In total, 1,630 papers were submitted to FGIT 2010 from 30 countries,

which includes 175 papers submitted to DTA/BSBT 2010. The submitted papers went through a rigorous reviewing process: 395 of the 1,630 papers were accepted for FGIT 2010, while 40 papers were accepted for DTA/BSBT 2010. Of the 40 papers 6 were selected for the special FGIT 2010 volume published by Springer in the LNCS series. 31 papers are published in this volume, and 3 papers were withdrawn due to technical reasons. **Indigenous Empowerment Through Co-management** Graham White,2020 Co-management boards, established under comprehensive land claims agreements, have become key players in land-use planning, wildlife management, and environmental regulation across Canada's North. This book provides a detailed account of the operation and effectiveness of these boards while addressing a central question: Have they been successful in ensuring substantial Indigenous involvement in policies affecting the land and wildlife in their traditional territories? While identifying constraints on the role Northern Indigenous peoples play in board processes, Graham White finds that overall they exercise extensive decision-making influence. These findings are provocative and offer valuable insights into our understanding of the importance of land claims boards and the role they play in the evolution of treaty federalism in Canada.--

   **Advanced Design and Manufacturing Based on STEP** Xun Xu,Andrew Yeh Ching Nee,2009-09-29 Design and manufacturing is the essential element in any product development lifecycle. Industry vendors and users have been seeking a common language to be used for the entire product development lifecycle that can describe design, manufacturing and other data pertaining to the product. Many solutions were proposed, the most successful being the Stadndard for Exchange of Product model (STEP). STEP provides a mechanism that is capable of describing product data, independent from any particular system. The nature of this description makes it suitable not only for neutral file exchange, but also as a basis for implementing, sharing and archiving product databases. ISO 10303-AP203 is the first and perhaps the most successful AP developed to exchange design data between different CAD systems. Going from geometric data (as in AP203) to features (as in AP224) represents an important step towards having the right type of data in a STEP-based CAD/CAM system. Of particular significance is the publication of STEP-NC, as an extension of STEP to NC, utilising feature-based concepts for CNC machining purposes. The aim of this book is to provide a snapshot of the recent research outcomes and implementation cases in the field of design

and manufacturing where STEP is used as the primary data representation protocol. The 20 chapters are contributed by authors from most of the top research teams in the world. These research teams are based in national research institutes, industries as well as universities.
