*Icons* Robin Cormack,British Museum,2007 When Matisse thus expressed his admiration for icons, upon a visit to Russia in 1911, he echoed the sentiments of viewers down the centuries. These painted panels made for Byzantine and Orthodox churches and as aids to prayers at home are perhaps the most effective and enduring form of religious art ever developed, and also perhaps one of the most mysterious. The peaceful, clear imagery found within them can be appreciated on both a religious and a secular level. This engaging book looks at icons in the context of the history of Christianity, examining all aspects of the production and power of this distinctive art form. Through numerous colour illustrations, it investigates their subject matter, showing how scenes can be identified, how the iconography developed over the centuries, and the role of portraiture. The ways in which icons were made, framed and displayed are also explored, based on an analysis of

examples from the British Museum that have been carefully studied by restorers. The Museum's entire collection of around 100 icons, unmatched in Britain, is illustrated here in colour.

*The Orchid Flora of Taiwan: A Collection of Line Drawings* Tsan-Piao Lin, 2019-12-01 The history of written records of native orchids in Taiwan began in 1857 with a British botanist. After more than 160 years of study by European, Japanese, and Taiwanese scholars and enthusiasts, the list of native orchids increased to more than 470 species, including natural hybrids and varieties. The author exerted extensive efforts to include all known species in this work and arranged them based on the order of subfamilies. Scientific names, synonyms, and relevant references are provided for each species. Many of the species are provided with additional explanations in the "note" section. The uniqueness of this book is the line drawing illustrations which emphasize the structure of the column. In total, 500 figures are presented to accompany the species descriptions. These extensive line drawings were accumulated since 1971 and were mostly drawn by the author. More than that, this book also presents the gynostemium structure of more than 380 species, including the stigma, pollinium, rostellum, and column, in high-resolution color plates.
