Adobe Dreamweaver CS3 ,2008 Dreamweaver is the standard by which site designers and managers handle the many components required to run today's typical web presence. The Portfolio Series addresses this powerful tool the same way it does other Creative Suite applications -- the way one has to in the real world of design and site management. Purely project-based, the book offers eight hands-on, step-by-step assignments exactly as they would be handed to someone in the field. Each assignment addresses workflow, task, and process requirements, finishing with a site that works the way it's supposed to. The title provides self-learners, interested readers, students, and professional instructors detailed instructions on how to master the application.

Flash XML Applications Joachim Bernhard Schnier, 2007-10-01 Add seamless, interactive, user-controlled delivery to your Flash applications. This book builds upon your understanding of basic ActionScript (AS) syntax with the foundational skills that you need to use XML in Flash applications and AS2 or AS3 to migrate your existing applications. Beginning with an introduction to XML, XML parsing methods, and a short introduction to AS2 you learn how to create a universal XML load/onload Class as well as a universal XHTML parser. Then you learn how to use Components using XML as the data source, including the menu, menubar, datagrid and tree component. Finally, a tutorial project-the design and development of a Real Estate Web site that contains an XML search engine-pulls it all together with hands-on experience. All the applications use XML as the data source and are written as class files. Select parts of the Real Estate Web site are redeveloped in AS3 for purposes of illustration. The new XML class is presented and specific code examples demonstrate techniques to apply methods and use properties. Particular attention is paid to the differences between AS2 and AS3 and how to effectively transition from one AS version to the other. The downloadable resources contain code for all of the properties and methods of the AS2, AS3, and XML class examples. Components for the Real Estate Web site project are also provided.

XML and Web Technologies for Data Sciences with R Deborah Nolan, Duncan Temple Lang, 2013-11-29 Web technologies are increasingly relevant to scientists working with data, for both accessing data and creating rich dynamic and interactive displays. The XML and JSON data formats are widely used in Web services, regular Web pages and JavaScript code, and visualization formats such as SVG and KML for Google Earth and Google Maps. In addition, scientists use HTTP and other network protocols to scrape data from Web pages, access REST and SOAP Web Services,

and interact with NoSQL databases and text search applications. This book provides a practical hands-on introduction to these technologies, including high-level functions the authors have developed for data scientists. It describes strategies and approaches for extracting data from HTML, XML, and JSON formats and how to programmatically access data from the Web. Along with these general skills, the authors illustrate several applications that are relevant to data scientists, such as reading and writing spreadsheet documents both locally and via Google Docs, creating interactive and dynamic visualizations, displaying spatial-temporal displays with Google Earth, and generating code from descriptions of data structures to read and write data. These topics demonstrate the rich possibilities and opportunities to do new things with these modern technologies. The book contains many examples and case-studies that readers can use directly and adapt to their own work. The authors have focused on the integration of these technologies with the R statistical computing environment. However, the ideas and skills presented here are more general, and statisticians who use other computing environments will also find them relevant to their work. Deborah Nolan is Professor of Statistics at University of California, Berkeley. Duncan Temple Lang is Associate Professor of Statistics at University of California, Davis and has been a member of both the S and R development teams.

Accelerated Silverlight 2 Jeff Scanlon, 2008-11-23 Accelerated Silverlight 2 will get you up to speed with version 2 of Silverlight quickly and efficiently. Author Jeff Scanlon assumes you're already comfortable with the basics of .NET coding and with Windows Presentation Foundation

(WPF), and helps you build on your existing knowledge to make your journey to Silverlight 2 proficiency as quick and painless as possible. Where coding techniques are similar to other, more established areas of .NET, he'll say so. Likewise, where there's a syntax or conceptual "gotcha" that you're existing coding habits will walk you into, he'll point that out, too. You'll find fast-track coverage of all the most important elements of the Silverlight 2 technology ranging from XAML to standard controls, from dealing with media to networking, from testing to deployment. Two fully-worked sample applications conclude your path to Silverlight 2 mastery because nothing reinforces your understanding of how concepts fit together as much as looking at finished code. The book is based on the assumption that readers will already be very comfortable with the workings of the .NET Framework. Knowledge of Expression Blend is useful, but the author doesn't assume that you're a master of it. You'll learn the Blend techniques that you need to know as you go along. By the end of the book, the author will have provided you with a sound, concise, path to mastery of Silverlight 2.

