**Reinventing Environmental Regulation** Alfred A. Professor Marcus, Donald A. Professor Geffen, Ken Professor Sexton, 2010-09-30 Project XL (eXcellence and Leadership) was the flagship effort by the Clinton administration for 'cleaner, cheaper, and smarter' regulation. Under Project XL, business promised better performance in exchange for a regulatory approach focused more on results than means, with the Environmental Protection Agency (EPA) measuring pollution reduction across rather than at individual sources within a facility. Reinventing Environmental Regulation is a compelling account of the breakdown in negotiations to implement Project XL at a tape manufacturing plant of 3M, a company widely recognized as environmentally progressive. Marcus, Geffen, and Sexton discuss the conflicting goals of participants, the influences of personality and organizational culture, and complications caused by changes in 3M's external business environment. They compare the 3M case with EPA negotiations involving Intel, Merck, and Weyerhaeuser, finding similarly contentious, though less fatal disagreements about the meaning of 'superior environmental performance.' In common with other recent proposals, Project XL emphasized cooperative, flexible regulatory approaches. Reinventing Environmental Regulation demonstrates the difficulty of putting these appealing ideas into practice, while offering encouragement for continued innovations.

**Project XL**, 1999

Dysfunction Dennis McConaghy, 2017-01-21 #1 Calgary Herald Bestseller An investigation of the history and demise of the most controversial North American energy infrastructure project. In 2015, President Barack Obama denied approval for TransCanada's Keystone XL pipeline, which would have carried crude oil from the Canadian oil sands to the U.S. Gulf Coast, providing great economic benefit to Canada. Over seven years of regulatory process, environmental activism, and media attention, the project had become infamous, a cause célèbre for North America's ENGO movement and a test of Obama's bona fides in the face of global climate change risk. As one of TransCanada's senior executive group, Dennis McConaghy provides an insider's perspective of Keystone XL's history and demise. How did this routine infrastructure acquire iconic status? Why couldn't government and industry find some accommodation to salvage the project? And most importantly, what must Canada learn from Keystone XL's demise? Can the country find common ground between economic value and credible carbon policy?

**Pipeline Politics** Madelon L. Finkel, 2018-09-14 An essential review of the history, benefits, limitations, failures, and politics of pipelines, with a core focus on potential harms to environmental and human health. The United States holds the world record of having the largest network of energy pipelines, with more than 2.4 million miles of pipeline transporting oil or natural gas. Russia, China, and Canada as well as many other countries also have extensive pipelines. How safe is this means of transport, and is there a potential harm to the environment and human health? In

this text, professor Madelon L. Finkel presents an essential and clearly-stated review of the pros and cons of transporting oil and natural gas by pipeline. Finkel dispels myths, inaccuracies, and misconceptions and highlights the potential dangers that must be considered in any country's energy policy. *Pipeline Politics: Assessing the Benefits and Harms of Energy Policy* provides a broad and accessible analysis of pipelines, from their history and safety to their politics and risks. Finkel examines the benefits and costs of pipelines in parallel as well as issues of environmental justice; the fairness of treatment of the people affected; and the development, implementation, and enforcement of pipeline laws, regulations, and policies.

**American Environmental Policy, updated and expanded edition** Christopher Mcgrory Klyza, David J. Sousa, 2013-08-30 An updated investigation of alternate pathways for American environmental policymaking made necessary by legislative gridlock. The “golden era” of American environmental lawmaking in the 1960s and 1970s saw twenty-two pieces of major environmental legislation (including the Clean Air Act, the Clean Water Act, and the Endangered Species Act) passed by bipartisan majorities in Congress and signed into law by presidents of both parties. But since then partisanship, the dramatic movement of Republicans to the right, and political brinksmanship have led to legislative gridlock on environmental issues. In this book, Christopher Klyza and David Sousa argue that the longstanding legislative stalemate at the national level has forced environmental policymaking onto other pathways. Klyza and Sousa identify and analyze five alternative policy paths, which they illustrate with case studies from 1990 to the present: “appropriations politics” in Congress; executive authority; the role of the courts; “next-generation” collaborative experiments; and policymaking at the state

and local levels. This updated edition features a new chapter discussing environmental policy developments from 2006 to 2012, including intensifying partisanship on the environment, the failure of Congress to pass climate legislation, the ramifications of *Massachusetts v. EPA*, and other Obama administration executive actions (some of which have reversed Bush administration executive actions). Yet, they argue, despite legislative gridlock, the legacy of 1960s and 1970s policies has created an enduring “green state” rooted in statutes, bureaucratic routines, and public expectations.

