Paradise Found William F. Warren,2021-01-01 The Cradle of the Human Race at the North Pole is a book by

William Fairfield Warren, first published in 1885. In this book, Warren puts forth his belief that Atlantis, the Garden of Eden, Avalon, and a couple of other mythical lands were all once situated at the North Pole, noting that Homer, Vigil, and Hesiod all placed Atlas at the 'ends of the earth'. If the science of all this has now been corrected (with the discovery of plate tectonics, and the filling in of the polar maps), the books also contains reviews of the folklore of the subjects like the tree of life, the world mountain, and of course, Eden.

### **Seismic Design Aids for Nonlinear Pushover Analysis of Reinforced Concrete and Steel Bridges**

Jeffrey Ger, Franklin Y. Cheng, 2011-08-18 Nonlinear static monotonic (pushover) analysis has become a common practice in performance-based bridge seismic design. The popularity of pushover analysis is due to its ability to identify the failure modes and the design limit states of bridge piers and to provide the progressive collapse sequence of damaged bridges when subjected to major earthquakes. *Seismic Design Aids for Nonlinear Pushover Analysis of Reinforced Concrete and Steel Bridges* fills the need for a complete reference on pushover analysis for practicing engineers. This technical reference covers the pushover analysis of reinforced concrete and steel bridges with confined and unconfined concrete column members of either circular or rectangular cross sections as well as steel members of standard shapes. It provides step-by-step procedures for pushover analysis with various nonlinear member stiffness formulations, including: Finite segment-finite string (FSFS) Finite segment-moment curvature (FSMC) Axial load-moment interaction (PM) Constant moment ratio (CMR) Plastic hinge length (PHL)

Ranging from the simplest to the most sophisticated, the methods are suitable for engineers with varying levels of experience in nonlinear structural analysis. The authors also provide a downloadable computer program, INSTRUCT (INelastic STRUCTural Analysis of Reinforced-Concrete and Steel Structures), that allows readers to perform their own pushover analyses. Numerous real-world examples demonstrate the accuracy of analytical prediction by comparing numerical results with full- or large-scale test results. A useful reference for researchers and engineers working in structural engineering, this book also offers an organized collection of nonlinear pushover analysis applications for students.

Euclidean Distance Geometry Leo Liberti, Carlile Lavor, 2017-09-20 This textbook, the first of its kind, presents the fundamentals of distance geometry: theory, useful methodologies for obtaining solutions, and real world applications. Concise proofs are given and step-by-step algorithms for solving fundamental problems efficiently and precisely are presented in Mathematica®, enabling the reader to experiment with concepts and methods as they are introduced. Descriptive graphics, examples, and problems, accompany the real gems of the text, namely the applications in visualization of graphs, localization of sensor networks, protein conformation from distance data, clock synchronization protocols, robotics, and control of unmanned underwater vehicles, to name several. Aimed at

intermediate undergraduates, beginning graduate students, researchers, and practitioners, the reader with a basic knowledge of linear algebra will gain an understanding of the basic theories of distance geometry and why they work in real life.
