ESP learning and course design and features: • mixed-method case studies; • links between theory and practice, with plentiful examples of teaching materials and learning activities; • recognition of the effect of new technologies and globalization on the practice of ESP, highlighting problems and providing practical solutions; • a new pedagogical model for ESP course design, addressing multiple dimensions relevant to today's ESP learners including learner autonomy, genre, multimodality and digital literacies, plurilingual practices, and project-based learning and collaboration. English in the Disciplines provides key reading for anyone studying and researching this topic.

Sharing and Hiding Religious Knowledge in Early Judaism, Christianity, and Islam Mladen Popović,Lautaro Roig Lanzillotta,Clare Wilde,2018-08-21 Few studies focus on the modes of knowledge transmission (or concealment), or the trends of continuity or change from the Ancient to the Late Antique worlds. In Antiquity, knowledge was cherished as a scarce good, cultivated through the close teacher-student relationship and often preserved in the closed circle of the initated. From Assyrian

and Babylonian cuneiform texts to a Shi'ite Islamic tradition, this volume explores how and why knowledge was shared or concealed by diverse communities in a range of Ancient and Late Antique cultural contexts. From caves by the Dead Sea to Alexandria, both normative and heterodox approaches to knowledge in Jewish, Christian and Muslim communities are explored. Biblical and qur'anic passages, as well as gnostic, rabbinic and esoteric Islamic approaches are discussed. In this volume, a range of scholars from Assyrian studies to Jewish, Christian and Islamic studies examine diverse approaches to, and modes of, knowledge transmission and concealment, shedding new light on both the interconnectedness, as well as the unique aspects, of the monotheistic faiths, and their relationship to the ancient civilisations of the Fertile Crescent.

Scripting with Objects Avinash C. Kak,2012-07-16 Object-Oriented scripting with Perl and Python Scripting languages are becoming increasingly important for software development. These higher-level languages, with their built-in easy-to-use data structures are convenient for programmers to use as glue languages for assembling multi-language applications and for quick prototyping of software architectures. Scripting languages are also used extensively in Web-based applications. Based on the same overall philosophy that made Programming with Objects such a wide success, Scripting with Objects takes a novel dual-language approach to learning advanced scripting with Perl and Python, the dominant languages of the genre. This method of comparing basic syntax and writing application-level scripts is designed to give readers a more comprehensive and expansive perspective on the subject. Beginning with an overview of the importance of scripting languages—and how they differ from mainstream systems programming languages—the book explores: Regular expressions for string processing The notion of a class in Perl and Python Inheritance and polymorphism in Perl and Python Handling exceptions Abstract classes and methods in Perl and

Python Weak references for memory management Scripting for graphical user interfaces Multithreaded scripting Scripting for network programming Interacting with databases Processing XML with Perl and Python This book serves as an excellent textbook for a one-semester undergraduate course on advanced scripting in which the students have some prior experience using Perl and Python, or for a two-semester course for students who will be experiencing scripting for the first time. Scripting with Objects is also an ideal resource for industry professionals who are making the transition from Perl to Python, or vice versa.

Intelligent Agents for Telecommunications Applications Sahin Albayrak,1998 Intelligent agent and distributed AI (DAI) approaches attach specific conditions to cooperative exchanges between intelligent systems, that go far beyond simple functional interoperability. Ideally, systems that pursue local or global goals, coordinate their actions, share knowledge, and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse-grained systems. The infrastructure of telecommunications is a world in transition. There are a number of trends that contribute to this: convergence of traditional telephony and data network worlds, blurring of boundaries between public and private networks, complementary evolution of wireline, wireless, and cable network infrastructures, the emergence of integrated broadband multimedia networks and, of course, the information superhighway. Up to now, despite the effort that has gone into this area, the field of intelligent agents research has not yet led to many fielded systems. Telecommunications applications pose strong requirements to agents such as: reliability, real-time performance, openness, security management and other integrated management, and mobility. In order to fulfil their promise, intelligent agents need to be fully dependable and typically require an integrated set of capabilities. This is the challenge that exists for intelligent agents technology in this application domain.

Scripting the Moves Joanne W. Golann,2021-06-08 An inside look at a no-excuses charter school that reveals this educational model's strengths and weaknesses, and how its approach shapes students Silent, single-file lines. Detention for putting a head on a desk. Rules for how to dress, how to applaud, how to complete homework. Walk into some of the most acclaimed urban schools today and you will find similar recipes of behavior, designed to support student achievement. But what do these "scripts" accomplish? Immersing readers inside a "no-excuses" charter school, Scripting the Moves offers a telling window into an expanding model of urban education reform. Through interviews with students, teachers, administrators, and parents, and analysis of documents and data, Joanne Golann reveals that such schools actually dictate too rigid a level of social control for both teachers and their predominantly low-income Black and Latino students. Despite good intentions, scripts constrain the development of important interactional skills and reproduce some of the very inequities they mean to disrupt. Golann presents a fascinating, sometimes painful, account of how no-excuses schools use scripts to regulate students and teachers. She shows why scripts were adopted, what purposes they serve, and where they fall short. What emerges is a complicated story of the benefits of scripts, but also their limitations, in cultivating the tools students need to navigate college and other complex social institutions—tools such as flexibility, initiative, and ease with adults. Contrasting scripts with tools, Golann raises essential questions about what constitutes cultural capital—and how this capital might be effectively taught. Illuminating and accessible, Scripting the Moves delves into the troubling realities behind current education reform and reenvisions what it takes to prepare students for long-term success.