Digital Libraries Applications Edward A. Fox, Jonathan P. Leidig, 2014-03-01 Digital libraries (DLs) have evolved since their launch in 1991 into an important type of information system, with widespread application. This volume advances that trend further by describing new research and development in the DL field that builds upon the 5S (Societies, Scenarios, Spaces, Structures, Streams) framework, which is discussed in three other DL volumes in this series. While the 5S framework may be used to describe many types of information systems, and is likely to have even broader utility and appeal, we focus here on digital libraries. Drawing upon six (Akbar, Kozevitch, Leidig, Li, Murthy, Park) completed and two (Chen, Fouh) in-process dissertations, as well as the efforts of collaborating researchers, and scores of related publications, presentations, tutorials, and

reports, this book demonstrates the applicability of 5S in five digital library application areas, that also have importance in the context of the WWW, Web 2.0, and innovative information systems. By integrating surveys of the state-of-the-art, newresearch, connections with formalization, case studies, and exercises/projects, this book can serve as a textbook for those interested in computing, information, and/or library science. Chapter 1 focuses on images, explaining how they connect with information retrieval, in the context of CBIR systems. Chapter 2 gives two case studies of DLs used in education, which is one of the most common applications of digital libraries. Chapter 3 covers social networks, which are at the heart of work onWeb 2.0, explaining the construction and use of deduced graphs, that can enhance retrieval and recommendation. Chapter 4 demonstrates the value of DLs in eScience, focusing, in particular, on cyber-infrastructure for simulation. Chapter 5 surveys geospatial information in DLs, with a case study on geocoding. Given this rich content, we trust that any interested in digital libraries, or in related systems, will find this volume to be motivating, intellectually satisfying, and useful. We hope it will help move digital libraries forward into a science as well as a practice. We hope it will help build community that will address the needs of the next generation of DLs. Medical Image Computing and Computer-Assisted Intervention - MICCAI 2003 Randy E. Ellis, Terry M. Peters, 2003-10-29 The 6th International Conference on Medical Imaging and Computer-Assisted Intervention, MICCAI 2003, was held in Montr al, Qu bec, Canada at the Fairmont Queen Elizabeth Hotel during November 15-18, 2003. This was the first time the conference had been held in Canada. The proposal to host MICCAI 2003 originated from discussions within the Ontario Consortium for Image-guided Therapy and Surgery, a multi-institutional research consortium that was supported by the Government of Ontario through the Ontario Ministry of Enterprise, Opportunity and Innovation. The objective of the conference was to offer clinicians and scientists a -

rum within which to exchange ideas in this exciting and rapidly growing field. MICCAI 2003 encompassed the state of the art in computer-assisted interventions, medical robotics, and medical-image processing, attracting experts from numerous multidisciplinary professions that included clinicians and surgeons, computer scientists, medical physicists, and mechanical, electrical and biome- cal engineers. The quality and quantity of submitted papers were most impressive. For MICCAI 2003 we received a record 499 full submissions and 100 short communications. All full submissions, of 8 pages each, were reviewed by up to 5 reviewers, and the 2-page contributions were assessed by a small subcommittee of the Scientific Review Committee. All reviews were then considered by the MICCAI 2003 Program Committee, resulting in the acceptance of 206 full papers and 25 short communications. The normal mode of presentation at MICCAI 2003 was as a poster; in addition, 49 papers were chosen for oral presentation.
