Matvei Petrovich Bronstein Gennady Gorelik,Victor Ya. Frenkel,2011-09-15 The true history of physics can only be read in the life stories of those who made its progress possible. Matvei Bronstein was one of those for whom the vast territory of theoretical physics was as familiar as his own home: he worked in cosmology, nuclear physics, gravitation, semiconductors, atmospheric physics, quantum electrodynamics, astro physics and the relativistic quantum theory. Everyone who knew him was struck by his wide knowledge, far beyond the limits of his trade. This partly explains why his life was closely intertwined with the social, historical and scientific context of his time. One might doubt that during his short life Bronstein could have made truly weighty contributions to science and have become, in a sense, a symbol of his time. Unlike mathematicians and poets, physicists reach the peak of their careers after the age of thirty. His thirty years of life, however, proved enough to secure him a place in the Greater Soviet Encyclopedia. In 1967, in describing the first generation of physicists educated after the 1917 revolution, Igor Tamm referred to Bronstein as an exceptionally brilliant and promising theoretician [268].

**My Nerves Are Bad** Sana Loue,2011-06-11 Over a two-year period, author Sana Loue and her research team followed the lives of fifty-three Puerto Rican women living with severe mental illness as they coped with daily challenges in the areas of family, romantic relationships, employment, social services, substance use, and health care. The team interviewed the women and shadowed them at their homes, churches, schools, physicians' offices, family events, and other occasions in order to understand how their mental illness, their gender, their language, and their culture affected their relationships with others, their understandings of their own situations, and their hopes for themselves and their families. Sana Loue lets us see the remarkable strength of many of the women and hear in their own words about their efforts to survive, despite long histories of childhood physical and sexual abuse, partner violence, substance use, poverty, and severe mental illness. We also witness the violence that surrounds them and the HIV risk that becomes a part of their lives in their efforts to survive economically and emotionally.

*El préstamo en el español de los Estados Unidos* Eva Mendieta,1999 El presente estudio del préstamo en situaciones de contacto lingüístico propone una visión que incorpora perspectivas complementarias procedentes de la Dialectología, la Sociolingüística y el estudio del Bilingüismo. Nuestra hipótesis es que la variación que se observa en la actuación lingüística de los sujetos, tanto en cuanto al volumen total de préstamos como a su distribución en tipos, es el resultado de unos procesos armónicos y condicionados por factores tanto lingüísticos como extralingüísticos. El corpus analizado procede de entrevistas lingüísticas con adolescentes hispanos pertenecientes a las tres principales minorías etnolingüísticas de los EE.UU.: la mexicana, la cubana y la puertorriqueña.

The Fijian Language Albert J. Schütz,2019-03-31 This work is directed to those who want to learn more about the Fijian language. It is intended as a reference work, treating in detail such tropics as verb and noun classification, transitivity, the phonological hierarchy, orthography, specification, possession, subordination, and the definite article (among others). In addition, it is an attempt to fit these pieces together into a unified picture of the structure of the language.

**Statistical Mechanics and the Theory of Dynamical Systems** Nikolai Nikolaevich Bogolyubov, Nikolai Nikolaevich Bogolyubov,1992 This volume contains articles covering a wide range of current directions in modern statistical mechanics and dynamical systems theory. Scientists, researchers, and students working in mathematical physics and statistical mechanics will find this book of great interest. Among the topics covered are: phase transition problems, including superconductivity and superfluidity; methods of nonequilibrium statistical mechanics and fluctuation theory; quantum collective phenomena; superradiance; spin glasses; polaron problems; chains of Bogolyubov equations and kinetic equations; algebraic aspects of quantum-dynamical semigroups; the collective variables method; and qualitative properties of classical dynamical systems.

Contemporary Models of the Atomic Nucleus P. E. Nemirovskii,2013-10-22 Contemporary Models of the Atomic Nucleus discusses nuclear structure and properties, expounding contemporary theoretical concepts of the low-energy nuclear processes underlying in nuclear models. This book focuses on subjects such as the optical nuclear model, unified or collective model, and deuteron stripping reaction. Other topics discussed include the basic nuclear properties; shell model; theoretical analysis of the shell model; and radiative transitions and alpha-decay. The deuteron theory and the liquid drop nuclear model with its application to fission theory are also mentioned, but only briefly discussed. This publication benefits students and researchers conducting work on nuclear physics, specifically on the constituents and interactions of the atomic nucleus.

