Chinese Global Exploration In The Pre-columbian Era: Evidence From An Ancient World Map Sheng-wei Wang, 2023-10-16 How early did the Chinese explore the world? Did the Treasure Fleets, led by Admiral Zheng He, discover many parts of the world before Christopher Columbus? While it is known that Christopher Columbus discovered America and Europe ushered in the Age of Discovery, there is an ongoing debate on the 'unknown' areas depicted in Western maps from the period and earlier. There is agreement among scholars that certain areas seem to have been mapped out prior to the arrival of Western explorers. Chinese Global Exploration in the Pre-Columbian Era: Evidence from an Ancient World Map analyses the world's first modern map — known as Kunyu Wanguo Quantu (KWQ) 坤輿萬國全圖 in Chinese, translated as the 'Complete Geographical Map of All Kingdoms of the World' to demonstrate evidence of Chinese global exploration in the Pre-Columbian era. The map of concern was first printed by Italian missionary, Matteo Ricci in 1602, and has been purported to be of entirely European origin, based on Ricci's former maps which he had brought to China in 1582. This book, thus, seeks to be transformational in presenting essential new insights on Pre-Columbian world history and Chinese global exploration, moving away from the norm of the studies of geography and cartography by:

Rule Interchange and Applications Adrian Paschke, Guido Governatori, John Hall, 2009-11-04 The 2009 International Symposium on Rule Interchange and Applications (RuleML 2009), collocated in Las Vegas, Nevada, with the 12th International Business Rules Forum, was the premier place to meet and to exchange ideas from all ?elds of rules technologies. The aims of RuleML 2009 were both to present new and interesting research results and to show successfully deployed rule-based applications. This annual symposium is the ?agship event of the Rule Markup and Modeling Initiative (RuleML). The RuleML Initiative (www.ruleml.org) is a non-profit umbrella organization of several technical groups organized by representatives from academia, industry and public sectors working on rule technologies and applications. Its aim is to promote the study, research and application of rules in heterogeneous distributed environments such as the Web. RuleML maintains effective links with other major international societies and acts as intermediary between various ‘specialized’ rule vendors, applications, industrial and academic research groups, as well as standardization efforts from, for example, W3C, OMG, and OASIS. To emphasize

the importance of rule standards RuleML 2009 featured, besides a number of tutorials on various rule aspects, a tutorial and a workshop dedicated to the newly released W3C Rule Interchange Format (RIF).

Agents and Peer-to-Peer Computing Gianluca Moro, Sonia Bergamaschi, Karl Aberer, 2005-10-27 Peer-to-peer (P2P) computing is attracting enormous media attention, spurred by the popularity of file sharing systems such as Napster, Gnutella, and Morpheus. The peers are autonomous, or as some call them, first-class citizens. P2P networks are emerging as a new distributed computing paradigm for their potential to harness the computing power of the hosts composing the network and make their under-utilized resources available to others. Although researchers working on distributed computing, multiagent systems, databases and networks have been using similar concepts for a long time, it is only recently that papers motivated by the current P2P paradigm have started appearing in high-quality conferences and workshops. Research in agent systems in particular appears to be most relevant because, since their inception, multiagent systems have always been thought of as networks of peers. The multiagent paradigm can thus be superimposed on the P2P architecture, where agents embody the description of the task environments, the decision-support

capabilities, the collective behavior, and the interaction protocols of each peer. The emphasis in this context on decentralization, user autonomy, ease and speed of growth that gives P2P its advantages also leads to significant potential problems. Most prominent among these problems are coordination, the ability of an agent to make decisions on its own actions in the context of activities of other agents, and scalability, the value of the P2P systems lies in how well they scale along several dimensions, including complexity, heterogeneity of peers, robustness, traffic redistribution, and so on. This volume presents the fully revised papers presented at the Third International Workshop on Agents and Peer-to-Peer Computing, AP2PC 2004, held in New York City on July 19, 2004 in the context of the Third International Joint Conference on Autonomous Agents and Multi-Agent Systems (AAMAS 2004). The volume is organized in topical sections on P2P networks and search performance, emergent communities and social behaviours, semantic integration, mobile P2P systems, adaptive systems, agent-based resource discovery, as well as trust and reputation.

Latin America and the Global Cold War Thomas C. Field Jr., Stella Krepp, Vanni Pettinà, 2020-04-08
Latin America and the Global Cold War analyzes more than a dozen of Latin America's forgotten encounters with Africa, Asia, and the Communist world, and by placing the region in meaningful dialogue with the wider Global South, this volume produces the first truly global history of contemporary Latin America. It uncovers a multitude of overlapping and sometimes conflicting iterations of Third Worldist

movements in Latin America, and offers insights for better understanding the region's past, as well as its possible futures, challenging us to consider how the Global Cold War continues to inform Latin America's ongoing political struggles. Contributors: Miguel Serra Coelho, Thomas C. Field Jr., Sarah Foss, Michelle Getchell, Eric Gettig, Alan McPherson, Stella Krepp, Eline van Ommen, Eugenia Palieraki, Vanni Pettina, Tobias Rupprecht, David M. K. Sheinin, Christy Thornton, Miriam Elizabeth Villanueva, and Odd Arne Westad.
