Research in the Social Scientific Study of Religion, Volume 30 Ralph W. Hood,Sariya Cheruvallil-Contractor,2019-12-16 The 30th volume of Research in the Social Scientific Study of Religion consists of two special sections, as well as two separate empirical studies on attachment and daily spiritual practices. The first special section deals with the social scientific study of religion in Indonesia. Indonesia is a predominantly Muslim country whose history and contemporary involvement in the study of religion is explored from both sociological and psychological perspectives. The second special section is on the Pope Francis effect: the challenges of modernization in the Catholic church and the global impact of Pope Francis. While its focus is mainly on the Catholic religion, the internal dynamics and geopolitics explored apply more broadly.

Neuroimmunology Research Focus Paulo V. Broglio,2007 Neuroimmunology is a rapidly-growing branch of biomedical science that studies of all aspects of the interactions between the immune system and nervous system. It deals with, among other things, the physiological functioning of the neuroimmune system in states of both health and disease; malfunctions of the neuroimmune system in disorders (autoimmune diseases, hypersensitivities, immune deficiency), the physical, chemical and physiological characteristics of the components of the neuroimmune system in vitro, in situ, and in vivo. Despite the brain's status as an immune privileged site, an extensive bi-directional communication takes place between the nervous and the immune system in both health and disease. Immune cells and neuroimmune molecules such as cytokines, chemokines, and growth factors modulate brain function through multiple signalling pathways throughout the lifespan. Immunological, physiological and psychological stressors engage cytokines and other immune molecules as mediators of interactions with neuroendocrine, neuropeptide, and neurotransmitter systems. For example, brain cytokine levels increase following stress exposure, while treatments designed to alleviate stress reverse this effect. This book presents leading research in the field.
