Copyright and the Music Marketplace United States Copyright Office,2015-12-21 The Copyright Office has previously highlighted the outmoded rules for the licensing of musical works and sound recordings as an area in significant need of reform. Moreover, the Office has underscored the need for a comprehensive approach to copyright review and revision generally. This is especially true in the case of music licensing the problems in the music marketplace need to be evaluated as a whole, rather than as isolated or individual concerns of particular stakeholders.

The Design and Engineering of Curiosity Emily Lakdawalla,2018-03-27 This book describes the most complex machine ever sent to another planet: Curiosity. It is a one-ton robot with two brains, seventeen cameras, six wheels, nuclear power, and a laser beam on its head. No one human understands how all of its systems and instruments work. This essential reference to the Curiosity mission explains the engineering behind every system on the rover, from its rocket-powered jetpack to its radioisotope thermoelectric generator to its fiendishly complex sample handling system. Its lavishly illustrated text explains how all the instruments work -- its cameras, spectrometers, sample-cooking oven, and weather station -- and describes the instruments' abilities and limitations. It tells you how the systems have functioned on Mars, and how scientists and engineers have worked around problems developed on a faraway planet: holey wheels and broken focus lasers. And it explains the grueling mission operations schedule that keeps the rover working day in and day out.

The Complete MD/PhD Applicant Guide Jonathan Sussman, Jordan Setayesh, Amitej Venapally, 2020-09-22 This book is a student reference guide book for the MD/PhD application process. It begins with an overview of the structure of a typical MD/PhD program as well as student outcomes and career choices of MD/PhD graduates. Next is an outline of the academic and extracurricular prerequisites as well as the basic components of the application itself. The authors then address the factors that MD/PhD students should consider when selecting schools to which to apply. Continuing to the main application, examples are provided of all the different essay types that MD/PhD applicants will encounter along with comments on how to address the deliberately vague and abstract prompts while tailoring the responses to the combined-degree program. Most uniquely, included is a very detailed explanation of the many types of interviews that applicants will encounter and how to prepare for them by integrating extensive personal experience and first-hand discussions with MD/PhD program leaders. Lastly, there will be a discussion on how to cope with the year-long timeline that constitutes this application process and provide guidance regarding properly responding to acceptances and waitlist offers. Written by a team of authors each experienced with the MD/PhD application, this book aids the prospective applicant with navigating this challenging process.

Free Adjuncts and Absolutes in English Bernd Kortmann, 2013-09-27 Free adjuncts and absolutes typically function as adverbial clauses which are not overtly specified for any particular adverbial relation. The book is a non-formal, corpus based study of their current use in English. Its particular focus is on a comprehensive and in-depth analysis of their semantic indeterminacy and the syntactic, semantic, and pragmatic factors that help resolve it.

Blended Learning for Inclusive and Quality Higher Education in Asia Cher Ping Lim, Charles R. Graham, 2021-02-22 This book demonstrates how blended learning improves access to and enhances the quality of higher education teaching and learning in Asian universities. It first discusses how leading universities in the region drive and support blended learning at the institutional level to enhance student learning engagement and outcomes. It then examines 10 effective implementations and lessons learned of blended learning practices across different disciplinary courses and programmes (humanities and language, science and engineering, social science and education, and others) in the region. The chapters in this book provide an overview of the opportunities and challenges of blended learning for improved access and enhanced quality of higher education, and offer insights into the promising blended learning policies and practices in Asian universities.

Manga for the Beginner Christopher Hart, 2013-06-26 Got manga? Christopher Hart's got manga, and he wants to share it with all his millions of readers—especially the beginners. With *Manga for the Beginner*, anyone who can hold a pencil can start drawing great manga characters right away. Using his signature step-by-step style, Hart shows how to draw the basic manga head and body, eyes, bodies, fashion, and more. Then he goes way beyond most beginner titles, exploring dynamic action poses, special effects, light and shading, perspective, popular manga types such as animals, anthros, and shoujo and shounen characters. By the end of this big book, the new artist is ready to draw dramatic story sequences full of movement and life.

Turn-taking in human communicative interaction Judith Holler, Robin H. Kendrick, Marisa Casillas, 2016-05-09 The core use of language is in face-to-face conversation. This is characterized by rapid turn-taking. This turn-taking poses a number central puzzles for the psychology of language. Consider, for example, that in large corpora the gap between turns is on the order of 100 to 300 ms, but the latencies involved in language production require minimally between 600 ms (for a single word) or 1500 ms (for as simple sentence). This implies that participants in conversation are predicting the ends of the incoming turn and preparing in advance. But how is this done? What aspects of this prediction are done when? What happens when

the prediction is wrong? What stops participants coming in too early? If the system is running on prediction, why is there consistently a mode of 100 to 300 ms in response time? The timing puzzle raises further puzzles: it seems that comprehension must run parallel with the preparation for production, but it has been presumed that there are strict cognitive limitations on more than one central process running at a time. How is this bottleneck overcome? Far from being 'easy' as some psychologists have suggested, conversation may be one of the most demanding cognitive tasks in our everyday lives. Further questions naturally arise: how do children learn to master this demanding task, and what is the developmental trajectory in this domain? Research shows that aspects of turn-taking, such as its timing, are remarkably stable across languages and cultures, but the word order of languages varies enormously. How then does prediction of the incoming turn work when the verb (often the informational nugget in a clause) is at the end? Conversely, how can production work fast enough in languages that have the verb at the beginning, thereby requiring early planning of the whole clause? What happens when one changes modality, as in sign languages – with the loss of channel constraints is turn-taking much freer? And what about face-to-face communication amongst hearing individuals – do gestures, gaze, and other body behaviors facilitate turn-taking? One can also ask the phylogenetic question: how did such a system evolve? There seem to be parallels (analogies) in duetting bird species, and in a variety of monkey species, but there is little evidence of anything like this among the great apes. All this constitutes a neglected set of problems at the heart of the psychology of language and of the language sciences. This Research Topic contributes to advancing our understanding of these problems by summarizing recent work from psycholinguists, developmental psychologists, students of dialog and conversation analysis, linguists, phoneticians, and comparative ethologists.