*Environmental Contracts: Comparative Approaches to Regulatory Innovation in the United States and Europe* Eric W. Orts, Kurt Deketelaere, 2001-03-20 Environmental regulation has come of age in recent decades as the blunt methods of command-and-control have been subjected to trenchant criticism from both economists and lawyers in the United States and Europe. As a result of this intellectual development, as well as continuing and increasing severity of environmental problems, there is a need for fresh thinking about regulatory methods that are rational from both economic and legal points of view. This book focuses on the viability of one particular regulatory innovation--the use of agreements or contracts for environmental regulation--as it has been practised in the United States and Europe. The various contributions explore the general idea that certain kinds of environmental problems may best be addressed through contracts among interested parties, including representatives of various levels of government, business, local community and employment representatives, and public interest groups. The parties get together to discuss a particular problem and then agree to

an agreement or contract designed to address key issues and interests. At least in some situations, this approach may yield greater flexibility, stronger commitment, and more creative outcomes than traditional command-and-control regulation. Experiments in the use of environmental contracts have begun on both sides of the Atlantic, a fact which makes the comparative study offered here especially timely and valuable.

Saturation Melody Jue, Rafico Ruiz, 2021-08-23 Bringing together media studies and environmental humanities, the contributors to *Saturation* develop saturation as a heuristic to analyze phenomena in which the elements involved are difficult or impossible to separate. In ordinary language, saturation describes the condition of being thoroughly soaked, while in chemistry it is the threshold at which something can be maximally dissolved or absorbed in a solution. Contributors to this collection expand notions of saturation beyond water to consider saturation in sound, infrastructure, media, Big Data, capitalism, and visual culture. Essays include analyses of the thresholds of HIV detectability in bloodwork, militarism's saturation of oceans, and the deleterious effects of the saturation of cellphone and wi-fi signals into the human body. By channeling saturation to explore the relationship between media, the environment, technology, capital, and the legacies of settler colonialism, *Saturation* illuminates how elements, the natural world, and anthropogenic infrastructures, politics, and processes exist in and through each other.

**Applications of Power Electronics** Frede

Blaabjerg,Tomislav Dragicevic,Pooya Davari,2019-06-24

Power electronics technology is still an emerging technology, and it has found its way into many applications, from renewable energy generation (i.e., wind power and solar power) to electrical vehicles (EVs), biomedical devices, and small appliances, such as laptop chargers. In the near future, electrical energy will be provided and handled by power electronics and consumed through power electronics; this not only will intensify the role of power electronics technology in power conversion processes, but also implies that power systems are undergoing a paradigm shift, from centralized distribution to distributed generation. Today, more than 1000 GW of renewable energy generation sources (photovoltaic (PV) and wind) have been installed, all of which are handled by power electronics technology. The main aim of this book is to highlight and address recent breakthroughs in the range of emerging applications in power electronics and in harmonic and electromagnetic interference (EMI) issues at device and system levels as discussed in robust and reliable power electronics technologies, including fault prognosis and diagnosis technique stability of grid-connected converters and smart control of power electronics in devices, microgrids, and at system levels.

*Advances in Wood Composites* Antonios N.

Papadopoulos,2020-04-17 Wood composites have shown very good performance, and substantial service lives when correctly specified for the exposure risks present. Selection of an appropriate product for the job should be accompanied by decisions about the appropriate protection, whether this is by design, by preservative treatment or by wood modification techniques. This Special Issue, *Advances in Wood Composites* presents recent progress in enhancing and refining the performance and properties of wood

composites by chemical and thermal modification and the application of smart nanomaterials, which have made them a particular area of interest for researchers. In addition, it reviews some important aspects in the field of wood composites, with particular focus on their materials, applications, and engineering and scientific advances, including solutions inspired biomimetrically by the structure of wood and wood composites. This Special Issue, with a collection of 13 original contributions, provides selected examples of recent Advances in Wood Composites

### *To Be A Water Protector Winona*

LaDuke,2020-12-01T00:00:00Z Winona LaDuke is a leader in cultural-based sustainable development strategies, renewable energy, sustainable food systems and Indigenous rights. Her new book, *To Be a Water Protector: Rise of the Wiindigoo Slayers*, is an expansive, provocative engagement with issues that have been central to her many years of activism. LaDuke honours Mother Earth and her teachings while detailing global, Indigenous-led opposition to the enslavement and exploitation of the land and water. She discusses several elements of a New Green Economy and outlines the lessons we can take from activists outside the US and Canada. In her unique way of storytelling, Winona LaDuke is inspiring, always a teacher and an utterly fearless activist, writer and speaker. Winona LaDuke is an Anishinaabekwe (Ojibwe) enrolled member of the Mississippi Band Anishinaabeg who lives and works on the White Earth Reservation in Northern Minnesota. She is executive director of Honor the Earth, a national Native advocacy and environmental organization. Her work at the White Earth Land Recovery Project spans thirty years of legal, policy and community development work, including the creation of one of the first tribal land trusts in the country. LaDuke has testified at the United Nations, US

Congress and state hearings and is an expert witness on economics and the environment. She is the author of numerous acclaimed articles and books.