**Magnetophotonics** Mitsuteru Inoue,Miguel Levy,Alexander V. Baryshev,2013-03-26 This book merges theoretical and experimental works initiated in 1997 from consideration of periodical artificial dielectric structures comprising magneto-optical materials. Modern advances in magnetophotonics are discussed giving theoretical analyses and demonstrations of the consequences of light interaction with non-reciprocal media of various designs. This first collection of foundational works is devoted to light-to-artificial magnetic matter phenomena and related applications. The subject covers the physical background and the continuing research in the field of magnetophotonics.

*Yang-Baxter Equation in Integrable Systems* Michio Jimbo, 1990-03-01 ' This volume will be the first reference book devoted specially to the Yang-Baxter equation. The subject relates to broad areas including solvable models in statistical mechanics, factorized S matrices, quantum inverse scattering method, quantum groups, knot theory and conformal field theory. The articles assembled here cover major works from the pioneering papers to classical Yang-Baxter equation, its quantization, variety of solutions, constructions and recent generalizations to higher genus solutions. Contents: Some Exact Results for the Many-Body Problem in One Dimension with Repulsive Delta-Function Interaction (C N Yang) S matrix for the One Dimensional N-Body Problem with Repulsive or Attractive  $\delta$ -Function Interaction (C N Yang) Partition Function of the Eight-Vertex Lattice Model (R J Baxter) Solutions of the Classical Yang-Baxter Equation and Simple Lie Algebras (A A Belavin & V G Drinfel'd) Some Algebraic Structures Connected with the Yang-Baxter Equation (E K Sklyanin) Quantization of Lie Groups and Lie Algebras (L D Faddeev, N Yu Reshetikhin & L A Takhtajan) Families of Commuting Transfer Matrices in q-State Vertex Models in Non-Linear Integrable Systems – Classical Theory and Quantum Theory (J H H Perk & C L Schultz) Self-Dual Solutions of the Star-Triangle Relations in  $ZN$  Models (V A Fateev & A B Zamolodchikov) Solvable Lattice Models Related to the Vector Representation of Classical Simple Lie Algebras (M Jimbo, T Miwa & M Okado) Exactly Solvable SOS Models. II: Proof of the Star-Triangle and Combinatorial Identities (E Date et al.) New Solutions of the Star-Triangle Relations for the Chiral Potts Model (R J Baxter, J H H Perk & H Au-Yang) and other papers Readership: Physicists and mathematicians. Keywords: Yang-Baxter Equation; Star-Triangle Relation; Tetrahedron Equation; R Matrix; Classical R Matrix; Solvable Lattice Model; Factorized Scattering; Quantum Inverse Method; Quantum Groups; Lie Algebra "The collection serves a dual purpose: it provides the physicist or mathematician who works in a different field with an overview of the subject; furthermore, it provides those who work in the subject with a compendium of basic references put conveniently together in one volume." Mathematical Reviews "Thus the book gives a good survey of results in one of the hottest points of mathematical physics from the first hands." Mathematics Abstracts "The second volume is such an excellent, representative collection of articles on the very rich field centered around the Yang-Baxter equation that it should have its place on the shelves of every good library. It is also warmly recommended for people wishing to join this active research area as well as for those who just want to learn the main developments." Acta Sci. Math. (Szeged) '

**The Interaction Between Earth's Rotation and Geophysical Processes** Nikolay S. Sidorenkov, 2009-11-02 Filling an important gap in the geophysical literature at specialist level, this monograph is the only up-to-date title to

provide a link between the Earth's rotation and its atmo- and hydrosphere, including the ice masses. Starting with the Earth's motions, the text goes on to look at irregularities and the effect of atmospheric processes on the Earth's spin. Tides and seasons occupy the following sections before a discussion of the Earth-ocean-atmosphere system and the mechanical action of the atmosphere on the Earth's rotation. The whole is rounded off by an index of abbreviations and appendices with sections on related physics for better readability, plus a comprehensive bibliography for further reading. A must for geophysicists, oceanographers, glaciologists, climatologists and meteorologists alike.
