Lectures on Gravitation Ashok Das,2011 This book is a compilation of the lectures for a one-semester course on gravitation at the University of Rochester. Starting from a simple description of geometry, the topics are systematically developed to the big bang theory with a simple derivation of the cosmic background temperature. Several informative examples are worked out in detail as well.

The Special Theory Of Relativity For Mathematics Students Peter Lorimer,1990-07-05 One of the problems facing mathematics and physics is that mathematicians and physicists speak languages that the others find hard to understand. These notes take a fundamental part of physics, the special theory of relativity and describe it in terms that can be understood by mathematics students who have studied the two basic undergraduate topics, linear algebra and multivariable calculus. It gives a full description of the geometry of space-time and the foundations of the theory of electromagnetism in terms they are familiar with.

Electronics for Artists Simon Quellen Field,2015-02-01

Not all artists want to create static, unilluminated works to hang on a wall, and with *Electronics for Artists*, they don't have to. With today's modern technology-LEDs, servo motors, motion sensors, speakers, and more-artwork can incorporate elements of light, sound, and motion for dramatic effects. Author and educator Simon Quellen Field has developed a primer for creative individuals looking for new ways to express themselves through electronically enhanced art. Following step-by-step examples of basic circuitry and programming, even a novice reader will develop the skills necessary to enhance their works. Demonstration projects then give artists a chance to build and program a more efficient light dimmer, randomly flashing LEDs using an integrated circuit, a controlled servo motor, and more. The book even includes art projects to try, include a bouquet of glowing flowers; an LED metronome; a talking computer; Cecil, a sensile robot; and Rover, a simple wheeled robot. A variety of artistic works created by Field's students and based on these open-ended lessons are also included to provide creative sparks for the readers. For those interested in programming their circuits, Field explores the basics of Energia, a free software package, and provides simple programs to create flashing light patterns, computer controlled motors, and LCD text displays. Simon Field is the author of *Why Is Milk White?*, *Culinary Reactions*, *Why There's Antifreeze in Your Toothpaste*, and *Gonzo Gizmos*, and is the creator of the popular Web site [www.scitoys.com](http://www.scitoys.com).

*The New Hacker's Dictionary, third edition* Eric S. Raymond, 1996-10-11 This new edition of the hacker's own phenomenally successful lexicon includes more than 100 new entries and updates or revises 200 more. This new edition of the hacker's own phenomenally successful lexicon includes more than 100 new entries and updates or revises

200 more. Historically and etymologically richer than its predecessor, it supplies additional background on existing entries and clarifies the murky origins of several important jargon terms (overturning a few long-standing folk etymologies) while still retaining its high giggle value.

Sample definition hacker n. [originally, someone who makes furniture with an axe] 1. A person who enjoys exploring the details of programmable systems and how to stretch their capabilities, as opposed to most users, who prefer to learn only the minimum necessary. 2. One who programs enthusiastically (even obsessively) or who enjoys programming rather than just theorizing about programming. 3. A person capable of appreciating {hack value}. 4. A person who is good at programming quickly. 5. An expert at a particular program, or one who frequently does work using it or on it; as in 'a UNIX hacker'. (Definitions 1 through 5 are correlated, and people who fit them congregate.) 6. An expert or enthusiast of any kind. One might be an astronomy hacker, for example. 7. One who enjoys the intellectual challenge of creatively overcoming or circumventing limitations. 8. [deprecated] A malicious meddler who tries to discover sensitive information by poking around. Hence 'password hacker', 'network hacker'. The correct term is {cracker}. The term 'hacker' also tends to connote membership in the global community defined by the net (see {network, the} and {Internet address}). It also implies that the person described is seen to subscribe to some version of the hacker ethic (see {hacker ethic, the}). It is better to be described as a hacker by others than to describe oneself that way. Hackers consider themselves something of an elite (a meritocracy based on ability), though one to which new members are gladly welcome. There is thus a certain ego satisfaction to be had in identifying yourself as a hacker

(but if you claim to be one and are not, you'll quickly be labeled {bogus}). See also {wannabee}.
